Quantity and Prosodic Asymmetries in Alemannic Astrid Kraehenmann,2009-04-07 The comprehensive analysis of the segmental and metrical system of the Swiss German dialect of Thurgovian provides a significant contribution to both phonetic and phonological theory. Based on the author's original fieldwork and experimental investigations, it is the first in-depth study of this area, tracing it back also to its Old High German roots, particularly that of the dialect of Notker. Quantity alternations - notably word-initial long/short consonantal alternations - asymmetric neutralization of phonetic-phonological contrasts, stress and weight are most prominent among the theoretical issues on which Thurgovian phonology is brought to bear.

Emerging Drugs and Targets for Parkinson's Disease Ana Martinez,Carmen Gil,2013-07-18 Affecting over 1.5 million people across the world, Parkinson's disease is a progressive neurological condition characterized, in part, by the loss of dopaminergic neurons in the substantia nigra pars compacta. It affects 1.5% of the global population over 65 years of age. As life expectancy is increasing, over the next few years the number of patients with Parkinson's disease will grow exponentially. To date, there are no available treatments that are capable of curing Parkinson's disease, and the current goal of therapy, dopamine replacement strategies, is to reduce symptoms. After several years of disease progression, treatment is complicated by the onset of motor fluctuations and dyskinesias. This information reveals the great importance and social need of finding an effective therapeutic intervention for Parkinson's disease. This exemplary new book reviews some of the most outstanding examples of new drugs currently in pharmaceutical development or new targets currently undergoing the validation process to try to reach the Parkinson's drug market in the next few years as potential disease modifying drugs. Providing up to date and comprehensive coverage, this book is essential reading for researchers working in academia and industry in any aspect of medicinal chemistry or drug discovery.
