The Journey of a Thousand Years Benjamin Wasden,2014-02-11 The first rocket heading off for Mars to land on it, however something doesn't go to plan on their way there and back..... The year is 2030 on Earth. NASA has designed an enormous rocket that is meant to go to Mars. After the recent tragedy of Orion 8, they decide to launch Orion 9, which will be commanded by Matthew Psy. His MEM pilot is Sean Argon, and Pilot, Reed Jupiter. They are meant to take Orion 8's place as the first landing on Mars, but something happens that no one has ever expected in a rocket.....

Rocket to the Moon! Don Brown,2019-03-05 On July 20, 1969, Neil Armstrong took “one small step for man, one giant leap for mankind” when the Apollo 11 landed on the moon. But it wasn’t just one man who got us to the moon. *Rocket to the Moon!* explores the people and technology that made the moon landing possible. Instead of examining one person’s life, it focuses on the moon landing

itself, showing the events leading up to it and how it changed the world. The book takes readers through the history of rocket building: from ancient Chinese rockets, to “bombs bursting in air” during the War of 1812, to Russia’s Sputnik program, to the moon landing. Beautifully illustrated and well-researched, this book is the perfect resource for curious readers and tomorrow’s scientists. It includes a timeline of space travel, a bibliography, and an index.

Big Book of Rockets and Spacecraft Louie Stowell, 2015 Providing a fascinating insight into the world of space travel, this big book features a wide range of spaceships, shuttles, rockets, satellites and the International Space Station. With four huge, fold-out pages which allow children to marvel at the scale of outer space and see in detail the complexity of these marvels of science and engineering.

Building Reusable Rockets Gregory L. Vogt, 2018-01-01 Explores scientists' thrilling quest to build reusable rockets. Engaging text, vibrant photos, and informative infographics help readers learn about this important advancement in exploring space, as well as the people and technology that made it possible.

Big Stuff Planes, Rockets, Spacecraft! Joan Holub,2022-07-19 From the author of the bestselling *This Little* series comes the first in a new line of board books about the science behind everyday things—this one about things that fly! Show little ones how big vehicles work and introduce the inventors behind them through simple rhyming text and vibrant illustrations with this engaging board book. From hot air balloons to airplanes to spacecrafts and beyond, *Big Stuff Planes, Rockets, Spacecraft!* connects the dots between people and the technology they create and gives age-appropriate explanations of scientific concepts like rocket propulsion and power hydraulics!

Reggie The Rocket Douglas Anderson, 2015-04-07 The story of Reggie The Rocket closely tracks the history of the 1960s British Blue Streak rocket program. The author Douglas Anderson worked on the assembly and testing of the Rolls-Royce RZ2 engines powering the Blue Streak and was present in Woomera, Australia, for the launch of F3. Based on that experience, Douglas has assigned a personality to the rockets and has thus woven a whimsical element into an otherwise historical account of the Blue Streak Program. Reggie The Rocket is F3, the third in line to be launched, and Douglas was there to cheer him on. It is a sad reality that most heavy-lift booster rockets have been launched only to return to earth as scrap metal or to have disappeared into the ocean depths. Only now, fifty years after Blue Streak, are serious attempts being made to return booster rockets safely back to the launch pad under their own power so they can be reused. The days of 'throw away' rockets must surely come to an end if humans are to continue with orbital flights and deep space exploration.

My Big Silver Rocket Ship Stephen T. Johnson, 2022-09-06 Blast off with this incredibly innovative novelty book that contains puzzle pieces young readers can use to build their own rocket ship—from

bestselling and Caldecott Honor artist Stephen T. Johnson! From innovative book creator Stephen T. Johnson comes an introduction to space exploration for the youngest reader. This simple step-by-step guide to the parts of a rocket ship has sturdy, ultra-thick cardboard pages containing all the necessary components as well as clear instructions for assembly. The flat pieces fit together with slots and tabs, which means there's no glue and no mess—just a lot of fun!

Space 2.0 Rod Pyle, 2019-02-26 We're on the cusp of new era in the great adventure of space exploration. More than a half-century ago, humanity first hurled objects into space, and almost 50 years ago, astronauts first walked on the moon. Since then, we have explored Earth's orbit with shuttles, capsules, and space stations; sent robots to Mars, Venus, Mercury, Jupiter, Saturn, and Uranus; sampled a comet; sent telescopes into orbit; and charted most of our own planet. What does the future hold? In Space 2.0, space historian Rod Pyle, in collaboration with the National Space Society, will give you an inside look at the next few decades of spaceflight and long-term plans for exploration, utilization, and settlement. No longer the exclusive domain of government entities such as

NASA and other national agencies, space exploration is rapidly becoming privatized, with entrepreneurial startups building huge rocket boosters, satellites, rocket engines, asteroid probes, prospecting craft, and even commercial lunar cargo landers to open this new frontier. Research into ever more sophisticated propulsion and life support systems will soon enable the journey to Mars and destinations deeper in our solar system. As these technologies continue to move forward, there are virtually no limits to human spaceflight and robotic exploration. While the world has waited since the Apollo lunar program for the next giant leap, these critical innovations, most of which are within our grasp with today's technology, will change the way we live, both in space and on Earth. A new space age—and with it, a new age of peace and prosperity on Earth, and settlement beyond our planet—can be ours. Speaking with key leaders of the latest space programs and innovations, Pyle shares the excitement and promise of this new era of exploration and economic development. From NASA and the Russian space agency Roscosmos, to emerging leaders in the private sector such as SpaceX, Blue Origin, Moon Express, Virgin Galactic, and many others, Space 2.0 examines the new

partnerships that are revolutionizing spaceflight and changing the way we reach for the stars.

Rocket and the Queen of Diamonds Comic Collection M. L. J. Comics, 2017-08-21 EMAIL US FOR OUR GIANT CLASSIC COMICS CATALOG!...One day a huge rocket ship crashed into the Diamond Empire, hidden for ages behind its impassible barriers. The stranger from the outsideworld, at the controls of the ship, mysteriously identifies himself as 'THEROCKET.' Through his unusual strength and great valor, THE ROCKET won the confidence of the empire's beautiful Queen --- He became 'SIR ROCKET'- the captain of her guards! The Science-fiction comics of the 1940s-1950s were wildly imaginative, incredibly colorful, and very popular. It was in the day before the space race began, when everything was left to the imagination. From these amazing days comes THE ROCKET AND THE

QUEEN OF DIAMONDS!THE COMICS OF THIS ERA were often racially, politically and socially insensitive. Rather than edit or censor the material, we offer them as originally presented, and ask that if the material offends you, you will overlook it. How Do Engineers Reuse Rockets? Arnold Ringstad, 2019-05-01 Reusable rockets are making space travel cheaper and more common. Read this book to discover how engineers bring huge

rockets to a safe, gentle landing.

To a Distant Day Chris Gainor, 2020-04-01 Insightful, instructive, and definitely worth the read.--
Greg Andres, Journal of the Royal Astronomical Society of Canada As someone who has been teaching a course on space exploration for many years and has visited most of NASA's space centers, I have found plenty of new and valuable material in *To a Distant Day*. . . . I recommend the book to all who wish to know more about the conditions, people, and discoveries between 1890 and 1960 that led to the space age.--Pangratios Papacosta, Physics Today Although the dream of flying is as old as the human imagination, the notion of rocketing into space may have originated with Chinese gunpowder experiments during the Middle Ages. Rockets as both weapons and entertainment are examined in this engaging history of how human beings acquired the ability to catapult themselves into space. Chris Gainor's irresistible narrative introduces us to pioneers such as Konstantin Tsiolkovsky, Robert Goddard, and Hermann Oberth, who pointed the way to the cosmos by generating the earliest wave of international enthusiasm for space exploration. It shows us German engineer Wernher von Braun

creating the V-2, the first large rocket, which, though opening the door to space, failed utterly as the wonder weapon it was meant to be. From there Gainor follows the space race to the Soviet Union and the United States, giving us a close look at the competitive hysteria that led to Sputnik, satellites, space probes, and--finally--human flight into space in 1961. As much a story of cultural ambition and personal destiny as of scientific progress and technological history, *To a Distant Day* offers a complete and thoroughly compelling account of humanity's determined efforts--sometimes poignant, sometimes amazing, sometimes mad--to leave the earth behind.

One Giant Leap Charles Fishman, 2020-09-22 The New York Times bestselling, “meticulously researched and absorbingly written” (The Washington Post) story of the trailblazers and the ordinary Americans on the front lines of the epic Apollo 11 moon mission. President John F. Kennedy astonished the world on May 25, 1961, when he announced to Congress that the United States should land a man on the Moon by 1970. No group was more surprised than the scientists and engineers at NASA, who suddenly had less than a decade to invent space travel. When Kennedy announced that

goal, no one knew how to navigate to the Moon. No one knew how to build a rocket big enough to reach the Moon, or how to build a computer small enough (and powerful enough) to fly a spaceship there. No one knew what the surface of the Moon was like, or what astronauts could eat as they flew there. On the day of Kennedy's historic speech, America had a total of fifteen minutes of spaceflight experience—with just five of those minutes outside the atmosphere. Russian dogs had more time in space than US astronauts. Over the next decade, more than 400,000 scientists, engineers, and factory workers would send twenty-four astronauts to the Moon. Each hour of space flight would require one million hours of work back on Earth to get America to the Moon on July 20, 1969. "A veteran space reporter with a vibrant touch—nearly every sentence has a fact, an insight, a colorful quote or part of a piquant anecdote" (The Wall Street Journal) and in *One Giant Leap*, Fishman has written the sweeping, definitive behind-the-scenes account of the furious race to complete one of mankind's greatest achievements. It's a story filled with surprises—from the item the astronauts almost forgot to take with them (the American flag), to the extraordinary impact Apollo would have back on Earth, and

on the way we live today. From the research labs of MIT, where the eccentric and legendary pioneer Charles Draper created the tools to fly the Apollo spaceships, to the factories where dozens of women sewed spacesuits, parachutes, and even computer hardware by hand, Fishman captures the exceptional feats of these ordinary Americans. “It’s been 50 years since Neil Armstrong took that one small step. Fishman explains in dazzling form just how unbelievable it actually was” (Newsweek).
