Pharma-Nutrition Gert Folkerts,Johan Garssen,2014-07-08 Natural products and functional/medical foods are now widely acknowledged as having an effect on the microbiome of the intestine, which in turn influences the outcome of certain disease. This book reviews the impact and effects of natural products and functional/medical foods (nutritional programming) on disease management, specifically focusing on diseases related to 1) Inflammation and Immunity, 2) Cancer, COPD and Cachexia, 3) Allergy and 4) Brain Neuro/Immune. Hippocrates said let medicine be thy food and food be thy medicine. While most of us are familiar with Hippocrates famous words, we admit that in recent times, the disciplines of pharma and nutrition have evolved separately. Today, with the ever growing burden of diseases in modern society, we see a convergence of the two in relation to specific disease prevention and treatment. This re-discovered common ground between the complementary values of pharma and nutrition can be conceptualized in the term pharma-nutrition. Various chapters in the book review the aspects of molecular characteristics of food ingredients

towards clinical effectiveness and relevance.

Global Food Systems, Diets, and Nutrition Jessica Fanzo, Claire Davis, 2021-06-05 Ensuring optimal diets and nutrition for the global population is a grand challenge fraught with many contentious issues. To achieve food security for all and protect health, we need functional, equitable, and sustainable food systems. Food systems are highly complex networks of individuals and institutions that depend on governance and policy leadership. This book explains how interconnected food systems and policies affect diets and nutrition in high-, middle-, and low-income countries. In tandem with food policy, food systems determine the availability, affordability, and nutritional quality of the food supply, which influences the diets that people are willing and able to consume. Readers will become familiar with both domestic and international food policy processes and actors, and they will be able to critically analyze and debate how policy and science affect diet and nutrition outcomes.
