CO: Twenty-Five Years of Millimeter-Wave Spectroscopy William B. Latter, Simon J.E.

Radford, Philip R. Jewell, Jeffrey G. Mangum, John Bally, 2013-12-01 Interstellar carbon monoxide (CO) was first detected in 1970 with the 36 foot diameter telescope of the National Radio Astronomy Observatory! on Kitt Peak in Southern Arizona. R. W. Wilson, K. B. Jefferts, and A. A. Penzias of Bell Labs reported, We have found intense 2.6 mm line radiation from nine Galactic sources which we attribute to carbon monoxide. Soon afterward, several other basic molecules were also observed in space. IAU Symposium 170, CO: Twenty Five Years of Millimeter Wave Spectroscopy, was organized to commemorate those discoveries. The Symposium reviewed the accomplishments of a quarter

century of research on interstellar molecular gas, surveyed the current state of millimeter-wave spectroscopy, and gave a glimpse of what the next 25 years might hold. Studies of interstellar CO have revolutionized our understanding of the phases and dynamics of the interstellar medium, the initial and final stages of stellar evolution, the chemistry of dense and diffuse interstellar matter and of the solar system, the structure of the Milky Way galaxy, and the content and structure of other galaxies, some very distant. Spectroscopic studies of CO and other molecules are primary tools for investigating all these topics, which are among the most fundamental and active research areas in astrophysics. New developments in instrumentation, including several powerful new telescopes, continue to keep millimeter and submillimeter wavelength radio astronomy at the forefront of research.

Transnational Stardom R. Meeuf, R. Raphael, 2013-02-21 Combining a diverse range of case studies with discussion between leading scholars in star studies and transnational cinema, this book analyzes stars as sites of cross-cultural contestation and the essays in this collection explore how the plasticity of stars helps disparate peoples manage the shifting ideologies of a transnational world.

Kinematics, Dynamics and Structure of the Milky Way W.L.H. Shuter,2012-12-06 The idea of holding this workshop on The Milky Way arose at the conference dinner of a meeting on Regions of Recent Star Formation held at Penticton in June 1981. Leo Blitz (now at the University of Maryland) and I decided that there was a need, and agreed that we would organize one in Vancouver in the Spring of 1982. The purpose of the workshop was to have an intensive exchange of ideas between some of the most active workers in the field regarding the recent work which has been significantly changing our concepts of the Milky Way. To achieve this we limited the number of participants, and

planned the program so that there was ample time for discussion. The meeting appeared to work very well, both scientifically and socially, and this volume contains 50 of the 55 papers that were The discussion was very lengthy, but since the papers were presented. written up after the meeting many of the points raised have been in the publications, and it seems pointless to reproduce it incorporated here. Leo and I would like to thank the many people who helped to make the meeting a success: at UBC) and Frank J. Kerr (Provost of MPSE C.V. Finnegan (Dean of Science at the University of Maryland) who welcomed the participants on behalf of the sponsoring Universities. Bart Bok who opened the scientific proceedings, and Maarten Schmidt who gave the closing summary.

Your Book Boyfriend So...I met Blitz Craven, you know him, the super famous reality TV dance star. His show is like The Bachelor, only he's looking for a dance partner. He turned up at my dance studio after his big disgrace, thinking he could use the wheelchair ballerinas I teach to get back in the world's good favor. When he looks at me, I know what he's thinking. Everyone wants to protect me from him, their shy, innocent Livia. But when we dance, I want it, more than anything. Soon we're sneaking into back rooms, dancing, kissing, planning dates away from the cameras and the wrath of my family. But I'm afraid. As thrilling as my life has become, I still have a secret. And if I stay with Blitz, the world will figure it out. BOOK 2: WOUNDED DANCE The father of my secret child has spent years trying to find me, and now he's at Dreamcatcher Dance Academy. He's going to get our baby, he says. The adoption wasn't legal since he didn't know. He has no idea how close our little girl really is. That I secretly teach her ballet. And no matter how much Blitz wants to protect me from the threat this man poses to our happy life, there's one fact I have to face. My past has caught up with me, and everything I love is in peril. BOOK 3: WICKED DANCE The three jilted women who lost a competition

when I stormed on stage are back for revenge, and everyone sees a cat-fight in the making. They're sharpening their sticks. Showing up where Blitz and I do. Getting in my face. So now I have a choice: let each of them have another shot at my lover. Or take them on myself. But Blitz is mine. Game on.

BOOK 4: TENDER DANCE Despite how hard we tried, the world has discovered my secret child. Everyone is against us. Her adopted mother, my friends at the Dreamcatcher Dance Academy. Even Blitz seems at a loss at how to handle my grief at losing my tender relationship with my little girl. When a small ballet troupe asks me to join their ranks as a dancer, I wonder if it's time to start over. Leave everything behind. Make a life for myself. But Blitz Craven has one more plan for me.

BOOK 5: FINAL DANCE There's one more surprise in store. And if I call off Hollywood's version of our wedding, we'll pay the price. It's up to me now. Do I let the world in on my secret, for the good of our future? Or do I keep it to myself? There's only one way to find out. ____

The Physics of Galaxy Formation Claudia Del P. Lagos,2013-10-15 This thesis addresses two of the central processes which underpin the formation of galaxies: the formation of stars and the injection of energy into the interstellar medium from supernovae, called feedback. In her work Claudia Lagos has completely overhauled the treatment of these processes in simulations of galaxy formation. Her thesis makes two major breakthroughs, and represents the first major steps forward in these areas in more than a decade. Her work has enabled, for the first time, predictions to be made which can be compared against new observations which probe the neutral gas content of galaxies, opening up a completely novel way to constrain the models. The treatment of feedback from supernovae, and how this removes material from the interstellar medium, is also likely to have a lasting impact on the field. Claudia Lagos Ph.D. thesis was nominated by the Institute for Computational Cosmology at Durham University as an outstanding Ph.D. thesis 2012.

The Melting Season Celeste Conway, 2009-04-22

Giselle is a cultured ballet student, the daughter of the famous ballerina Marina Parke-Vanova and the late dance historian Grigori Vanov. On her first-ever trip to Westchester, as her mother's deranged boyfriend Blitz calls it, she meets the most beautiful boy she's ever seen. Will introduces Giselle to the world beyond Manhattan, and for the first time, makes her feel comfortable outside her perfectly protected apartment on Central Park West. But Giselle has some issues to overcome--and some memories about her father that keep rising to the

surface. With Will's help, Giselle must come to terms with her family's glorious--and not so glorious--past and focus on the future.

Handbook of Nuclear Physics Isao Tanihata,Hiroshi Toki,Toshitaka Kajino,2023-09-04 This handbook is a comprehensive, systematic source of modern nuclear physics. It aims to summarize experimental and theoretical discoveries and an understanding of unstable nuclei and their exotic structures, which were opened up by the development of radioactive ion (RI) beam in the late 1980s. The handbook comprises three major parts. In the first part, the experiments and measured facts are well organized and reviewed. The second part summarizes recognized theories to explain the experimental facts introduced in the first part. Reflecting recent synergistic progress involving both experiment and theory, the chapters both parts are mutually related. The last part focuses on cosmo-nuclear physics—one of the mainstream subjects in modern nuclear physics. Those comprehensive topics are presented concisely. Supported by introductory reviews, all chapters are designed to present their topics in a manner accessible to readers at the graduate level. The book therefore serves as a

valuable source for beginners as well, helping them to learn modern nuclear physics.

Millimetre and Submillimetre Astronomy R.D. Wolstencroft, W.B. Burton, 2012-12-06 The millimetre and submillimetre spectral region (300 to 3000 μm or 1000 to 100 GHz) was until recently one of the few spectral regimes not fully opened up for astronomical studies. Thanks both to improvements in detectors and receivers and to the construction of large telescopes at high altitude sites this situation is improving very rapidly. Three major telescopes have been built recently and are coming into operation during 1987 and 1988, namely the 15m James Clerk Maxwell Telescope (JCMT) and the IOA Caltech Submillimetre Observatory (CSO) telescope, both located on Mauna Kea, Hawaii, and the 15 m Swedish -ESO telescope (SEST) in Chile. Because a very wide range of astronomical problems can be tackled with these major new facilities there is a great deal of interest from the many potential new users anxious to become familiar with this rapidly developing field. During 1986 it became clear to British and Dutch astronomers involved in planning the commissioning and operation of the JCMT, that a summer school in this field would greatly benefit the potential and actual JCMT user community.

With financial support from the SERC and supplemented by a grant from the ZWO, the Summer School on 'Millimetre and Submillimetre Astronomy' was held at Stirling University from June 21 to 27, 1987.

The Galactic Interstellar Medium W.B. Burton, B.G. Elmegreen, R. Genzel, 2006-04-18 The previous Saas-Fee Advanced Course dedicated to the interstellar medium took place in 1972. The tremendous scientific advances that have occurred in this field since then, in particular owing to the availability of receivers working at completely unexplored wavelength bands, fully justified a new set of lectures. As a consequence, the members of the Swiss Society for Astrophysics and Astronomy voted that The Galactic Interstellar Medium should be the subject of the 1991 course. The 21st Saas Fee Advanced Course took place in Les Diablerets from 18 to 23 March 1991, gathering together about 80 participants from all over the world, but mostly from Europe. According to a rule that has proved to lead to success, but also to challenge the lecturers' energy, the format of a Saas-Fee Advanced Course consists traditionally of 28 lectures of 45 minutes which take place in the morning and late

afternoon, leaving ample time for discussions, self-study, hiking or skiing. Despite the inordinate work load imposed, this year's lecturers felt that the subject was sufficiently dense to increase the lecture time by 1/3! This proved judicious and left more time for questions and discussions during the lectures.

The Interstellar Medium in Galaxies Harley A. Thronson Jr., J.M. Shull, 2013-12-21 This book contains the proceedings of the sixth Eurographics Workshop on Virtual Environments. The event took place from June 1 to June 2, 2000, in Amsterdam. We hope that readers will find these proceedings to be valuable, not only for virtual environment researchers, but also for practitioners developing or using virtual environment applications. We are glad to report that visibility of the workshop continues to expand and that virtual environment researchers and practitioners from all over the world are submitting papers. This year, 40 papers and case studies were submitted of which 20 were accepted. In addition, we are glad to see that the focus of the workshop is also expanding. We accepted 6 research papers on evaluation of virtual environments and there was a broad sampling of other topics. We would like to thank all those involved in organizing the symposium. In particular, thanks go to Mieke Brune who was

in charge of the local organization. In addition, we want to thank the international program committee for their excellent, yet laborious, job in reviewing all submitted papers. The quality of the workshop is a reflection of the quality of the submitted papers and the quality of the reviewing process.

The Physics of Star Formation and Early Stellar Evolution Charles J. Lada, N.D. Kylafis, 2012-12-06

The origin of stars is one of the principle mysteries of nature. During the last two decades advances in technology have enabled more progress to be made in the quest to understand stellar origins than at any other time in history. The study of star formation has developed into one of the most important branches of modern astrophysical research. A large body of observational data and a considerable literature now exist concerning this topic and a large community of international astronomers and physicists devote their efforts attempting to decipher the secrets of stellar birth. Yet, the young astronomer, physicist or more advanced researcher desiring to obtain a basic background in this area of research must sift through a very diverse and sometimes bewildering literature. A literature which includes research in many disciplines and sub disciplines of classical astrophysics from stellar

structure to the interstellar medium and encompasses the entire range of the electromagnetic spectrum from radio to gamma rays. Often, the reward of a successful foray through the current literature is the realization that the results can be obsolete and outdated as soon as the ink is dry in the journal or the conference proceeding in which they are published.
