Being with Data Nathaniel Tkacz,2022-06-01 Once the rarified stuff of scientists and statisticians, data are now at the heart of our global digital economy, transforming everything from how we perceive the value of a professional athlete to the intelligence gathering activities of governments. We are told that the right data can turn an election, help predict crime, improve our businesses, our health and our capacity to make decisions. Beginning with a simple question - how do most people encounter and experience data? - Nathaniel Tkacz sets out on a path at odds with much of the contemporary discussion about data. When we encounter data, he contends, it is often in highly routinised ways, through formatted displays and for specific cognitive tasks. What data are and can do is largely a matter of how they are formatted. To understand our 'datafied' societies, we need to turn our attention to data's formats and the powers of formatting. This book offers an account of one such format: the dashboard. From their first

appearance with the horse and carriage, Tkacz guides readers on the historical development of this format. Through analyses of car dashboards, early managerial dashboards, and the gradual emergence of dashboards as a computer display technology, Tkacz shows how today's digital dashboards came to be, and how their cultural history conditions the present. Highly original and wide-ranging, this book will change how you think about data.

The Wind Merchant Ryan Dunlap, The skies are full of floating cities, sky pirates, and airships collecting secrets on the wind. But whatever you do, don't fly beneath the clouds. Out of the ashes of The Clockwork War, mankind rose above the clouds to begin anew with the Atmo Project, a group of twenty-one flying cities running off the overabundant resource that destroyed the world below. Nearly a century later, one-third of the cities have fallen from disrepair or sky pirate attacks. When fledgling wind merchant Ras Veir inadvertently disrupts the natural fuel source keeping his home city of Verdant aloft, he must fly his airship clear across Atmo to right his wrong. But he can't do it alone, and adventure-minded girl next door Calista Tourbillon wouldn't dream to pass up an opportunity to escape Verdant with her childhood friend, especially if it means tangling with dread sky pirates, clockwork automatons, and the remnants of the long-forgotten world beneath the clouds to retrieve a rare element on the wind from a place known only as The Wild.
