CHAPTER XI THE NERVOUS SYSTEM Parts of the nervous system.--The nervous system is composed of five important parts, (i) One large nerve-centre--the brain. (2) A long nerve-centre in the spinal column--the spinal cord. (3) Many small nerve-centres--the ganglia--found at many places in the body. (4) The nerves which run from the nerve-centres out to every part of the body. (5) Nerve endings, as where a nerve ends in a muscle or gland. The nerve-cell.--The nervous system is composed of cells just as other parts of the body are, but they are quite different in shape. A nerve-cell in the spinal cord may have to control a cell of muscle in the hand. It must then be able to reach all the way from the cord to the hand. So we find that most nerve-cells have long branches running out from them. 14 209 As a rule, there is only one very long branch and a number of small ones. In Fig. 68 you can see the parts of a nerve-cell. It has a body and a nucleus, and is composed of the same kind of material as the other cells; but it is different in having the long branch that may reach out two or three feet from the body of the cell to another cell over which it has control. When we use any of the skeletal muscles, we must first send an order out on the long branches of the nerve-cells to the muscle-cells. When a large number of these cells are clustered together they are called a nervecentre, and a number of the long branches bound together are called a nerve. All the nerve-centres are in the brain, the spinal cord, and the ganglia. Everything we do and every movement we make starts in the nerve-centres. The brain.--The brain is the most important part of the human body. It is very delicate and easily injured, and so we find it well protected. It is...

Anatomy 360 Jamie Roebuck,2018-02-06 With Anatomy 360, you'll get a complete picture of every part of your body—from your head to your toes, inside and out, and from every angle. Our bodies are a mystery to us. We see our arms and legs move, but may have no idea how the muscles beneath look as they contract. We know that our stomachs digest food and our hearts pump blood, but the images we have in our heads of these organs are often inaccurate or incomplete. Even seeing pictures of our internal systems and organs can be misleading if these pictures don't offer a full, 360-degree view. This new flexibound edition of Anatomy 360 shows the human body in its entirety—from the skin to the muscles to the organs to the bones. This stunning book provides a unique perspective on our most crucial parts, showing how the structures of our bodies influence their functions. You'll learn about the vagus nerve, which allows us to swallow, speak, and cough, and the frontalis muscle, which raises our eyebrows when we're surprised. You'll also learn why our noses run when we cry and why our brains are so important even though they weigh just one kilogram each. With Anatomy 360, you'll finally get a complete look at the human body—even the parts you thought you'd never see! The hardcover edition of Anatomy 360 won the Gold Award in Reference from ForeWord’s 2011 Book of the Year Awards
