TRON Project 1989 Ken Sakamura,2012-12-06 It is almost six years since the inauguration of the TRON project, a concept first proposed by Dr. K. Sakamura of the University of Tokyo, and it is almost 2 years since the foundation of the TRON Association on March 1988. The number of regular member companies registered in the TRON Association as of November 1988 is 145 which is a new record for the Association. Some of this year's major activities that I would particularly like to mention are: - Over 50 TRON project-related products have been or are about to be introduced to the marketplace, according to a preliminary report from the Future Study Committee of the TRON Association. In particular, I am happy to say that the ITRON subproject, which is ahead of the other subprojects, has progressed so far that several papers on ITRON applications will be presented at this conference, which means that the ITRON specifications are now ready for application to embedded commercial and industrial products.

TRON Project 1990 Ken Sakamura,2012-12-06 I wish to extend my warm greetings to you all on behalf of the TRON Association, on this occasion of the Seventh International TRON Project Symposium. The TRON Project was proposed by Dr. Ken Sakamura of the University of Tokyo, with the aim of designing a new, comprehensive computer architecture that is open to worldwide use. Already more than six years have passed since the project was put in motion. The TRON Association is now made up of over 140 companies and organizations, including 25 overseas firms or their affiliates. A basic goal of TRON Project activities is to offer the world a human-oriented computer culture, that will lead to a richer and more fulfilling life for people throughout the world. It is our desire to bring to reality a new order in the world of computers, based on design concepts that consider the needs of human beings first of all, and to enable people to enjoy the full benefits of these computers in their daily life. Thanks to the efforts of Association members, in recent months a number of TRON-specification 32-bit microprocessors have been made available. ITRON-specification products are continuing to appear, and we are now seeing commercial implementations of BTRON specifications as well. The CTRON subproject, meanwhile, is promoting standardization through validation testing and a portability experiment, and products are being marketed by several firms. This is truly a year in which the TRON Project has reached the practical implementation stage.

Advances in Proof Theory Reinhard Kahle,Thomas Strahm,Thomas Studer,2016-05-04 The aim of this volume is to collect original contributions by the best specialists from the area of proof theory, constructivity, and computation and discuss recent trends and results in these areas. Some emphasis will be put on ordinal analysis, reductive proof theory, explicit mathematics and type-theoretic formalisms, and abstract computations. The volume is dedicated to the 60th birthday of Professor Gerhard Jäger, who has been instrumental in shaping and promoting logic in Switzerland for the last 25 years. It comprises contributions from the symposium "Advances in Proof Theory", which was held in Bern in December 2013. Proof theory came into being in the twenties of the last century, when it was inaugurated by David Hilbert in order to secure the foundations of mathematics. It was substantially influenced by Gödel's famous incompleteness theorems of 1930 and Gentzen's new consistency proof for the axiom system of first order number theory in 1936. Today, proof theory is a well-established branch of mathematical and philosophical logic and one of the pillars of the foundations of mathematics. Proof theory explores constructive and computational aspects of mathematical reasoning; it is particularly suitable for dealing with various questions in computer science.

Fundamentals of Digital Audio, New Edition Alan P. Kefauver, David Patschke, 2007-01-01 In Fundamentals of Digital Audio, Alan P. Kefauver and David Patschke present a systematic overview of the elements for digital recording and reproducing sound. With Ideas grounded in the principles of acoustics, the authors explore the essential issues involved in preserving, transferring, and modifying sound recordings in the digital domain. In addition to references on historic methods of sound reproduction, this book includes detailed information about the latest digital audio technology. Of special interest is the coverage of storage media and compression technologies. The authors detail a comprehensive introduction and evolution of data storage and media standards, including CD/DVD/Blu-ray/HD DVD, as well as fully (but plainly) detailing associated digital audio compression algorithms. They catalog in detail the processes involved in digitally editing recorded sound, presenting a step-by-step editing and mastering session. Fundamentals of Digital Audio is an essential textbook for anyone who wants to better understand or work with recorded sound using today's digital equipment. The book contains many diagrams and illustrations through which the authors share their expertise with the reader. Among the few books that treat this subject both comprehensively and understandably, the new edition of Fundamentals of Digital Audio should continue to be an indispensable text in this area.

TRON Project 1988 Ken Sakamura,1989-01-18 It has been almost 5 years since the inauguration of the TRON project, a concept first proposed by Dr. K. Sakamura of the University of Tokyo. The TRON Association, which was founded as an independent organization in March 1988, has been taking over the activities of the earlier TRON Association, which was a division of Japan Electronic Industry Development Association (JEIDA). It has been expanding various operations to globalize the organizations activities. The number of member companies already exceeds 100, with increasing participation from overseas companies. It is truly an awaring historical event that so many members with the same qualifications and aims engaged in the research and development of the computer environment could be gathered together. The TRON concept aims at the creation of a new and complete environment beneficial to both computer and mankind. It has a very wide scope and great diversity. As it includes the open architecture concept and as the TRON machine should be able to work with various foreign languages, the TRON is targetted to be used internationally. In order for us to create a complete TRON world, at though there are several TRON products already on the market, continuous and aggressive participation from as members together with concentration as further development are indispensable. We, the TRON promoters, are much encouraged by such a driving force.
