Herd Health O. M. Radostits, K. E. Leslie, J. Fetrow, 1994 This work describes the role of the veterinarian in the management of animal health and production in dairy and beef cattle herds, beef feedlots, swine herds and sheep flocks. It acquaints veterinarians with economical programmes that allow for the most effective production of healthy livestock, resulting in the best-quality food products, and provides a framework for undergraduate veterinary student courses in animal health and production management. The book includes principles for the control of infectious diseases.

Handbook of Livestock Management Richard A. Battaglia, 2007 Discusses a wide range of species and topics, showing step-by-step how to perform the skills and techniques essential for those in animal management. Taking a hands-on approach, it reflects the author's authoritative experience and emphasizes how to maintain and maximize an animal's well-being and productivity. Over 800 illustrations, external parts and skeletal drawings, and new photographs offer readers a close look at each species and each livestock management technique. Features chapters on beef cattle, dairy cattle, swine, horses, sheep, goats, poultry, livestock restraint and herd health. Covers all aspects of each species from breeding and conception through their complete lifecycle. Recommends techniques that are best for both the livestock manager and the animal. Provides cautionary notes at appropriate danger points with each step-by-step procedure. Follows a predictable format that includes an

introduction to each technique, lists of necessary equipment, a discussion of required restraint, cautionary notes at appropriate danger points, a description of the normal recovery sequence, and a discussion of postprocedural management. Excellent for those involved in livestock management.

Herd Health O. M. Radostits, 2001 This text offers integrated coverage of all aspects of herd animals - dairy and beef cattle, calves, sheep, and swine. It provides strategies for herd health management and gives the basic knowledge for production-oriented animal health management.

Running a Small Beef Herd Fiona Baker, 2008 Running a Small Beef Herd provides an introduction to beef production for those about to enter the industry and is an ongoing reference for anyone managing a small herd of beef cattle on their property. Fundamental considerations such as the economics of

beef production and the selection of a suitable beef enterprise to match a particular property and level of experience are covered. It considers various systems suitable for a small beef operation: steer fattening, cow and calf systems, foster calves and multiple suckling, and lot feeding. It offers practical advice on buying cattle, marketing methods for particular types of cattle and specifications for markets such as domestic supermarket, butcher shops and hotels, Japan, Korea and US manufacturing. Cattle handling and carrying out necessary husbandry practices such as castration and vaccination, herd health, reproductive management, nutrition, carrying capacity, supplementary feeding through normal feed shortages or drought are also explored. Facilities such as fences, yards and water supply, which have a large impact on ease of management, are discussed in detail. Various breeds of cattle including the suitability of newer breeds such as lowlines are discussed and comparative ratings of economic traits are given. The book includes a calendar of operations to assist with timing and coordination of all the activities associated with breeding and raising cattle in southern Australia. This new edition completely updates the financial and marketing information and expands on the systems of beef production, breeds, breed management, stock handling, supplementary feeding and drought management. It updates and expands on the NLIS (ear tagging) requirements, and includes a chapter on the importance of soil health and fertility.--Provided by publisher.

Animal Husbandry in Ancient Israel Aharon Sasson, 2016-04-08 Animals have been used to human advantage for thousands of years. 'Animal Husbandry in Ancient Israel' presents an analysis of caprines and cattle husbandry in the Southern Levantine Bronze and Iron Age. The book employs key methodological approaches - comparative analysis, taphonomy, Geographic Information System spatial analysis, and ethnographic studies - to challenge prevalent views on the Southern Levantine ancient economy. 'Animal Husbandry in Ancient Israel' argues that the key concern of nomadic, rural and urban populations was survival - the common household maintained a self-sufficient economy - rather than profit, specialization or trade. The book will be of value to all those interested in the dynamic relationship between humans and animals in ancient Israel.

Air Emissions from Animal Feeding Operations National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and

Toxicology, Board on Agriculture and Natural Resources, Committee on Animal Nutrition, Ad Hoc Committee on Air Emissions from Animal Feeding Operations, 2003-04-07 Air Emissions from Animal Feeding Operations: Current Knowledge, Future Needs discusses the need for the U.S. Environmental Protection Agency to implement a new method for estimating the amount of ammonia, nitrous oxide, methane, and other pollutants emitted from livestock and poultry farms, and for determining how these emissions are dispersed in the atmosphere. The committee calls for the EPA and the U.S. Department of Agriculture to establish a joint council to coordinate and oversee short- and long-term research to estimate emissions from animal feeding operations accurately and to develop mitigation strategies. Their recommendation was for the joint council to focus its efforts first on those pollutants that pose the greatest risk to the environment and public health.

Herd Health and Production Management in Dairy Practice Arie Brand, Ynte H. Schukken, 1996 This text aims to teach students, practitioners and farm advisors how to give management support to the dairy farmer in order to optimize the health, productivity and welfare of his herd. The book covers management practices and farm conditions which have both positive and negative influences on these aspects, rather than a more traditional focus on specific diseases. The core element in this methodology is the protocol. In order to illustrate the standard protocol the practitioner and farm advisor are taken through a farm visit, during which operational and problem-solving

issues are addressed. These issues include: nutrition; health care; reproduction; milk production; replacement rearing; and farm economics.

Cow Talk Rebecca Doyle, John Moran, 2015-02-03 The aim of this manual is to improve the welfare of dairy cattle in tropical developing countries, and by doing so, optimise cow and herd performance. It gives the stockmen and farmers directly concerned with the cattle a better understanding of animal behaviour and the ways cattle communicate their comfort or distress. The book

discusses normal cattle behaviour and shows how domestication and breeding can affect behaviour to achieve high levels of production of milk, live weight gain and fertility. Animal welfare is important for producers because it can affect the health, production and contentment of cows. Animal welfare practices which adversely affect cow and herd performance on tropical small holder dairy farms are identified. Advice is then given to change the animal's environment or modify a handler's technique to ensure cattle have the degree of comfort needed to achieve more profitable and sustainable systems of livestock farming. Cow Talk will be a beneficial resource for farmers who want to improve animal welfare, farm advisers who can assist farmers to improve their welfare practices, educators who develop training programs for farmers and dairy advisers, and other stakeholders in tropical dairy production such as local agribusiness, policy makers and research scientists.
