*Free Logic* Karel Lambert,2002-10-31 Free logic is an important field of philosophical logic that first appeared in the 1950s. J. Karel Lambert was one of its founders and coined the term itself. The essays in this collection (written over a period of 40 years) explore the philosophical foundations of free logic and its application to areas as diverse as the philosophy of religion and computer science. Amongst the applications on offer are those to the analysis of existence statements, to definite descriptions and to partial functions. The volume contains a proof that free logics of any kind are non-extensional and then uses that proof to show that Quine's theory of predication and referential transparency must fail. The purpose of this collection is to bring an important body of work to the attention of a new generation of professional philosophers, computer scientists and mathematicians.

**Antisemitic Elements in the Critique of Capitalism in German Culture, 1850-1933** Matthew Lange,2007 This volume examines selected works of German literature from Gustav Freytag to Joseph Goebbels in relation to ethical, socio-economic, and political texts from the economic «take off» period in the middle of the nineteenth century up to the rise of National Socialism and investigates two aspects of anti-Semitic anti-capitalistic representations contained therein. First it traces how the Jews gained the dubious distinction of being the inventors, even embodiment, of capitalism and elaborates on negative traits assigned to both of them. Second it examines how representations of specifically Jewish capitalists were instrumentalized both to discredit laissez faire and simultaneously to assist in the definition of a specifically «German» socio-economic ethos.
