International Centre for Engineering Education, UNESCO

Engineering for Sustainable Development International Centre for Engineering Education, UNESCO, 2021-03-02 The report highlights the crucial role of engineering in achieving each of the 17 SDGs. It shows how equal opportunities for all is key to ensuring an inclusive and gender balanced profession that can better respond to the shortage of engineers for implementing the SDGs. It provides a snapshot of the engineering innovations that are shaping our world, especially emerging technologies such as big data and AI, which are crucial for addressing the pressing challenges facing humankind and the planet. It analyses the transformation of engineering education and capacity-building at the dawn of the Fourth Industrial Revolution that will enable engineers to tackle the challenges ahead. It highlights the global effort needed to address the specific regional disparities, while summarizing the trends of engineering across the different regions of the world.

The SAGE Encyclopedia of Quality and the Service Economy Su Mi Dahlgaard-Park, 2015-05-29 Society, globally, has entered into what might be called the service economy. Services now constitute the largest share of GDP in most countries and provide the major source of employment in both developed and developing countries. Services permeate all aspects of peoples' lives and are becoming inseparable from most aspects of economic activity. Quality management has been a dominating managerial practice since World War II. With quality management initially associated with manufacturing industries, one might assume the relevance of quality management might decrease with the emergence of the service economy. To the contrary, the emergence of the service economy strengthened the importance of quality issues, which no longer are associated only with manufacturing industries but are increasingly applied in all service sectors, as well. Today, we talk not only about product or service quality but have even expanded the framework of quality to quality of life and quality of environment. Thus, quality and services have emerged in parallel as closely interrelated fields. The Encyclopedia of Quality and the Service Economy explores such relevant questions as: What are the characteristics, nature, and definitions of quality and services? How do

we define quality of products, quality of services, or quality of life? How are services distinguished from goods? How do we measure various aspects of quality and services? How can products and service quality be managed most effectively and efficiently? What is the role of customers in creation of values? These questions and more are explored within the pages of this two-volume, A-to-Z reference work.

Handbook of Research on Education Institutions, Skills, and Jobs in the Digital Era Ordóñez de Pablos, Patricia, Zhang, Xi, Almunawar, Mohammad Nabil, 2022-09-30 The evolution of information technologies, mobile devices, social media, and the needs of students, workers, and academics has experienced rapid changes in the past several years. This complex and dynamic reality requires new forms of education delivery and teaching methodologies for academics. Old teaching practices must be refreshed to provide customized and context-adapted learning opportunities. Additionally, there are drivers, barriers, and success factors within distance and mobile learning devices and systems that need to be explored and tested. The Handbook of Research on Education Institutions, Skills, and Jobs in the Digital Era aims to foster an international dialogue of approaches, methodologies, and tools for the transformation of education in the digital era and broaden the visibility of new technologies for education, establish an international scientific platform for collaboration on digital education, and accelerate innovation in education technology. Covering critical topics such as faculty training,

online teaching, and talent management, this major reference work is ideal for government officials, industry professionals, policymakers, researchers, scholars, academicians, practitioners, instructors, and students.

Shift Ed David Houle, Jeff Cobb, 2011-04-04 A comprehensive guide to transforming American schools Futurist David Houle and educational strategist Jeff Cobb issue a “call to action” to everyone who is concerned about education in America. He argues that reinventing our system is inevitable and we already have the information and capabilities to make the necessary changes. Shift Ed challenges us to ask the right questions, expand our vision, and take action now. The book includes an overview of the educational system and expert opinions on key areas, including: Technology and connectivity Organizational behavior Curriculum Learning and the brain Infrastructure and the physical plant

Rethinking Engineering Education Edward F. Crawley, Johan Malmqvist, Sören Östlund, Doris R. Brodeur, Kristina Edström, 2014-04-02 This book describes an approach to engineering education that integrates a comprehensive set of personal, interpersonal, and professional engineering skills with engineering disciplinary knowledge in order to prepare innovative and entrepreneurial engineers. The education of engineers is set in the context of engineering practice, that is, Conceiving, Designing, Implementing, and Operating (CDIO) through the entire lifecycle of engineering processes, products, and systems. The book is both a description of the development and implementation of the

CDIO model and a guide to engineering programs worldwide that seek to improve the education of young engineers.

Emerging Technologies for Education Tien-Chi Huang, Rynson Lau, Yueh-Min Huang, Marc Spaniol, Chun-Hung Yuen, 2017-12-15 This book constitutes the thoroughly refereed post-workshop proceedings of the Second International Symposium, SETE 2017, held in conjunction with ICWL 2017, Cape Town, South Africa, in September 2017. The 52 full and 13 short papers were carefully reviewed and selected from 123 submissions. This symposium attempts to provide opportunities for the crossfertilization of knowledge and ideas from researchers in diverse fields that make up this interdisciplinary research area.

Entrepreneurship Education and Training Programs around the World Alexandria Valerio, Brent Parton, Alicia Robb, 2014-05-06 Entrepreneurship has attracted global interest for its potential to catalyze economic and social development. Research suggesting that certain entrepreneurial mindsets and skills can be learned has given rise to the field of entrepreneurship education and training (EET). Despite the growth of EET, global knowledge about these programs and their impact remains thin. In response, this study surveys the available literature and program evaluations to propose a Conceptual Framework for understanding the EET program landscape. The study finds that EET today consists of a heterogeneous mix of programs that can be broken into two groups: entrepreneurship education and entrepreneurship

training. These programs target a range of participants: secondary and post-secondary education students, as well as potential and practicing entrepreneurs. The outcomes measured by program evaluations are equally diverse but generally fall under the domains of entrepreneurial mindsets and capabilities, entrepreneurial status, and entrepreneurial performance. The dimensions of EET programs vary according to the particular target group. Programs targeting secondary education students focus on the development of foundational skills linked to entrepreneurship, while post-secondary education programs emphasize skills related to strategic business planning. Programs targeting potential entrepreneurs generally are embedded within broader support programs and tend to target vulnerable populations for whom employment alternatives may be limited. While programs serving practicing entrepreneurs focus on strengthening entrepreneurs' knowledge, skills and business practices, which while unlikely to transform an enterprise in the near term, may accrue benefits to entrepreneurs over time. The study also offers implications for policy and program implementation, emphasizing the importance of clarity about target groups and desired outcomes when making program choices, and sound understanding of extent to which publicly-supported programs offer a broader public good, and compare favorably to policy alternatives for supporting the targeted individuals as well as the overall economic and social objectives.

Major Challenges Facing Higher Education in the Arab World: Quality

Assurance and Relevance Adnan Badran,Elias Baydoun,John R. Hillman,2019-03-25 This book focuses on two crucial issues that need to be addressed as a matter of urgency by universities in the Arab region, namely (a) conducting independent assessments of the quality of their teaching, research, administration, governance, and planning; and (b) determining the relevance of their teaching, research, and societal impacts. Although well-established around the world in manufacturing industries and private-sector service industries, including the research and commercialisation arms of the major universities and research institutes, it is only in recent years that quality-assurance (QA) assessments have started to be applied to most aspects education. Several Arab universities are adopting various forms of QA but some variants are little more than bureaucratic “box-ticking” exercises with minimal commitment by staff to the ultimate aim of continuing self-improvement. This book will be of interest to senior management at faculty and departmental level and above in all Arab universities specifically, and more generally in Islamic institutions of higher education. Senior management in other universities, especially in the developing world will benefit from its analyses and recommendations.

Shift Age David Houle,2011-12 According to the author, the Shift Age is humanity's new era -- a time of transformation and change that offers both great risk and opportunity.

The 60-Year Curriculum Christopher J. Dede,John Richards,2020-03-31 The 60-

Year Curriculum explores models and strategies for lifelong learning in an era of profound economic disruption and reinvention. Over the next half-century, globalization, regional threats to sustainability, climate change, and technologies such as artificial intelligence and data mining will transform our education and workforce sectors. In turn, higher education must shift to offer every student life-wide opportunities for the continuous upskilling they will need to achieve decades of worthwhile employability. This cutting-edge book describes the evolution of new models—covering computer science, inclusive design, critical thinking, civics, and more—by which universities can increase learners’ trajectories across multiple careers from mid-adolescence to retirement. Stakeholders in workforce development, curriculum and instructional design, lifelong learning, and higher and continuing education will find a unique synthesis offering valuable insights and actionable next steps.

World Meetings ,2000-07

The Essential Engineer Henry Petroski,2011-03-08 From the acclaimed author of *The Pencil* and *To Engineer Is Human*, *The Essential Engineer* is an eye-opening exploration of the ways in which science and engineering must work together to address our world’s most pressing issues, from dealing with climate change and the prevention of natural disasters to the development of efficient automobiles and the search for renewable energy sources. While the scientist may identify problems, it falls to the engineer to solve them. It

is the inherent practicality of engineering, which takes into account structural, economic, environmental, and other factors that science often does not consider, that makes engineering vital to answering our most urgent concerns. Henry Petroski takes us inside the research, development, and debates surrounding the most critical challenges of our time, exploring the feasibility of biofuels, the progress of battery-operated cars, and the question of nuclear power. He gives us an in-depth investigation of the various options for renewable energy—among them solar, wind, tidal, and ethanol—explaining the benefits and risks of each. Will windmills soon populate our landscape the way they did in previous centuries? Will synthetic trees, said to be more efficient at absorbing harmful carbon dioxide than real trees, soon dot our prairies? Will we construct a “sunshade” in outer space to protect ourselves from dangerous rays? In many cases, the technology already exists. What’s needed is not so much invention as engineering. Just as the great achievements of centuries past—the steamship, the airplane, the moon landing—once seemed beyond reach, the solutions to the twenty-first century’s problems await only a similar coordination of science and engineering. Eloquently reasoned and written, *The Essential Engineer* identifies and illuminates these problems—and, above all, sets out a course for putting ideas into action.

Management of Change ,2007-01-01 Problem-Based Learning (PBL) and Project-Based Learning are teaching methods based on principles of student-centred

learning, which target an interdisciplinary engineering curriculum. The transition from strictly traditional approaches in engineering education represents significant opportunities for change.
