Home Environment and Early Cognitive Development Allen W. Gottfried, 2013-10-22 Home Environment and Early Cognitive Development: Longitudinal Research presents the results of longitudinal studies in Canada and the United States that looked into the relationship between home environment and early cognitive development. The aim of these investigations is to determine the specific or process home environmental variables that correlate with and possibly regulate cognitive development during infancy and the preschool years. Comprised of 10 chapters, this book begins with a brief introduction to the issues investigated. Each of the following seven chapters is devoted to a longitudinal investigation, with emphasis on data presentation, analysis, and interpretation. The influence of home environment on cognitive development in young children of middle-socioeconomic-status families as well as Mexican-American children is considered. Assessments of cognitive development are carried out using standard psychometric tests of intelligence; Piagetian-type measures of sensorimotor development; measures of language development; and measures of recognition memory for infants. The final chapter assesses the implications for intervention of the link between home environment and early cognitive development. This monograph will be of interest to psychologists and sociologists.

Helping Low Birth Weight, Premature Babies Ruth T. Gross, Donna Spiker, Christine W. Haynes, 1997 Each year in the United States, 250,000 infants are born too soon, weighing too little. For these low birth weight, premature infants, the future is uncertain, since they are at risk for a variety of serious medical and developmental problems—including behavioral and learning disorders that may have damaging effects for the rest of their lives. The extent to which a comprehensive early intervention program could improve or prevent these adverse outcomes was examined in the Infant Health and Development Program, a

randomized controlled trial involving almost 1,000 infants in eight cities in the United States. This book describes in detail the program, its research methodology, the progress of the program, and the results of the clinical trial. The program was administered by an interdisciplinary team composed of physicians, biostatisticians, child development specialists, and researchers from several disciplines. It was instituted upon the discharge of the infants from the neonatal nursery and was maintained for three years. One-third of the infants were randomly assigned to an intervention group, the remainder to a follow-up group. Infants in both groups received pediatric care and community referral services, but only those in the intervention group participated in a program that included extensive home visits, attendance at a child development center, and group meetings for parents. The results of the program proved to be clinically important; at age three, the children in the intervention group had significantly higher IQ scores, greater cognitive development, and fewer behavioral problems. The implications of the findings for public policy are equally important, for there is increasing interest in the prevention, early detection, and management of developmental disabilities in children, as evidenced by such legislation as the Education for All Children Act. Strategies to minimize the problems of low birth weight children, with their potential for long-term savings through the prevention of disabilities and their attendant costs, could have significant repercussions in such governmental areas as medical care, education, and social welfare.

Handbook of Research Design and Social Measurement

Delbert C. Miller, Neil J. Salkind, 2002-01-16 If a student researcher had only one handbook on their bookshelf, Miller and Salkind's Handbook would certainly have to be it. With the updated material, the addition of the section on ethical issues (which is so well done that I'm recommending it to the departmental representative to the university IRB), and a new Part 4 on Qualitative Methods, the new Handbook is an indispensable resource for researchers. --Dan Cover, Department of Sociology, Furman University I have observed that most instructors want to teach methodology their way to imbue the course with their own approach; Miller-Salkind allows one to do this easily. The book is

both conceptually strong (e.g., very good coverage of epistemology, research design and statistics) and at the same time provides a wealth of practical knowledge (scales, indices, professional organizations, computer applications, etc.) In addition, it covers the waterfront of methodology. --Michael L. Vasu, Director of Information Technology, North Carolina State University A unique and excellent reference tool for all social science researchers, and a good textbook for graduate students and senior year undergraduate classes. These students are about to enter the real life of research, and need a handy and comprehensive tool as a starting point that offers shortcuts for getting into real research projects. For a small project, the book offers enough information to get the project started. For big projects, the book is ideal for information on where to look for things and examples. --Jianhong Liu, Department of Sociology, Rhode Island College The book considered a necessity by many social science researchers and their students has been revised and updated while retaining the features that made it so useful. The emphasis in this new edition is on the tools graduate students and more advanced researchers need to conduct high quality research. Features/Benefits: Provides step-by-step instruction for students' research training by beginning with how to find a creative idea, a middle-range theory, and initial hypothesis and proceeds through design, proposal, collection and analysis of data followed by writing, reporting and publication Section on scales and indices are organized so that readers can quickly locate and find the type of scale or index in which they may be interested All sections are now followed by useful and well-considered reference sections so that readers can read more about each topic Includes updated coverage on new scales, internal and external validity, and new analytic techniques with extensive references on each Presents extensive coverage of how to prepare manuscripts for publication, including a list of all journals covered by Sociological Abstracts along with the editorial office address and URL for each entry

Discusses the importance of policy research with presentation and discussion of specific models as an adjunct to both applied and basic research techniques Provides extensive coverage of funding opportunities including those offered by the National Institutes of Health, the National Science Foundation, and a directory of private funding sources including relevant contact information New to this edition: New Part 4 by John Creswell and Ray Maietta provides a comprehensive introduction to qualitative methods including a review of existing computer applications for collecting and analyzing data New and more current reviews and commentaries have replaced dated or no longer relevant excerpts Thousands of new references on the assessment of important sociological variables as well as references to such topics as statistical analysis, computer applications, and specific topics Thoroughly updated information on the use of computers and online research techniques, including beginning and intermediate material about the Internet and its use by the modern research scientist Coherent and thoughtful review of the most popular statistical analysis software packages New guidelines and discussion of ethical practices in social and behavioral science research, including extensive coverage of institutional review board procedures and activities Expansion of social indicators to include international coverage Plus, there is an extensive and well-organized table of contents with four levels of headings; and, for the first time in the history of the book, a comprehensive index.

Lead Exposure and Child Development M. Smith, L.

Grant, A.I. Sors, 2012-12-06 This book arises out of a workshop on lead exposure and child development which was held at the University of Edinburgh on 8th-12th September 1986. It was organized jointly by the Commission of the European Communities (CEC) and the US Environmental Protection Agency (EPA), in association with the UK Department of the Environment and the Scottish Home and Health Department. It brought together most of the internationally recognized groups working on the effects of lead exposure on child development including child psychologists, psychiatrists, neurologists, epidemiologists, toxicologists, statisticians, and medical practitioners. One of the unique features of the meeting was that it included workers from initially separate fields of lead research, in particular those undertaking studies in infants and in older children, and those carrying out behavioural research in animals, as well as those undertaking biochemical studies on mechanisms of lead effect. The structure of this book reflects the main elements of the meeting. As such it includes three main sections. The first consists of two major state-of-the-art reviews, and two invited introductory papers. The reviews were prepared for the organizers of the conference by two of the Editors. The objectives were to assess critically the state of current knowledge in this field and to provide a scientific basis both for policy decisions and for further research. The review prepared by Marjorie Smith for the Commission of the European Communities focusses on methodological and design issues, and summarizes our present scientific knowledge in this area.

Stability and Continuity in Mental Development M. H.

Bornstein, N. A. Krasnegor, 2013-05-13 Filling a gap in current literature on human development, this volume explores the influence of psychophysiological, behavioral, and social factors on stability and continuity in the development of the mind during human infancy. The book reviews existing literature, presents new data, and discusses issues of substance in mental development,

methodology, and interpretation. Commentaries by recognized experts interpret the research results from the previous chapters.
