The Dutch Implementation of the Data Retention Directive Geralda Odinot,D. de Jong,R. J. Bokhorst,C. J. de Poot,2014 This report shows how the Dutch Data Retention Act works in practice, providing an overview of the way in which the Act is structured, and of the use of the retained telephone and internet traffic data in investigative practice. The report also provides insight into the use and value of these data in court rulings. The main assumption behind the Act is that certain telephone and internet traffic data can play an important role in the investigation and prosecution of serious crimes. However, the fact that these privacy sensitive data have to be stored for a certain period of time is a continual source of discussion. Due to the rise of mobile phone and smartphone use, and because of the many communication possibilities provided by the Internet, distance communication has changed drastically in recent years. Given the international nature of many forms of crime, European harmonization on retention periods and the retrieval of data is desirable. European harmonization does not, however, resolve all the possible challenges presented by the virtual world. The search for an alternative to the current data retention is a hefty challenge. The insights offered will be useful in discussions concerning these developments. [Subject: Communication Technology, Criminology, Dutch Law]

Human Behavior on the Internet Santosh Kalwar,2009-02-01 In this thesis, Human behavior on the Internet, the human anxiety is conceptualized. The following questions have guided the writing of the thesis: How humans behave with the Internet technology? What goes in their mind? What kinds of behaviors are shown while using the Internet? What is the role of the content on the Internet and especially what are the types of anxiety behavior on the Internet? By conceptualization this thesis aims to provide a model for studying whether humans show signs of less or exacerbated anxiety while using the Internet.

Diffusion and Adoption of Information Technology Karlheinz Kautz,Jan Pries-Heje,2013-06-05 It. is well known that t.he introduction of a new technology in one organization not always produces the intended benefits (Levine, 1994). In many cases, either the receivers do not reach the intended level of use or simply the technology is rejected because it does not match with the expectations (true or false) and the accepted psychological effort to use it. The case of formal methods is a paradigmatic example of continual failures. The published cases with problems or failures only constitute the visible part of a large iceberg of adoption cases. It. is difficult to get companies to openly express the problems they had; however, from the experience of the author, failure cases are very common and they include any type of company. Many reasons to explain the failures (and in some cases the successes) could be postulated; however, the experiences are not structured enough and it is difficult to extract from them useful guidelines for avoiding future problems. Generally speaking, there is a trend to find the root of the problems in the technol ogy itself and in its adequacy with the preexistent technological context. Technocratic technology transfer models describe the problems in terms of these aspects. Although it is true that those factors limit the probability of success, there is another source of explanations linked to the individuals and working teams and how they perceive the technology.

Individual Learner Differences in SLA Janusz Arabski,Adam Wojtaszek,2011-09-02 Beginning from the conflict between individual learner differences and the institutionalized, often inflexible character of formal language instruction, Individual Learner Differences in SLA addresses the fact that despite this apparent conflict, ultimate success in learning a language is widespread. Starting with theoretically-based chapters, the book follows the thread of learner differences through sections devoted to learner autonomy; differentiated application of learning strategies; diagnostic studies of experienced learners' management of the learning process; and reports on phonological attainment and development of language skills. Rather than providing an overview of all individual variables, the book reveals how some of them shape and affect the processes of language acquisition and use in particular settings.

Sociocultural Theory and the Teaching of Second Languages James P. Lantolf,Matthew E. Poehner,2008 The fourteen

Beta Test Eric Griffith,2011-12 PUBLISHERS WEEKLY: An unusually lighthearted apocalyptic tale. Sam Terra is having a bad week. He lost Molly, the woman he secretly loves, when she vanished before his eyes at the exact same time that ten percent of the inhabitants of Earth disappeared. Naturally upset, Sam follows clues about the global vanishing with questionable help from his friends including a misanthropic co-worker and a childhood pal. When Molly reappears in the body of a man during a night of monster-laden devastation, Sam finally learns the truth. Not just about her, but about the planet Earth and the entire cosmos surrounding it. What we consider mundane reality, others consider a game . . . and not a very good one. The whole thing is about to be shut down.

CALL Dimensions Mike Levy,Glenn Stockwell,2013-04-15 This volume gives language teachers, software designers, and researchers who wish to use technology in second or foreign language education the information they need to absorb what has been achieved so far and to make sense of it. It is designed to enable the kind of critical reading of a substantial literature that leads to a balanced and detailed knowledge of the field. Chapter by chapter, the book builds, through description, analysis, examples, and discussion, a detailed picture of modern CALL. In this book, the label "CALL" is interpreted broadly to include technology-enhanced language learning, Web-enhanced language learning, and information and communication technologies for language learning. The work is distinguished by its attention to a range of languages rather than just English. The authors first set the scene and introduce major areas of interest and growth in CALL, and then look in depth at seven important dimensions: design, evaluation, computer-mediated communication, theory, research, practice, and technology. Chapters on each of these topics include a description that reviews the recent literature, identifies themes, and presents representative projects that illustrate the dimension, followed by a discussion that provides in-depth analysis, and a conclusion offering suggestions for further work. Detailed references and links connect the description and discussion with original works and primary sources so the reader can follow up easily on areas of personal interest. Two concluding chapters discuss how the various dimensions might be brought together, the first from a practical point of view, the second with a view to the development of CALL as a whole.

What English Language Teachers Need to Know Volume I Denise E. Murray,MaryAnn Christison,2019-02-01 Designed for pre-service teachers and teachers new to the field of ELT, What English Teachers Need to Know Volumes I, II, and III are companion textbooks organized around the key question: What do teachers need to know and be able to do in order for their students to learn English? In the Second Edition of Volume I, Murray and Christison return to this essential question and call attention to emerging trends and challenges affecting the contemporary classroom. Addressing new skills and strategies that EFL teachers require to meet the needs of their shifting student populations who are impacted by changing demographics, digital environments, and globalization, this book, which is grounded in current research, offers a strong emphasis on practical applications for classroom teaching. This updated and expanded Second Edition features: a new chapter on technology in TESOL new and updated classroom examples throughout discussions of how teachers can prepare for contemporary challenges, such as population mobility and globalization The comprehensive texts work for teachers across different contexts—where English is the dominant language, an official language, or a foreign language; for different levels—elementary/primary, secondary, university, or adult education; and for different learning purposes—general English, workplace English, English for academic purposes, or English for specific purposes.

Speech Analysis Synthesis and Perception James L Flanagan,2013-11-11 The first edition of this book has enjoyed a gratifying existence. 1s sued in 1965, it found its intended place as a research reference and as a graduate-Ievel text. Research laboratories and universities reported broad use. Published reviews-some twenty-five in number-were universally kind. Subsequently the book was translated and published in Russian (Svyaz; Moscow, 1968) and Spanish (Gredos, S.A.; Madrid, 1972). Copies of the first edition have been exhausted for several years, but demand for the material continues. At the behest of the publisher, and with the encouragement of numerous colleagues, a second edition was begun in 1970. The aim was to retain the original format, but to expand the content, especially in the areas of digital communications and com puter techniques for speech signal processing. As before, the intended audience is the graduate-Ievel engineer and physicist, but the psycho physicist, phonetician, speech scientist and linguist should find material of interest.

What English Language Teachers Need to Know Volume III MaryAnn Christison,Denise E. Murray,2014-03-05 What English Teachers Need to Know, a set of companion texts designed for pre-service teachers and teachers new to the field of ELT, addresses the key question: What do English language teachers need to know and be able to do in order for their students to learn English? These texts work for teachers across different contexts (countries where English is the dominant language, one of the official languages, or taught as a foreign language); different levels (elementary/primary, secondary, college or university, or adult education); and different learning purposes (general English, workplace English, English for academic purposes, or English for specific purposes). Volume I, on understanding learning, provides the background information that teachers need to know and be able to use in their classroom. Volume II, on facilitating learning, covers the three main facets of teaching: planning,

instructing, and assessing. Volume III, on designing curriculum, covers the contexts for, processes in, and types of ELT curricula—linguistic based, content-based, learner-centered, and learning-centered. Throughout the three volumes, the focus is on outcomes, that is, student learning. Features • Situated in current research in the field of English language teaching and other disciplines that inform it • Sample data, including classroom vignettes • Three kinds of activities/tasks: Reflect, Explore, and Expand

Calling on CALL Nike Arnold,2006 CALICO Book Series, Volume 5 containing an overview of the field of computer-assisted language learning and teaching.

Business Operations in the Philippines Ricardo J. Romulo,Priscilla B. Valer,Jayson L. Fernandez,

CALL Environments Joy Egbert,Elizabeth Hanson-Smith,2007 When the first edition of CALL Environments was published in 1999 (Alexandria, VA: TESOL), it filled a distinct need for a computer assisted language learning (CALL) text focused specifically on second language acquisition (SLA). Much has happened in the world of technology since then, but the need to maintain this connectionbetween research on both CALL and SLA still exists. This second edition continues to meet that need by highlighting new tools, discussing new research, and proposing new practical applications. And many of the chapters, which discuss topics such as visual literacy, critical thinking, and creativity, address content from the revised National Education Technology Standards for Students. As Egbert and Hanson-Smith point out, although technology presents a whole new language, the language of technology is not the most crucial information that educators need in order to use computers and the Internet effectively in their language classrooms. More important is an understanding of good pedagogy and the relationships among teaching, learning, and technological environments. This volume builds on the structure of the first edition, based on the eight conditions for optimal learning environments, by adding suggestions for projects and questions for reflection at the end of each chapter, as well as an index of terms used throughout the book.
