More Hot Air Tony Kordyban,2005-01-01 Each case study, told as an anecdote, is designed to teach a basic concept of heat transfer, as applied to keeping electronics from overheating. Many people not trained in the basics of heat transfer have been roped into doing this job out of necessity. For those who lack any formal training in heat transfer, the case studies explode many of the myths about cooling electronics and replace these flawed practices with sound engineering, based on actual heat transfer theory. The case studies and humor in this book are also entertaining to those well versed in electronics cooling.--BOOK JACKET.

Hot Air Peter Stott,2022-08 The shocking inside story of the fight to halt climate change over the past twenty-five years by a world-renowned scientist. SHORTLISTED FOR THE RSL CHRISTOPHER BLAND PRIZE 2022 Ours is the age of global warming. Rising sea levels, extreme weather, forest fires. Dire warnings are everywhere, so why has it taken so long for the crisis to be recognised? Here, for the first time, climate scientist Peter Stott reveals the bitter fight to get international recognition for what, among scientists, has been known for decades: human activity causes climate change. Across continents and against the efforts of sceptical governments, prominent climate change deniers and shadowy lobbyists, Hot Air is the urgent story of how the science was developed, how it has been repeatedly sabotaged and why humanity hasn't a second to spare in the fight to halt climate change.

The Hot Air Balloon Book Clive Catterall, 2013 More than a century before the Wright brothers' first flight, humans were taking to the skies in hot air balloons. Today, with basic craft skills, you can build and safely launch your own balloons using inexpensive, readily available materials. Author and inventor Clive Catterall provides illustrated, step-by-step instructions for eight different homemade models, as well as the science and history behind them. Some, like the Solar Tetron or the Trash Bag Sausage, are made from plastic bags and tape. Others, like the Khom Loi or the Kongming Lantern, are built using tissue paper and wire. The Hot Air Balloon Book also shows readers ways to heat the interior air that lifts these balloons, from tea candles to hair dryers, kitchen toasters to the sun's warming rays. Always keeping safety in mind, the author includes detailed guidelines on when and where open flames are appropriate and the proper weather conditions to launch these lighter-than-air craft.

Into Hot Air Chris Elliott, 2007-10-24 Now in paperback: For decades the world has credited renowned explorer Sir Edmund Hillary with being the first person to reach the peak of Mount Everest. But was he? Evidence to the contrary arrives one day on the doorstep of Chris Elliott--an anonymous package that contains the diary of his Great Uncle Percy Brackett Elliott, an adventurer (and raving loony) who mysteriously disappeared decades ago while climbing Everest. The diary seems to indicate that Percy--not Hillary--was the first person to reach the peak. By retracing Percy's journey, Chris believes he will be able to uncover the mystery behind his disappearance and perhaps once and for all determine who was really the first person to summit

Everest.

The issue of what a drug is and how we should live with them affects us all: parents, teachers, users - anyone who has taken a painkiller or drunk a glass of wine. Written by renowned psychiatrist, Professor David Nutt, *Drugs without the hot air* casts a refreshingly honest light on drugs and answers crucial questions that are rarely ever disputed. What are we missing by banning medical research into magic mushrooms, LSD and cannabis? Can they be sources of valuable treatments? How can psychedelics treat depression? *Drugs without the hot air* covers a wide range of topics, from addiction and whether addictive personalities exist to the role of cannabis in treating epilepsy, an overview on the opioid crisis, and an assessment of how harmful vaping is. This new expanded and revised second edition includes even more details on international policies, particularly in the US. the 'war of drugs'.

Food and Climate Change without the hot air S L Bridle, 2020-09-03 Did you know that more than a quarter of the greenhouse-gas emissions that cause climate change come from food? In this ground-breaking and accessible book, Professor Sarah Bridle calculates the greenhouse gas emissions of a selection of our most popular meals and beverages, from a cup of tea and a bowl of cereal to spaghetti bolognese and chicken tikka masala. Breaking down different ingredients and cooking methods to reveal their environmental impact, she finds delicious and sustainable meal alternatives. With this knowledge, we can make a conscious effort to lower our emissions, such as eating more locally grown produce and introducing meat-free days, enabling us to help our planet while also eating healthier food. As well as explaining how our food choices impact the environment and giving practical advice on how to lower emissions, *Food and Climate Change without the hot air* considers how climate change will affect the food of the future. A rigorously researched discussion of how food and climate change are intimately connected, Bridle also dives into the important topic of food waste and gives valuable tips to avoid leftovers. Illustrated in full colour throughout, this is an essential resource for anyone with eco-anxiety looking for quick and easy ideas to become more sustainable.

Keeping children in mind, Faith answers these question and many more in her new book, Jackson and the Hot-Air Balloon. Seeking to give everyone the opportunity to experience the joy and exhilaration of a hot-air balloon ride, Schwenker shares her experiences piloting balloons through the eyes of a child, four-year-old Jackson.
