Though their huge skeletons are an impressive sight, much of our sense of childlike wonder comes from artistic depictions of them in books, museum murals and popular culture. It demonstrates how to interpret paleontological research through the lens of an artistic depiction with examples. Palaeoartist's Handbook Mark P Witton,2018-08-23 Extinct worlds live again in palaeoart: artworks of fossil animals, plants and environments carefully reconstructed from palaeontological and geological data. Such artworks are widespread in popular culture, appearing in documentaries, museums, books and magazines, and inspiring depictions of dinosaurs and other prehistoric animals in cinema. This book outlines how fossil animals and environments can be reconstructed from their fossils, explaining how palaeoartists overcome gaps in fossil data and predict 'soft-tissue' anatomies no longer present around fossil bones. It goes on to show how science and art can meet to produce compelling, interesting takes on ancient worlds, and it explores the goals and limitations of this popular but rarely discussed art genre. Multiple chapters with dozens of illustrations of fossil animal reconstruction, with specific guidance on fossil amphibians, mammals and their fossil relatives, and a myriad of fossil reptiles (including dinosaurs). Explores how best to present diverse fossil animal forms in art - how best to convey size, proportion and motion in landscapes without familiar reference points. Explains essential techniques for the aspiring palaeoartists, from understanding geological time and evolutionary relationships to rebuilding skeletons and muscles. Suggests where and how to gather reliable sources of data for palaeoartworks. Includes a history of palaeoart, outlining the full evolution of the medium from ancient times to the modern day. Examines stylistic variation in palaeoart. Showcases diverse artworks from world-leading contemporary palaeoartists. Palaeoartistry is a popular but rarely discussed art genre. This new book outlines how fossil animals and environments can be reconstructed from their fossils. Of great interest to everyone interested in palaeoartistry, dinosaurs, natural history and fossils. Superbly illustrated with 195 colour images. Dr Mark P Witton is an author, palaeontological artist and researcher whose palaeoartworks have featured in numerous research papers, television shows, museums and art galleries.

Recreating an Age of Reptiles Mark P Witton,2017-06-30 Dinosaurs and other prehistoric animals have always fascinated people but they pose vast problems for the artist. How do you go about recreating the anatomy and behaviour of a creature we've never seen? How can we restore landscapes long lost to time? And where does the boundary between palaeontology - the science of understanding fossils- and artistic licence lie? In this outstanding book, Mark Witton shares his detailed paintings and great experience of drawing and painting extinct species. The approaches used in rendering these impressive creatures are discussed and demonstrate the problems, as well as the unexpected freedoms, that palaeontological artists are faced with. The book showcases over ninety scientifically credible paintings of some of the most spectacular animals in the Earth's history, as well as may less familiar species. Mark explains how each image was created with details of the artistic process, scientific grounding and collaborations between researchers and discusses the methods and goals of palaeoartistry - the recreation of extinct animals and landscapes in art.
