HIV Interactions with Host Cell Proteins Paul Spearman, Eric O. Freed, 2009-12-11 The study of viruses necessarily involves dissecting the intimate details of cellular pathways. Viruses have often been employed as tools in studying cellular pathways, as was done by early retrovirologists such as Peyton Rous in attempting to understand the mechanism of cellular transformation and oncogenesis. On the other side of the coin, virologists seek to define those cellular elements interacting intimately with their virus of interest in order to better understand viral replication itself, and in some cases to develop antiviral strategies. It is in the intersection of virology and cell biology that many of us find the most rewarding aspects of our research. When a new discovery yields insights into basic cellular mechanisms and presents new targets for intervention to fight a serious pathogen, the impact can be high and the excitement intense. HIV has been no exception to the rule that viruses reveal many basic aspects of cellular biology. In recent years, in part because of the importance of HIV as a major cause of human suffering, numerous cellular processes have been elucidated through work on processes or proteins of this human retrovirus. The excitement in this field is especially well illustrated by the discovery of new innate means of resisting viral replication, such as the work on APOBEC3G, TRIM5a, and BST-2/ tetherin presented in this volume.

HIV and Mobile Workers Eleonore Caraël, International Organization for Migration, Joint United Nations Programme on HIV/AIDS., 2005 This publication examines HIV-related risks and programmes for mobile workers, focusing on truckers in West Africa, with references to South Asia in order to highlight similarities when the profession is the same, but the region is different. The report identifies living and working conditions that put truckers at risk of HIV and other sexually transmitted infections, with examples of programmes aimed at promoting behaviour change among truckers; and sets out recommendations for further research and programme strategies to address this issue.

Culture, Risk and HIV/AIDS Among Migrant and Mobile Men in Goa, India Ajay Bailey, 2008

Cell Activation and Apoptosis in HIV Infection Jean-Marie Andrieu, Wei Lu, 2012-12-06 In the past decade, the global efforts in the control of HIV disease were basically concentrated on the search for anti-retroviral agents. So far, anti-HIV therapies have been shown to be disappointing because of rapid development of drug-resistant mutant variants. Despite this

drawback in the therapeutic fight against HIV infection, antiviral research should be actively pursued. However, failure of antiviral therapy indicates that other avenues of research should be rapidly explored with the same energy. In this setting, striking advances have been recently made in the dissection and understanding of the viro-immunological processes governing the progressive destruction of lymphoid organs associated with AIDS development, and HIV-induced activation and apoptosis have been identified as key phenomena of the immune system destruction. This book assembles the most recent advances on basic and clinical aspects of T-cell activation/apoptosis in HIV infection and their implications for immunotherapy. These data were presented at an international symposium held on July 11-12, 1994, in Paris. The book is partitioned into 21 chapters covering four comprehensive fields: 1) T-cell/macrophage activation and HIV infection; 2) Apoptosis and viropathogenesis of HIV disease; 3) Apoptosis and immunopathogenesis of HIV disease; 4) Mediators of T-cell activation/apoptosis and therapeutic applications. We hope that this book will assist the readers in understanding recent advances in the viro-immunopathogenesis of HIV disease as well as the rationales for potential immune cell-targeted therapeutic interventions.

Mobile DNA III Michael Chandler, Martin Gellert, Alan M. Lambowitz, Phoebe A. Rice, Suzanne B. Sandmeyer, 2020-07-24 An exploration of the raw power of genetic material to refashion itself to any purpose... Virtually all organisms contain multiple mobile DNAs that can move from place to place, and in some organisms, mobile DNA elements make up a significant portion of the genome. Mobile DNA III provides a comprehensive review of recent research, including findings suggesting the important role that mobile elements play in genome evolution and stability. Editor-in-Chief Nancy L. Craig assembled a team of multidisciplinary experts to develop this cutting-edge resource that covers the specific molecular mechanisms involved in recombination, including a detailed structural analysis of the enzymes responsible presents a detailed account of the many different recombination systems that can rearrange genomes examines the tremendous impact of mobile DNA in virtually all organisms Mobile DNA III is valuable as an in-depth supplemental reading for upper level life sciences students and as a reference for investigators exploring new biological systems. Biomedical researchers will find documentation of recent advances in understanding immune-antigen conflict between host and pathogen. It introduces biotechnicians to amazing tools for in vivo control of designer DNAs. It allows specialists to pick and choose advanced reviews of specific elements and to be drawn in by unexpected parallels and contrasts among the elements in diverse organisms. Mobile DNA III provides the most lucid reviews of these complex topics available anywhere.

HIV/AIDS and Mobile Populations in the Caribbean Rosilyne Borland, 2004 Given the high level of population movement and the high prevalence of HIV infection in the Caribbean, the link between mobility and the spread of HIV/AIDS is an important dimension of the region's epidemic. The Caribbean now ranks second only to sub-Saharan Africa as the most affected region in the world. Many of the same factors that drive the spread of HIV/AIDS also drive migration, such as unbalanced distribution of resources, unemployment, political instability and conflict. Recognizing the above, the International Organization for Migration (IOM) Santo Domingo has undertaken HIV/AIDS and Mobil.

The Spread of HIV/Aids in Mobile Populations Asrul Sani, 2010-09 Since the first cases of HIV/AIDS disease were recognised in the early 1980s, a large number of mathematical models have been proposed. However, the mobility of people, which has an obvious impact on the spread of the disease, has not been much considered in the modelling studies. This book provides various new results pertaining to the spread of the disease, including epidemic intervention, in mobile populations. The results can serve as a basic framework how to formulate and analyse a more realistic stochastic model for the spread of HIV in mobile heterogeneous populations - classifying all individuals by age, risk,

and at the same time considering different modes of the disease transmission. Some strategies such as how to allocate a limited budget to minimise the number of new HIV cases over a finite time horizon as people move among regions might provide some useful information in controlling the spread of the disease. A novel approach using the Cross-Entropy (CE) method is introduced to solve such highly non-linear and multidimensional problems. This book, therefore, should be especially useful to those interested in Epidemic Modelling, Analysis, and Simulation fields.

Economics and HIV Deborah Johnston, 2013-05-29 This book explains how, and why, economics has been applied to a terrible pandemic, using a range of examples mostly drawn from the region most affected, sub-Saharan Africa. Part I shows that microeconomic approaches have found fertile ground in a public health approach that 'blames' individual choices for HIV transmission. Despite their attractiveness, however, these approaches fail to explain contemporary patterns of HIV prevalence, illustrating the importance of factors that are excluded from the standard micro-economic approach. Part II of the book looks at our problems in understanding the economic impact of AIDS, and explains why economists cannot agree if epidemic disease is a good or bad thing for economic development. In both sections of the book, the potential for alternative approaches is shown, and the book ends by arguing that a political economy approach can bring meaningful insights to our understanding of the spread and impact of HIV/AIDS.

mHealth Innovation in Asia Emma Baulch, Jerry Watkins, Amina Tariq, 2017-12-23 This book offers a detailed account of a range of mHealth initiatives across South, Southeast and East Asia. It provides readers with deep insights into the challenges such initiatives face on the ground, and a view of the diverse cultural contexts shaping strategies for overcoming these challenges. The book brings together various discussions on the broader mHealth literature, and demonstrates how a research focus on diverse Asian contexts influences the success and/or failure of current mHealth initiatives. It also highlights the important roles social scientists can play in advancing theoretical approaches, as well as planning, implementing and evaluating mHealth initiatives. The book is a valuable resource for project planners, policy developers in NGOs and government institutions, as well as academics, researchers and students in the fields of public health, communications and development studies. HIV Testing Ricardo Diaz, 2012-01-18 It can be said that now is the best time for everyone infected to become aware of their own HIV status. The state of the art in HIV management progressively reveals that antiretroviral treatment can prevent transmission, as well as chronic damage in the human body, if started early. Unfortunately, antiretrovirals are not widely available in many places, especially in developing countries. In these parts of the world, diagnosis of HIV infection must be kept in the agenda as a priority, in order to understand specific details of local epidemics and as an effort to interrupt the chain of HIV transmission.

Gendered Power and Mobile Technology Caroline Wamala Larsson, Laura Stark, 2019-05-31 Mobile phones are widely viewed as the information and communication technology that holds the most promise for bridging global digital divides. *Gendered Power and Mobile Technology* uses empirical research to focus on changing intersections between technology, gender and other categories of social and cultural power difference (such as age, race, class, and ethnicity) in the use of mobile communication technologies. Asking how these intersections can inform development discourse, practice, and research, this volume seeks to rectify the lack of attention to the Global South, calling for more sensitivity to the contexts and consequences of mobile phone use. Indeed, drawing on case studies from Ecuador, Ghana, Kenya, Mexico, Peru, Tanzania, and Uganda, this book engages with the intersectionality paradigm to tease out the complexities of using mobile technologies for development purposes. *Gendered Power and Mobile Technology* will appeal to students and researchers interested in fields such as media studies, development studies, gender and technology, feminist technoscience, anthropology, and sociology.

Comprehensive Services for HIV-Infected Pregnant Women and Their Newborns: Seven Case Studies, Etc., April 1998, 1998

The African Mobile Story Knud Erik Skouby, Williams Idongesit, 2022-09-01 Africa and especially Sub-Saharan Africa has during the past decade witnessed one of the fastest growing markets in mobile communication. This growth is recognized to have played a pivotal role in Africa's socio-economic development. It has had a huge impact on residential living patterns; on business networks and models; and on government services and income sources. The mobile industry has contributed more to economic growth than in any other comparable region globally introducing innovative, broadly used applications. Technical topics discussed in the book include: • Mobile Development in Sub-Saharan Africa; • Telecom Liberalization in Africa; • Role of Mobile in Socio-economic Development; • Mobile Applications in specific sectors; • Security in African Mobile; • Role of Prepaid in Africa

Mobility, Sexuality and AIDS Felicity Thomas, Mary Haour-Knipe, Peter Aggleton, 2009-10-16 Over the past two decades, population mobility has intensified and become more diverse, raising important questions concerning the health and well-being of people who are mobile as well as communities of origin and destination. Ongoing concerns have been voiced about possible links between mobility and HIV, with calls being made to contain or control migrant populations, and debate linking HIV with issues of global security and surveillance being fuelled. This volume challenges common assumptions about mobility, HIV and AIDS. A series of interlinked chapters prepared by international experts explores the experiences of people who are mobile as they relate to sexuality and to HIV susceptibility and impact. The various chapters discuss the factors that contribute to the vulnerability of different mobile groups but also examine the ways in which agency, resilience and adaptation shape lived experience and help people protect themselves throughout the mobility process. Looking at diverse forms of migration and mobility – covering flight from conflict, poverty and exploitation, through labour migration to 'sex tourism' – the book reports on research findings from around the world, including the USA, the UK, sub-Saharan Africa, Australia, Central America and China. *Mobility, Sexuality and AIDS* recognises the complex relationships between individual circumstances, population mobility and community and state response. It is invaluable reading for policy makers, students and practitioners working in the fields of migration, development studies, anthropology, sociology, geography and public health.
