Handbook of Nuclear Physics Isao Tanihata, Hiroshi Toki, Toshitaka Kajino, 2023-09-04 This handbook is a comprehensive, systematic source of modern nuclear physics. It aims to summarize experimental and theoretical discoveries and an understanding of unstable nuclei and their exotic structures, which were opened up by the development of radioactive ion (RI) beam in the late 1980s. The handbook comprises three major parts. In the first part, the experiments and measured facts are well organized and reviewed. The second part summarizes recognized theories to explain the experimental facts introduced in the first part. Reflecting recent synergistic progress involving both experiment and theory, the chapters both parts are mutually related. The last part focuses on cosmo-nuclear physics—one of the mainstream subjects in modern nuclear physics. Those comprehensive topics are presented concisely. Supported by introductory reviews, all chapters are designed to present their topics in a manner accessible to readers at the graduate level. The book therefore serves as a valuable source for beginners as well, helping them to learn modern nuclear physics.

INRA feeding system for ruminants INRA, 2023-11-27 The INRA Feeding System for Ruminants has been renewed to better address emerging challenges for animal nutrition: prevision of productive responses, product quality, animal health and emissions to the environment, in a larger extent of breeding contexts. The new system is mainly built from meta-analyses of large data bases, and modelling. The dietary supply model accounts for digestive interactions and flows of individual nutrients, so that feed values depend on the final ration. Animal requirements account for variability in metabolic efficiency. Various productive and non-productive animal responses to diets are quantified. This book presents the whole system for dairy and meat, large and small ruminant production, including specificities for tropical and Mediterranean areas. The first two sections present biological concepts and equations (with their field of application and statistical accuracy) used to predict intake (including at grazing) and nutrient supply (Section 1), animal's requirements and multiple responses to diets (Section 2). They apply to net energy, metabolisable protein and amino acids, water, minerals and vitamins. Section 3 presents the use of concepts and equations in rationing with two purposes: (1) diet calculation for a given performance objective; and (2) prediction of the multiple responses of animal to diet changes. Section 4 displays the tables of feed values, and their prevision. All the equations and concepts are embedded in the fifth version of INRAration® software for practical use.

Sanctions in EU Competition Law Michael Frese, 2014-12-01 In the early decades of European integration the enforcement of EU competition law was highly centralised. Virtually all enforcement actions under Articles 101 and 102 TFEU were initiated by the European Commission. More recently the enforcement of EU competition law has become less centralised - many would say even decentralised. In 2004, essentially in an effort to increase enforcement capacity in the wake of EU enlargement, the involvement of Member State competition authorities was significantly reinforced by national authorities being given power to pursue infringements of EU competition law largely on the basis of their domestic enforcement regimes. This combination of decentralisation and enforcement autonomy raises questions about the relationship between EU law and national law, as well as about the costs of enforcement. This new book links these questions by analysing how competences in the area of sanctions are distributed between EU and national law, and how this influences the costs of enforcement. The author's conclusions, which highlight the economic implications of the choices made by competition authorities, courts and legislators, will be of use to all the above in further developing EU competition policy. The PhD thesis on which this book is based was declared runner-up in the 2013 Concurrences Awards.

Hesitant Fuzzy Sets Theory Zeshui Xu,2014-01-30 This book provides the readers with a thorough and systematic introduction to hesitant fuzzy theory. It presents the most recent research results and advanced methods in the field. These includes: hesitant fuzzy aggregation techniques, hesitant fuzzy preference relations, hesitant fuzzy measures, hesitant fuzzy clustering algorithms and hesitant fuzzy multi-attribute decision making methods. Since its introduction by Torra and Narukawa in 2009, hesitant fuzzy sets have become more and more popular and have been used for a wide range of applications, from decision-making problems to cluster analysis, from medical diagnosis to personnel appraisal and information retrieval. This book offers a comprehensive report on the state-of-the-art in hesitant fuzzy sets theory and applications, aiming at becoming a reference guide for both researchers and practitioners in the area of fuzzy mathematics and other applied research fields (e.g. operations research, information science, management science and engineering) characterized by uncertain (hesitant) information. Because of its clarity and self contained explanations, the book can also be adopted as a textbook from graduate and advanced undergraduate students.

Chinese Politics as Fragmented Authoritarianism Kjeld Erik Brødsgaard,2016-10-04 This book explores how far the concept of fragmented authoritarianism remains valid as the key concept for understanding how the Chinese political process works. It contrasts fragmented authoritarianism, which places bureaucratic bargaining at the centre of policy-making, arguing that the goals and interests of the implementing agencies have to be incorporated into a policy if implementation is to be secured, with other characterisations of China's political process. Individual chapters consider fragmented authoritarianism at work in a range of key policy areas, including energy issues, climate change and environmental management, financial reform, and civil-military relations. The book also explores policy making at the national, provincial, city and local levels; debates how far the model of fragmented authoritarianism is valid in its current form or whether modifications are needed; and discusses whether the system of policy making and implementation is overcomplicated, unwieldy and ineffective or whether it is constructive in enabling widespread consultation and scope for imagination, flexibility and variation.

Evolution of Innovation Management A. Brem,E. Viardot,2013-01-30 Uses new approaches and solutions to tackle innovations in an international context. Some of the challenges of innovating are remarkably consistent and recent times have shown the emergence of new ways for stimulating and managing the innovation process. The authors explore these new routes and assess their value for markets and companies.

Hindu Nationalism in the Indian Diaspora Edward T.G. Anderson,2024-01-01 Hindu nationalism is transforming India, as an increasingly dominant ideology and political force. But it is also a global phenomenon, with sections of India's vast diaspora drawn to, or actively supporting, right-wing Hindu nationalism. Indians overseas can be seen as an important, even inextricable, aspect of the movement. This is not a new dynamic--diasporic Hindutva ('Hindu-ness') has grown over many decades. This book explores how and why the movement became popular among India's diaspora from the second half of the twentieth century. It shows that Hindutva ideology, and its plethora of organisations, have a distinctive resonance and way of operating overseas; the movement and its ideas perform significant, particular functions for diaspora communities. With a focus on Britain, Edward T.G. Anderson argues that transnational Hindutva cannot simply be viewed as an export: this phenomenon has evolved and been shaped into an important aspect of diasporic identity, a way for people to connect with their homeland. He also sheds light on the impact of conservative Indian politics

on British multiculturalism, migrant politics and relations between various minoritised communities. To fully understand the Hindutva movement in India and identity politics in Britain, we must look at where the two come together.

Quantum Theory Mihai V. Putz, 2012-07-27 Quantum Theory: Density, Condensation, and Bonding presents in a unitary manner the main actual theories of matter, mainly the density function theory (DFT) for fermions, the Bose-Einstein condensation (BEC) for bosons, and chemical bonding as a special realization of the first two so-called mixed fermionic-bosonic states. The book covers the modern and ultimately developed quantum theories involving the key concepts of density, condensation, and bonding. The book compiles, for the first time, the density functional theory with Bose-Einstein condensation and chemical bonding theories in a fresh and novel perspective. The book introduces modern theories of matter structure and explains the nature of chemical bonds under the consecrated and ultimate quantum paradigms of molecular structure. The book is divided into three parts, one for each level of studies: Part I: Primer Density Functional Theory is suitable for undergraduate introductory courses in physics, chemistry, and the natural sciences. Part II: Primer Density Functional Bose-Einstein Condensation Theory would be suitable for graduate- or master-level courses in physics or natural sciences. Part III: Modern Quantum Theories of Chemical Bonding is written for the post-graduate, master or doctorate courses on quantum structure of molecules in chemistry or natural sciences. Thus, this book is organized as a succession of three linked courses, from undergraduate, to graduate, to postgraduate levels in modern quantum theories of many-body systems. It covers three main concepts: density, condensation, and bonding and contains the most celebrated and challenging theories of matter. The book provides a fresh perspective on the quantum theory of structure of physico-chemical systems and will show students at all levels and researchers the way for future elaboration and discoveries toward the unification of the physical and chemical concepts of matter.

Environmental Pricing Larry Kreiser, Mikael Skou Andersen, Birgitte Egelund Olsen, Stefan Speck, Janet E. Milne, Hope Ashiabor, 2015-08-28 Environmental taxes can be efficient tools for successful environmental policy. Their use, however, has been limited in many countries. This thoughtful book explores the scope of environmental pricing and examines a variety of national experiences in e

It will appeal to an audience of lawyers and non-lawyer competition professionals in the US, UK, and EU, as well as other jurisdictions with competition law regimes.

Evidence Standards in EU Competition Enforcement Andriani Kalintiri, 2019-02-07 What rules or principles govern the assessment of evidence in EU competition enforcement? This book offers, for the first time, a comprehensive academic study on the topic. Its aim is twofold. Firstly, it produces a typology of evidence standards in competition proceedings at the EU level, thereby systemising the guidance that is currently dispersed in the case-law of the EU Courts. Secondly, it examines the applicable evidence rules and principles with a view to better understanding their role in EU competition enforcement. In so doing, the book illustrates that evidence standards are not mere technicalities and their significance should not be underestimated. Rigorous and engaging, this work provides a much-needed analysis of a key question of EU competition enforcement.

Architectural System Structures Kasper Sánchez Vibæk, 2014-06-20 This book proposes a system structure in architectural design that conceptualises a systemic level in architecture and construction that lies between general construction techniques and specific architectural results. In order to make such a system structure operational, the elaboration of a model seeks on the one hand to analytically grasp and on the other hand to make it possible to actively work with system structures as part of architectural design. Kasper Sanchez Vibæk's ambition is to bridge an apparent and increasing gap between architectural ideation and the way these ideas are brought to life as real physical manifestations of our built environment. In line with the so-called systems sciences the book rejects the prevalent scientific view that the degree of detail 'automatically' enhances understanding and explanative power of complex phenomena. It establishes the idea of a systems view on buildings and architectural design that through the use of flexible constituent elements facilitates discussion and decision making about how architectural wholes are appropriately put together as assemblages of what the current and future building industry is capable of producing. Based on several years of detailed research into the architectural consequences of construction when exposed to industrialised production techniques and systems, Architectural System Structures represents a new way to look at what is already there and is useful for all those interested in the processes of architectural creation and realisation specifically attached to time, place and cultural context.

Mitos y mentadas de la economía mexicana Jacques Rogozinski, 2012-10-01 México: mitos y mentadas pone la mesa de las verdades a medias que construyen el discurso del desarrollo y el crecimiento económico del México contemporáneo, un país lleno de excusas, mitos, leyendas urbanas y ficciones ideológicas. En este libro, Jacques Rogozinski establece un sorprendente símil entre la cocina y la economía con el objeto de presentar un análisis riguroso de la situación económica actual de México y de cómo el país podría incentivar su crecimiento si tan sólo se decidiera a hacerlo. Las potencias económicas pretendieron utilizar recetas para garantizar desarrollo y crecimiento económico a largo plazo para los países en vías de desarrollo. Sin embargo, pasaron por alto que los problemas que impiden el crecimiento de las diversas naciones no son idénticos, por lo que la aplicación de una solución estándar resulta poco efectiva. ¿El bajo crecimiento del país es producto de no seguir al pie de la letra las recetas de los grandes gurús globales? Desde luego que no, y este libro nos explica por qué. México: mitos y mentadas revisa las verdades a medias que se han construido a partir del seguimiento de esos modelos económicos, así como de las problemáticas enraizadas en nuestra sociedad que, sin duda, también impiden su avance.
