Charts for Estimating Tail-rotor Contribution to Helicopter Directional Stability and Control in Low-speed Flight Kenneth B. Amer, Alfred Gessow, 1954 The use of the charts and equations for tail-rotor design studies is illustrated. Comparisons between theoretical and experimental results are presented.

Charts for Estimation of the Characteristics of a Helicopter Rotor in Forward Flight F. J. Bailey, F. B. Gustafson, 1944 Charts showing the rotor profile drag-lift ratio are presented for a helicopter rotor operating in forward flight and having hinged rectangular untwisted blades. Charts are given for a range of power input covering glides, level flight, and moderate rates of climb. Each chart expresses the relation between the lift and the profile-drag characteristics of the rotor for various combinations of pitch angle, tip-speed ratio, and solidity for a particular value of a parameter representing the shaft power output.

Charts for Estimating Rotor-blade Flapping Motion of High-performance Helicopters Robert J. Tapscott, Alfred Gessow, 1956 Theoretically derived charts showing steady-state and first- and second-harmonic flapping coefficients are presented for helicopter rotors having hinged rectangular blades with a linear twist of 0, -8, and -16 degrees. The charts, showing the rotor flapping coefficients for combinations of inflow ratio and blade pitch angle, are presented for tip-speed ratios ranging from 0.05 to 0.50.

Understanding Aeronautical Charts Terry T. Lankford, 1992-01-01 Filled with practical applications for beginning & veteran pilots, Understanding Aeronautical Charts provides clear, easy-to-follow instruction in a subject many pilots find complicated. With an emphasis on their use for flight planning purposes, Lankford covers all types of charts, including those for VFR, IFR, SID, STAR, Loran, & helicopter flights. In describing his proven system for interpreting & using charts, the author examines the limitations & shortcomings of charts in flight planning & offers helpful tips & techniques for working around them. Lankford includes material on all the new airspace categories proposed by the FAA.

Evaluation of a Moving-graph Instrument Display for Landing Approaches with a Helicopter R. Earl Dunham,1970 A flight-test evaluation has been conducted of an instrument display for VTOL all-weather landing which included a moving-graph pictorial presentation for slope guidance. The instrument display included a moving-map presentation for course guidance, a large (4.5-inch-diameter (11.43-cm)) attitude indicator, and moving-pointer airspeed and vertical-speed indicators. The tests were conducted under simulated instrument flight rules conditions in landing approaches with a helicopter along a 6 (degrees) glide slope at an air-speed of 30 knots.

Charts Showing Relations Among Primary Aerodynamic Variables for Helicopter-performance Estimation Herbert W. Talkin,1947 In order to facilitate solutions of the general problems of helicopter selection, the aerodynamic performance of rotors is presented in the form of charts showing relations between primary design and performance variables. By the use of conventional helicopter theory, certain variables are plotted and other variables are considered fixed. Charts constructed in such a manner show typical results, trends, and limits of helicopter performance. Performance conditions considered include hovering, horizontal flight, climb, and ceiling. Special problems discussed include vertical climb and the use of rotor-speed-reduction gears for hovering.
