**Qr Codes in Education** David Hopkins, 2013-05 These black and white squares have appeared everywhere from billboards at the side of the road, roof tops, cola cans, buses, magazines, etc. So why not in your library, textbook, assignment, project, or classroom display? The ability to use them to direct students or colleagues to online resources (presentation slides, websites, video, book location, etc.) is powerful and engaging and, when well implemented, can offer a level of interaction and engagement. It's not about what they are but about how we use them and what they can offer me in an educational setting. Whether you're a teacher, student, parent, school governor, or on the

PTA, you ought to know about QR Codes – what they are, how they work, and how you can leverage them to increase student participation in and around the classroom. They offer the ability to share digital content from teacher to student, from student to student, and even from student to teacher. Go on, try it! This eBook will explain everything and put QR Codes in context. Using computers and technology in educational environments can be exciting and challenging. Implementing QR Codes within your student's learning is just that: exciting to see how students of all ages use and interact with them, and a challenge to make them usable, informative, applicable, and appropriate. This book draws on established examples from the commercial and corporate world as well as from established users of QR Codes at all levels of education; from primary schools up to Universities. Not only will you find examples of how QR Codes have been used but you will find out how you can design, create, and implement your own QR Code treasure hunt, library resource, student group work, orientation activity, conference or event feedback, etc. David Hopkins has developed a respected reputation among educational technology networks for his use and research into the uses of QR Codes. He has been active with QR Codes at Bournemouth University and more recently at the University of Leicester since 2008. Mobile Computing, Applications, and Services Petros Zerfos, Rebecca Montanari, Thomas Phan, 2010-05-11 This proceedings volume includes the full research papers presented at the First International Conference on Mobile Computing, Applications, and Services (MobiCASE) held in San Diego, California, during October 26-29, 2009. It was sponsored by ICST and held in conjunction with the First Workshop on Innovative Mobile User Interactivity (WIMUI). MobiCASE highlights state-of-the-art academic and industry research work in - main topics above the OSI transport layer with an emphasis on complete end-to-end systems and their components. Its vision is largely influenced by what we see in the consumer space today: high-end mobile phones, high-bandwidth wireless networks, novel consumer and enterprise mobile applications, scalable software infrastructures, and of course an increasingly larger user base that is moving towards an almost a- mobile lifestyle. This year's program spanned a wide range of research that explored new features, algorithms, and infrastructure related to mobile platforms. We received submissions from many countries around the world with a high number from Europe and Asia in addition to the many from North America. Each paper received at least three independent reviews from our Technical Program Committee members during the Spring of 2009, with final results coming out in July. As a result of the review process, we selected 15 high-quality papers and complemented them with six invited submissions from leading researchers, reaching the final count of 21 papers in the program.

Trust Geoffrey Hosking,2014-08-07 Today there is much talk of a 'crisis of trust'; a crisis which is almost certainly genuine, but usually misunderstood. Trust: A History offers a new perspective on the ways in which trust and distrust have functioned in past societies, providing an empirical and historical basis against which the present crisis can be examined, and suggesting ways in which the concept of trust can be used as a tool to understand our own and other societies. Geoffrey Hosking argues that social trust is mediated through symbolic systems, such as religion and money, and the institutions associated with them, such as churches and banks. Historically these institutions have nourished trust, but the resulting trust networks have tended to create quite tough boundaries around themselves, across which distrust is projected against outsiders. Hosking also shows how nation-states have been particularly good at absorbing symbolic systems and generating trust among large

numbers of people, while also erecting distinct boundaries around themselves, despite an increasingly global economy. He asserts that in the modern world it has become common to entrust major resources to institutions we know little about, and suggests that we need to learn from historical experience and temper this with more traditional forms of trust, or become an ever more distrustful society, with potentially very destabilising consequences.
