Current Topics in Management M. Afzalur Rahim, 2011-12-31 Volume thirteen in Current Topics in Management is focused on global perspectives on strategy, behavior, and performance. Originally presented at the 2008 ICAM (International Conference on Advances in Management) conference, these contributions provide a substantial basis for such thematic developments. The series continues to resist pressures for specialized research on narrow topics within some temporary niche. It transcends narrow disciplines and national boundaries to provide management research with a universalistic flavor. There are thousands of books and hundreds of academic and practitioner journals and magazines about the general subject of management. Each has its own subculture and concerns. The thirteenth volume of Current Topics is devoted to expanding and integrating ideas, research, and experiences that cuts across these specialties. The editor recognizes that it is important to respect the natural interdependencies that constitute management, but doing so requires the field to rise above narrow specialization and niche research. For an outstanding vision of the frontiers of management research and emerging topics such as the sub-prime crisis and recession this volume is an excellent place to begin. Among other topics, the volume highlights the economic roots of management--the increase in visibility and perceived importance of accounting in the banking sector and how accounting is significant beyond its technical roles. It provides new insights into how management accounting practices, along with other organizational systems, play an important role in questioning, visualizing, analyzing, and measuring implemented strategies. It understands accounting's important influence on strategic decision-making, and its role in legitimating action. Cumulatively, these contributions integrate theory, research, and practice, while sharing ideas and insights from different national, cultural, and research traditions.

The chapter fits in with the forward looking theme of the book as it will hopefully inspire other chemists that are interested in synthesising natural products to produce elegant new, or industrially applicable routes to these and other perfumery materials. Chapter three looks at the growing area of interest in asymmetric fragrance materials. The chapter focuses on the use of the metal-BINAP catalytic system for the preparation of fragrance and flavour ingredients. Environmental considerations are now an integral and vital part of planning any new industrial chemical process. Current Topics in Vector Research , 2012-12-06 Vector transmission of pathogens affecting human, animal, and plant health continues to plague mankind both in industrialized and Third World countries. The diseases caused by these pathogens cost billions of dollars annually in medical expenses and lost productivity. Some cause widespread of food-and fiber-producing plants and animals, whereas others destruction present direct and immediate threats to human life and further development in Third World countries. During the past 15 years or so, we have witnessed an explosive increase in interest in how vectors acquire, carry, and subsequently inoculate disease agents to human, animal, and plant hosts. This interest transcends the boundaries of anyone discipline and involves researchers from such varied fields as human and veterinary medicine, entomology, plant pathology, virology, physiology, microbiology, parasitology, biochemistry, molecular biology, genetic engineering,

ultrastructure, biophysics, bio systematics, biogeography, ecology, behavioral sciences, and others. Analysis of Marine Samples in Search of Bioactive Compounds, 2014-08-26 Seas and oceans offer a wide range of temperature, pressure, light and chemical conditions thus allowing a wide diversity of marine organisms from shallow coastal waters to the deep ocean. These resources can be used to obtain new products and develop services, and in turn help to provide solutions to the challenges that affect our planet, including offering a sustainable supply of food and energy, new industrial materials and processes, new bioactive compounds, and new health treatments. Marine compounds have been identified as having antibacterial, anticoagulant, antifungal, antimalarial, antiprotozoal, antituberculosis, and antiviral activities. The major sources of these bioactive compounds are marine sponges, coelenterates, and microorganisms, followed by algae, echinoderms, tunicates, molluscs, and bryozoans. The discovery of bioactive compounds from marine samples is a hot topic considering the current need for sustainable use of marine resources. This book is a comprehensive overview of the analytical techniques employed in the discovery and characterization of bioactive compounds isolated from (all possible) marine samples and gives future perspectives of analytical methodologies. This overview includes an assessment of the sampling and preparation of extracts, the separation and isolation of bioactive compounds, their structural characterization and the application of bioassays in the discovery of bioactive compounds. Comprehensive coverage of analytical techniques and applications. Clear diagrams to adequately support important topics. Real examples of applications of analytical techniques in the search for new bioactive compounds.
