How Bad Are Bananas? Mike Berners-Lee, 2011-04-01

Part green-lifestyle guide, part popular science, *How Bad Are Bananas?* is the first book to provide the information we need to make carbon-savvy purchases and informed lifestyle choices and to build carbon considerations into our everyday thinking. The book puts our decisions into perspective with entries for the big things (the World Cup, volcanic eruptions, the Iraq war) as well as the small (email, ironing, a glass of beer). And it covers the range from birth (the carbon footprint of having a child) to death (the carbon impact of cremation). Packed full of surprises – a plastic bag has the smallest footprint of any item listed, while a block of cheese is bad news – the book continuously informs, delights, and engages the reader. Solidly researched and referenced, the easily digestible figures, statistics, charts, and graphs (including a section on the carbon footprint of various foods) will encourage discussion and help people to make up their own minds about their consumer choices.

There Is No Planet B Mike Berners-Lee, 2019-02-28

Feeding the world, climate change, biodiversity, antibiotics, plastics - the list of concerns seems endless. But what is most pressing, what are the knock-on effects of our actions, and what should we do first? Do we all need to become vegetarian? How can we fly in a low-carbon world? Should we frack? How can we take control of technology? Does it all come down to population? And, given the global nature of the challenges we now face, what

on Earth can any of us do? Fortunately, Mike Berners-Lee has crunched the numbers and plotted a course of action that is practical and even enjoyable. There is No Planet B maps it out in an accessible and entertaining way, filled with astonishing facts and analysis. For the first time you'll find big-picture perspective on the environmental and economic challenges of the day laid out in one place, and traced through to the underlying roots - questions of how we live and think. This book will shock you, surprise you - and then make you laugh. And you'll find practical and even inspiring ideas for what you can actually do to help humanity thrive on this - our only - planet.

The Burning Question Mike Berners-Lee,Duncan Clark,2013-09-21 The Burning Question reveals climate change to be the most fascinating scientific, political and social puzzle in history. It shows that carbon emissions are still accelerating upwards, following an exponential curve that goes back centuries. One reason is that saving energy is like squeezing a balloon: reductions in one place lead to increases elsewhere. Another reason is that clean energy sources don't in themselves slow the rate of fossil fuel extraction. Tackling global warming will mean persuading the world to abandon oil, coal and gas reserves worth many trillions of dollars – at least until we have the means to put carbon back in the ground. The burning question is

whether that can be done. What mix of politics, psychology, economics and technology might be required? Are the energy companies massively overvalued, and how will carbon-cuts affect the global economy? Will we wake up to the threat in time? And who can do what to make it all happen?

Counting to Bananas Carrie Tillotson, 2022-04-12
A hilarious, mostly-rhyming picture book about a banana and narrator who can't quite agree on what their book is about. Perfect for fans of Mo Willems' *We Are in a Book* and Adam Rex's *Nothing Rhymes With Orange!* Mo Willems fans will give this book one, two, three, four, five stars! --Parents
Tillotson's rib-tickling debut is not to be missed!--Kirkus When a narrator starts filling this story with fruit, Banana can't wait to step into the spotlight. The book is called *Counting to Bananas*, after all. But as more and more fruits (and non-fruits) are added to the story, Banana objects. When will it be time for bananas?! With laugh-out-loud text from debut author Carrie Tillotson and brought to life by illustrator Estrela Lourenço this is the story of a banana and narrator who have very strong opinions about what should (and should not!) be in this book. The perfect next read for fans of Jory John and Pete Oswald's *The Bad Seed* series, as well as Ryan T. Higgins' *Hey, Bruce!* Praise for *Counting to Bananas*: In the tradition of Mac Barnett's *Count the Monkeys*, Tillotson's rib-tickling debut is not to be missed . . . Lourenço's digitally created illustrations of cartoon fruit with faces and

expressive animals are bright, dynamic, and foolish. Fruity fun for everyone. --Kirkus

No More Bananas Jeroen Kraaijenbrink, 2019-06-21
"Feel better, get done more and become a nicer person" In this age of social media, fake news, individualism and information overload, the certainties we relied on in the past are gone. In our quest for assurance and support, the only seemingly dependable pillar left is other people. So we look to them. But they are unsettled too. And by looking to them, we create and perpetuate our own vicious stress-cycle. As a result, we lose our sensible selves. And we go bananas. But there is good news. If we look around us, there are people who withstand the collective lunacy and stay grounded. They do something that most of us have a hard time doing: they stay themselves. And the best news is that what they can do, you can do too. It doesn't require any special talents or supernatural powers. It only requires doing. In this amiable, open and accessible book, Jeroen Kraaijenbrink takes you on his personal journey out of Bananaland. Drawing from cognitive psychology, martial arts, Saint Benedict, personal experience, and a wide range of other sources, the book offers a nine-step approach with some remarkably practical advice for keeping a cool head in the collective lunacy. "Free yourself from the collective lunacy and reclaim your calm and sensible self"

Life Between the Tides Adam Nicolson, 2022-02-22 Adam Nicolson explores the marine life inhabiting seashore rockpools with a scientist's curiosity and a poet's wonder in this beautifully illustrated book. The sea is not made of water. Creatures are its genes. Look down as you crouch

over the shallows and you will find a periwinkle or a prawn, a claw-displaying crab or a cluster of anemones ready to meet you. No need for binoculars or special stalking skills: go to the rocks and the living will say hello. Inside each rock pool tucked into one of the infinite crevices of the tidal coastline lies a rippling, silent, unknowable universe. Below the stillness of the surface course different currents of endless motion—the ebb and flow of the tide, the steady forward propulsion of the passage of time, and the tiny lifetimes of the rock pool’s creatures, all of which coalesce into the grand narrative of evolution. In *Life Between the Tides*, Adam Nicolson investigates one of the most revelatory habitats on earth. Under his microscope, we see a prawn’s head become a medieval helmet and a group of “winkles” transform into a Dickensian social scene, with mollusks munching on Stilton and glancing at their pocket watches. Or, rather, is a wrinkle more like Achilles, an ancient hero, throwing himself toward death for the sake of glory? For Nicolson, who writes “with scientific rigor and a poet’s sense of wonder” (*The American Scholar*), the world of the rock pools is infinite and as intricate as our own. As Nicolson journeys between the tides, both in the pools he builds along the coast of Scotland and through the timeline of scientific discovery, he is accompanied by great thinkers—no one can escape the pull of the sea. We meet Virginia Woolf and her *Waves*; a young T. S. Eliot peering into his own rock pool in Massachusetts; even Nicolson’s father-in-law, a classical scholar who would hunt

for amethysts along the shoreline, his mind on Heraclitus and the other philosophers of ancient Greece. And, of course, scientists populate the pages; not only their discoveries, but also their doubts and errors, their moments of quiet observation and their thrilling realizations. Everything is within the rock pools, where you can look beyond your own reflection and find the miraculous an inch beneath your nose. "The soul wants to be wet," Heraclitus said in Ephesus twenty-five hundred years ago. This marvelous book demonstrates why it is so. Includes Color and Black-and-White Photographs

How to Live a Low-Carbon Life Christopher Goodall, 2012-05-04 Drastic reduction of carbon emissions is vital if we are to avoid a catastrophe that devastates large parts of the world. Governments and businesses have been slow to act - individuals need to take the lead now if we are to avoid climate chaos. Each Westener is responsible for an average 10 - 20 tonnes of carbon emissions each year (depending on where you live). In *How to Live a Low-Carbon Life*, Chris Goodall shows how easy it is to take responsibility, providing a comprehensive, one-stop reference guide to calculating your CO2 emissions and reducing them to a more sustainable 2 tonnes a year.

Revenge Of The Green Banana Jim

She even forces him to perform onstage with second-graders, wearing a giant green banana costume. What could possibly go wrong?

What We Need to Do Now Chris Goodall,2020-02-06

The UK has declared a 'climate emergency' and pledged to become carbon neutral by 2050. So how do we get there? Drawing on actions, policies and technologies already emerging around the world, Chris Goodall sets out the ways to achieve this. His proposals include: -Building a huge over-capacity of wind and solar energy, storing the excess as hydrogen. -Using hydrogen to fuel our trains, shipping, boilers and heavy industry, while electrifying buses, trucks and cars. - Farming - and eating - differently, encouraging plant-based alternatives to meat -paying farmers to plant and maintain woodlands. -Making fashion sustainable and aviation pay its way, funding synthetic fuels and genuine offsets. -Using technical solutions to capture CO2 from the air, and biochar to lock carbon in the soil. What We Need To Do Now is an urgent, practical and inspiring book that signals a green new deal for Britain.

Living the 1.5 Degree Lifestyle Lloyd

Alter,2021-09-14 Stop thinking about efficiency

and start thinking about sufficiency Living the 1.5 Degree Lifestyle reveals the carbon cost of everything we do, identifying where we can make big reductions, while not sweating the small stuff. The international scientific consensus is that we have less than a decade to drastically slash our collective carbon emissions to keep global heating to 1.5 degrees and avert catastrophe. This means that many of us have to cut our individual carbon footprints by over 80% to 2.5 tonnes per person per year by 2030. But where to start? Drawing on Lloyd Alter's journey to track his daily carbon emissions and live the 1.5 degree lifestyle, coverage includes: What it looks like to live a rich and truly green life From take-out food, to bikes and cars, to your internet usage – finding the big wins, ignoring the trivial, and spotting marketing ploys The invisible embodied carbon baked into everything we own and why electric cars aren't the answer How to start thinking about sufficiency rather than efficiency The roles of individuals versus governments and corporations. Grounded in meticulous research and yet accessible to all, Living the 1.5 Degree Lifestyle is a journey toward a life of quality over quantity, and sufficiency over efficiency, as we race to save our only home from catastrophic heating.
