In the XXI-st century, in searching of a “style”, after Postmodernism, it is considered that new architecture based on algorithms and parameters may offer new senses of space continuity and legibility. In opposite, the contextualist and phenomenologist movements consider this approach as a formal and fragile tendency, culturally un-sustained and which won’t prove its consistence in time as utopist and futurist did. Topics like new avant-garde movement, stylistic searching, anachronistically architecture, space continuities and correspondences, lived architecture or experimental manifesto projects, the evolving of geometries, urban continuities or classical defragmentation, functional zoning, social impact scenarios, space formalization, aesthetic and symbolic design values, authentically or new built archaeology, sustainable design etc. will be presented and debated under three main sections: Traditional versus Computational, Innovation and Experiment, Archive – Utopia – Events. Built / Unbuilt. Automotive Development Processes Julian Weber,2009-06-22 The global crisis the automotive industry has slipped into over the second half of 2008 has set a fierce spotlight not only on which cars are the right ones to bring to the market but also on how these cars are developed. Be it OEMs developing new models, suppliers integerating themselves deeper into the development processes of different OEMs, analysts estimating economical risks and

opportunities of automotive investments, or even governments creating and evaluating scenarios for financial aid for suffering automotive companies: At the end of the day, it is absolutely indispensable to comprehensively understand the processes of auto- tive development – the core subject of this book. Let’s face it: More than a century after Carl Benz, Wilhelm Maybach and Gottlieb Daimler developed and produced their first motor vehicles, the overall concept of passenger cars has not changed much. Even though components have been considerably optimized since then, motor cars in the 21st century are still driven by combustion engines that transmit their propulsive power to the road surface via gearboxes, transmission shafts and wheels, which together with spring-damper units allow driving stability and ride comfort. Vehicles are still navigated by means of a steering wheel that turns the front wheels, and the required control elements are still located on a dashboard in front of the driver who operates the car sitting in a seat.

Mountain Emergency Medicine Hermann Brugger, Ken Zafren, Luigi Festi, Peter Paal, Giacomo Strapazzon, 2021-03-15T00:00:00+01:00 Mountain emergency medicine has seen exponential development due to the ever increasing number of people who hike or trek as well as practice extreme sports. Emergency physicians and nurses need to be equipped with the necessary training to be able to manage “on the field” accidents and sicknesses as well as their own physical security. Theoretical knowledge is generally of high level but practical expertise is dangerously lacking in many operators. Furthermore, treatment modalities on the field have not been completely codified and are not supported by internationally-accepted guidelines. This book is the first to offer a complete and thorough approach to this field of Emergency Medicine based on the latest research findings.

Sharkonomics 2: How to attack and defend your business in today’s disruptive digital waters Stefan Engeseth, 2019-08-15 Sharks are nature’s most revered and feared killing machines. But if you study the behaviour of sharks, you will learn they are also highly strategic and efficient in the way they survive and thrive in nature’s competitive environment. Inspired by the shark’s evolved (over 420 million years) instincts and strategic moves, this book provides businesses with 10 ways on how to attack the market leaders, and take market share, in your sector. “Move or Die”, “Strike Unpredictably”, “Timing is the Key”, “Spread Panic” – these are some of the key ways to make shark food out of market leaders. Building on the success of the first edition of Sharkonomics (2012), this expanded and updated edition provides an inspiring perspective on competing in business and how companies of any size can create a

presence for themselves in their market. “Stefan not only uses the ‘shark’ metaphor but has actually swam in shark waters to absorb the drama of life and death. He describes the attack stratagems of a shark but respects the intended victims enough to show how they can defend themselves.

The ideas and practical solutions described in the book are the outcome of dedicated research by academics and practitioners aiming to advance theory and practice in this dynamic and all-encompassing discipline. A thorough understanding of the physical characteristics of a wide range of people is essential in the development of consumer products and systems. Human performance data serve as valuable information to designers and help ensure that the final products will fit the targeted population of end users. Mastering physical ergonomics and safety engineering concepts is fundamental to the creation of products and systems that people are able to use, avoidance of stresses, and minimization of the risk for accidents.
