*Principles of Perinatal and Pediatric HIV/AIDS* Lala Mamatha M,2011-10 Principles of Perinatal & Pediatric HIV/AIDS is a comprehensive guide to the treatment of children with HIV/AIDS. Beginning with an introduction to HIV infected children, the book following sections consider clinical manifestations of the disease, perinatal and newborn HIV, HIV in adolescence and management of the disease. Authored by international specialists from Europe, Asia, South Africa and the USA, this text includes numerous images and illustrations to enhance learning.

*Review of the HIVNET 012 Perinatal HIV Prevention Study* Institute of Medicine,Board on Population Health and Public Health Practice,Committee on Reviewing the HIVNET 012 Perinatal HIV Prevention Study,2005-08-05 Mother-to-child transmission of HIV-1 afflicts hundreds of thousands of children every year, especially in parts of the world such as sub-Saharan Africa, where HIV infection is prevalent and resources are limited. This tragic reality has spurred researchers to search for an effective, safe, and inexpensive treatment that could reduce the risk of perinatal HIV transmission. The HIVNET 012 trial was designed to provide preliminary information on the comparative safety and efficacy of two relatively simple and inexpensive short courses of oral antiretroviral treatment likely to be feasible in resource-limited settings. The resulting report identified some problems with procedures and documentation, but concluded that these issues did not compromise the results of the study. However, these issues have led to public scrutiny and continued controversy. Review of the HIVNET 012 Perinatal HIV Prevention Study critically and objectively evaluates the study's design and conduct, and assesses the impact of the initial procedural issues on the validity of the overall findings and conclusions of the trial.

[Current Studies in HIV Research](#) SeyedAhmad SeyedAlinaghi,2016-07-13 Current Studies in HIV Research brings key topics in HIV/AIDS research to the fore by compiling reviews prepared by HIV/AIDS experts. Readers will benefit from the extensive range of topics covered in this book. Each of the 24 chapters of this volume present a brief account of major facets of HIV/AIDS research including epidemiology, HIV prevention, basic virology, clinical studies (including co-infection with mycobacteria and hepatitis viruses), antiretroviral therapy, treatment options for specific patient groups (such as pregnant women and elderly patients), patient psychology and public health concerns. The book also presents information about issues encountered in practical situations such as management models for non-governmental organizations (NGOs), community involvement in HIV programs and sampling methods in HIV research. Current Studies in HIV Research is, therefore, a useful guide to research information for novice epidemiologists, clinicians, psychologists, sociologists and managers involved in planning and implementing HIV/AIDS research, prevention and monitoring projects.

**Methodological Challenges in Biomedical HIV Prevention Trials** Institute of Medicine, Board on Global Health, Committee on the Methodological Challenges in HIV Prevention Trials, 2008-06-13 The number of people infected with HIV or living with AIDS is increasing at unprecedented rates as various scientists, organizations, and institutions search for innovative solutions to combating and preventing the disease. At the request of the Bill & Melinda Gates Foundation, Methodological Challenges in Biomedical HIV Prevention Trials addresses methodological challenges in late-stage nonvaccine biomedical HIV prevention trials with a specific focus on microbicide and pre-exposure prophylaxis trials. This book recommends a number of ways to improve the design, monitoring, and analysis of late-stage clinical trials that evaluate nonvaccine biomedical interventions. The objectives include identifying a beneficial method of intervention, enhancing quantification of the impact, properly assessing the effects of using such an intervention, and reducing biases that can lead to false positive trial results. According to Methodological Challenges in Biomedical HIV Prevention Trials, the need to identify a range of effective, practical, and affordable preventive strategies is critical. Although a large number of promising new HIV prevention strategies and products are currently being tested in late-stage clinical trials, these trials face a myriad of methodological challenges that slow the pace of research and limit the ability to identify and fully evaluate effective biomedical interventions.

You're the First One I've Told Kathryn Whetten-Goldstein, Brian Wells Pence, 2013-03-15 The Deep South has seen a 36 percent increase in AIDS cases while the rest of the nation has seen a 2 percent decline. Many of the underlying reasons for the disease's continued spread in the region—ignorance about HIV, reluctance to get tested, non-adherence to treatment protocols, resistance to behavioral changes—remain unaddressed by policymakers. In this extensively revised second edition, Kathryn Whetten and Brian Wells Pence present a rich discussion of twenty-five ethnographic life stories of people living with HIV in the South. Most importantly, they incorporate research from their recent quantitative study, "Coping with HIV/AIDS in the Southeast" (CHASE), which includes 611 HIV-positive patients from North Carolina, South Carolina, Georgia, Alabama, and Louisiana. This new edition continues to bring the participants' voices to life while highlighting how the CHASE study confirmed many of the themes that originally emerged from the life histories. This is the first cohesive compilation of up-to-date evidence on the unique and difficult aspects of living with HIV in the Deep South.

**AIDS and the Social Sciences** Richard Ulack, William F. Skinner, 2014-07-15 Though more than 150,000 AIDS-related deaths have been reported worldwide and between 5 and 10 million people are now infected with its precursor, HIV-1, the deadly and relatively new AIDS virus is still a mystery. AIDS and the Social Sciences: Common Threads, an enlightening examination of the AIDS epidemic from the viewpoints of various social sciences, provides us with clues to that mystery. The essays' original research and firsthand accounts from social scientists offer an excellent overview of the research agendas and directions for a disease that is an increasing presence in our society. Sociologists, geographers, anthropologists, psychologists, social workers, and people in government agencies converge in this book to discuss the social, political, economic, legal, moral, and ethical issues related to AIDS. Their methods of approaching the study of AIDS range from a case study approach to survey research to participant observation. Among the topics examined in this distinctive collection are the geographic origins of AIDS, the psychosocial aspects of AIDS, the impact of AIDS on women and children, and the federal funding patterns of AIDS-related research. One chapter traces the diffusion of the pandemic in major urban areas, smaller cities, and finally rural America. Another documents the devastating impact the disease has had on central and East Africa, some areas of which have as many as one in four adults who are HIV-infected. AIDS and the Social Sciences could serve as a primary or supplemental text for college courses and is an important resource for anyone interested in social science or public health.

*Structural Interventions for HIV Prevention* Richard A. Crosby, Ralph J. DiClemente, 2018-10-26 A COMPREHENSIVE NEW REFERENCE WORK ON STRUCTURAL APPROACHES TO PREVENTING HIV Structural interventions -- changes to environment aimed at influencing health behaviors -- are the most universal and cost-effective tool in preventing new incidences of HIV. They are not easy to get right, however. Structural Interventions for HIV Prevention offers an authoritative reference for both understanding these programs and instituting them to greatest effect. Whether through changes to policy, environment, social/community norms, or a combination of each, this volume offers actionable and attainable blueprints to creating and evaluating programs in any setting or country. It is an essential resource for researchers and practitioners in the continuing fight against HIV.

**Case Studies in Ethics and HIV Research** Sana Loue, Earl C. Pike, 2007-10-05 This important work takes as its subject one of medicine's most pressing arenas of ethical debate. There has been a consistent interest in ethical issues arising in the context of HIV research. Ongoing international and multi-site studies and the continuing search for an HIV vaccine continue to prompt examination of how this research is conducted. Also

examined are how participants are engaged in the studies and the obligations of the researchers to individual participants and their communities during the course of and following the conclusion of the research. Each chapter of this book is authored primarily by one of the editors (secondarily by the other) and is accompanied by one to two case studies.

**Updates in HIV and AIDS: Part I, An Issue of Infectious Disease Clinics**, Michael S. Saag, 2014-08-28 This first part of a 2-part issue of *Infectious Disease Clinics*, edited by Michael S. Saag, MD and Henry Masur, MD, is devoted to HIV/AIDS. This issue will cover global epidemiology; testing, staging, and evaluation; linkage to care, retention in care; antiretroviral therapy: current drugs, when to start, what to start, failure; update on opportunistic infections; HIV co-morbidities; and co-infection Hepatitis B and Hepatitis C.

**HIV and Endocrine Disorders, An Issue of Endocrinology and Metabolism Clinics of North America**, Paul Hruz, 2014-08-17 This issue of *Endocrinology and Metabolism Clinics*, guest edited by Dr. Paul Hruz, is devoted to HIV and Endocrine Disorders. Articles in this issue include: Dyslipidemia and cardiovascular risk in HIV infection; Changes in nutritional concerns in HIV/AIDS; HIV Lipodystrophy: Lessons learned about adipose tissue and metabolic disorders; Hypogonadism in the HIV infected male; Gonadal function and reproductive health in women with HIV; Osteopenia, osteoporosis, and fracture risk with HIV infection and treatment; HIV-associated calcium and vitamin D abnormalities; Alterations in pancreatic islet function in HIV; Insulin resistance, glucose intolerance, and diabetes in HIV; Thyroid abnormalities in HIV; HPA axis/adrenal pathology in HIV; and Endocrinopathies in HIV-infected children.

**Nutrition and HIV** Saurabh Mehta, Julia Finkelstein, 2018-05-15 The world continues to lose more than a million lives each year to the HIV epidemic, and nearly two million individuals were infected with HIV in 2017 alone. The new Sustainable Development Goals, adopted by countries of the United Nations in September 2015, include a commitment to end the AIDS epidemic by 2030. Considerable emphasis on prevention of new infections and treatment of those living with HIV will be needed to make this goal achievable. With nearly 37 million people now living with HIV, it is a communicable disease that behaves like a noncommunicable disease. Nutritional management is integral to comprehensive HIV care and treatment. Improved nutritional status and weight gain can increase recovery and strength of individuals living with HIV/AIDS, improve dietary diversity and caloric intake, and improve quality of life. This book highlights evidence-based research linking nutrition and HIV and identifies research gaps to inform the development of guidelines and policies for the United Nations' Sustainable Development Goals. A comprehensive approach that includes nutritional interventions is likely to maximize the benefit of antiretroviral therapy in preventing HIV disease progression and other adverse outcomes in HIV-infected men and women. Modification of nutritional status has been shown to enhance the quality of life of those suffering HIV/AIDS, both physically in terms of improved body mass index and immunological markers, and psychologically, by improving symptoms of depression. While the primary focus for those infected should remain on antiretroviral treatment and increasing its availability and coverage, improvement of nutritional status plays a complementary role in the management of HIV infection.

**HIV/AIDS and the Social Consequences of Untamed Biomedicine** Graham Fordham, 2014-11-13 Drawing on the case of HIV/AIDS in Thailand, this book examines how anthropological and other interpretative social science research has been utilized in modeling the AIDS epidemic, and in the design and implementation of interventions. It argues that much social science research has been complicit with the forces that generated the epidemic and with the social control agendas of the state, and that as such it has increased the weight of structural violence bearing upon the afflicted. The book also questions claims of Thai AIDS control success, arguing that these can only be made at the cost of excluding categories such as intravenous drug users, the incarcerated, and homosexuals, who continue to experience extraordinarily high levels of levels of HIV infection. Considered deviant and undeserving, these persons have deliberately been excluded from harm reduction programs. Overall, this work argues for the untapped potential of anthropological research in the health field, a confident anthropology rooted in ethnography and a critical reflexivity. Crucially, it argues that in context of interdisciplinary collaborations, anthropological research must refuse relegation to the status of an adjunct discipline, and must be free epistemologically and methodologically from the universalizing assumptions and practices of biomedicine.
