Hurricanes of the North Atlantic James B. Elsner, A. Birol Kara, 1999 As people continue to develop coastal areas, society's liability to hurricanes will dramatically increase, regardless of changes in the environment. This book addresses these key issues, providing a detailed examination of

Hurricane Season Fernanda Melchor, 2020-10-06 The English-language debut of one of the most thrilling and accomplished young Mexican writers Winner of the Queen Sofía Spanish Institute's Translation Prize Longlisted for the National Book Award Shortlisted for the Booker Prize Winner of the Internationaler Literaturpreis New York Public Library Best Books of 2020 Chicago Public Library Best Book of 2020 The Witch is dead. And the discovery of her corpse has the whole village investigating the murder. As the novel unfolds in a dazzling linguistic torrent, with each unreliable narrator lingering on new details, new acts of depravity or brutality, Melchor extracts some tiny shred of humanity from these characters—innies whom most people would write off as irredeemable—forming a lasting portrait of a damned Mexican village. Like Roberto Bolaño's 2666 or Faulkner's novels, Hurricane Season takes place in a world saturated with mythology and violence—real violence, the kind that seeps into the soil, poisoning everything around: it's a

world that becomes more and more terrifying the deeper you explore it.

The Galveston Hurricane Kristine Brennan, 2002 An account of the tragic Galveston hurricane of 1900 that claimed over six thousand lives.

Hurricane Climatology James B. Elsner, Thomas H. Jagger, 2013-02-04 Hurricanes are nature's most destructive storms and they are becoming more powerful as the globe warms. *Hurricane Climatology* explains how to analyze and model hurricane data to better understand and predict present and future hurricane activity. It uses the open-source and now widely used R software for statistical computing to create a tutorial-style manual for independent study, review, and reference. The text is written around the code that when copied will reproduce the graphs, tables, and maps. The approach is different from other books that use R. It focuses on a single topic and explains how to make use of R to better understand the topic. The book is organized into two parts, the first of which provides material on software, statistics, and data. The second part presents methods and models used in hurricane climate research.

The Hurricane Roger A Pielke, 2013-12-19 First published in 1990, this book describes the nature of the hurricane, one of the world's most dangerous weather hazards. It examines the formation, development, movement, and impact of these tropical cyclones, and assess the ability of science to describe, forecast, and control them.

Interfaces in Computer Science and Operations Research R. S. Barr, R.V. Helgason, Jeffrey L. Kennington, 2012-12-06 The disciplines of computer science and operations research (OR) have been linked since their origins, each contributing to the dramatic advances of the other. This work explores the connections between these key technologies: how high-performance computing methods have led to advances in OR deployment,

and how OR has contributed to the design and development of advanced systems. The collected writings—from researchers and practitioners in Computer Science, Operations Research, Management Science, and Artificial Intelligence—were among those delivered at the Fifth INFORMS Computer Science Technical Section Conference in Dallas, Texas, January 8–10, 1996. The articles advance both theory and practice. Presented are new approaches to complex problems based on: metaheuristics (neural networks, genetic algorithms, and Tabu Search), optimization and mathematical programming, stochastic methods, constraint programming, and logical analysis. These advanced methodologies are applied to new applications in such areas as: telecommunications network design, financial engineering, manufacturing, project management, and forecasting, airline and machine scheduling, vehicle routing, modeling and decision support systems. Featured is a remarkable paper by keynote speaker Fred Glover, creator of the Tabu Search family of metaheuristics. In it he develops the principles of memory-based heuristic methods, contrasts them with the popular genetic algorithms and simulated annealing, provides a sweeping survey of application vignettes, and points to promising avenues for future research.

Hurricanes Paul V. Kislow, 2008 A hurricane is a tropical storm with winds that have reached a constant speed of 74 miles per hour or more. Hurricane winds blow in a large spiral around a relative calm centre known as the eye. The eye is generally 20 to 30 miles wide, and the storm may extend outward 400 miles. As a hurricane approaches, the skies will begin to darken and winds will grow in strength. As a hurricane nears land, it can bring torrential rains, high winds, and storm surges. A single hurricane can last for more than 2 weeks over open waters and can run a

path across the entire length of the eastern seaboard. August and September are peak months during the hurricane season that lasts from 1 June to 30 November. This book presents the facts and history of hurricanes.

Mariners Weather Log ,1996 November issue includes abridged index to yearly volume, -1981.

Global Perspectives on Tropical Cyclones , Effects of Hurricane Andrew on Natural and Archeological Resources ,1996

Hurricane Andrew Kristine Harper,2005 Details the course and effect of Hurricane Andrew, which hit the southeastern United States in 1992, and describes the recovery efforts that followed the storm.

The Hurricane Roger A Pielke,2013-12-19 First published in 1990, this book describes the nature of the hurricane, one of the world's most dangerous weather hazards. It examines the formation, development, movement, and impact of these tropical cyclones, and assess the ability of science to describe, forecast, and control them.

Characteristics of the Hurricane Storm Surge D. Lee Harris,United States. Weather Bureau,1963 Because of this lack of basic data, theoretical research has been largely restricted to calculations based on unverified postulates concerning the phenomena involved and on attempts to evaluate them by the available empirical data. Although studies of this kind have led to a better understanding of the phenomena, they have not led to the development of any outstandingly successful prediction systems.

The Great Hurricane of 1780 Wayne Neely,2012-09-17 The Great Hurricane of 1780, also known as Hurricane San Calixto II, is one of the most powerful and deadliest North Atlantic hurricanes on record. Often regarded as a cataclysmic hurricane, the storm's worst effects were experienced on October 10, 1780. In The Great

Hurricane of 1780, author Wayne Neely chronicles the chaos and destruction it brought to the Caribbean. This storm was likely generated in the mid Atlantic, not far from the equator; it was first felt in Barbados, where just about every tree and house on the island was blown down. The storm passed through the Lesser Antilles and a small portion of the Greater Antilles in the Caribbean between October 10 and October 16 of 1780. Because the storm hit several of the most populous islands in the Caribbean, the death toll was very high. The official death toll was approximately 22,000 people but some historians have put the death toll as high as 27,500. Specifics on the hurricane's track and strength are unclear since the official North Atlantic hurricane database only goes back as far as 1851. Even so, it is a fact that this hurricane had a tremendous impact on economies in the Caribbean and parts of North America, and perhaps also played a major role in the outcome of the American Revolution. This thoroughly researched history considers the intense storm and its aftermath, offering an exploration of an important historical weather event that has been neglected in previous study.
