Protecting Individual Privacy in the Struggle Against Terrorists National Research Council,Division on Engineering and Physical Sciences,Computer Science and Telecommunications Board,Division on Behavioral and Social Sciences and Education,Committee on National Statistics,Committee on Law and Justice,Committee on Technical and Privacy Dimensions of Information for Terrorism Prevention and Other National Goals,2008-10-26 All U.S. agencies with counterterrorism programs that collect or mine personal data-such as phone records or Web sites visited-should be required to evaluate the programs' effectiveness, lawfulness, and impacts on privacy. A framework is offered that agencies can use to evaluate such information-based programs, both classified and unclassified. The book urges Congress to re-examine existing privacy law to assess how privacy can be protected in current and future programs and recommends that any individuals harmed by violations of privacy be given a meaningful form of redress. Two specific technologies are examined: data mining and behavioral surveillance. Regarding data mining, the book concludes that although these methods have been useful in the private sector for spotting consumer fraud, they are less helpful for counterterrorism because so little is known about what patterns indicate terrorist activity. Regarding behavioral surveillance in a counterterrorist context, the book concludes that although research and development on certain aspects of this topic are warranted, there is no scientific consensus on whether these techniques are ready for operational use at all in counterterrorism.

Blood Brothers B. Lintner,2016-04-30 From pirates singing Ricky Martin to mob hits carried out with samurai swords, Bertil Lintner offers a fascinating look at organized crime in the Asia Pacific. Both Western and Asian pundits assert that shady deals are an Asian way of life. Some argue that corruption and illicit business ventures - gambling, prostitution, drug trafficking, gun running, oil smuggling - are entrenched parts of the Asian value system. Yet many Asian leaders maintain that their cities are safer than Sydney, Amsterdam, New York, and Los Angeles. Making use of expertise gained from twenty years of living in Asia, Lintner exposes the role crime plays in the countries of the Far East. In *Blood Brothers*, he takes you inside the criminal fraternities of Asia, examining these networks and their past histories in order to answer one question: How are civil societies all over the world to be protected from the worst excesses of increasingly globalised mobsters?

This landmark tome contains stories by Ursula K. Le Guin, Cory Doctorow, M. Rickert, Paolo Bacigalupi, Orson Scott Card, Neil Gaiman, Ray Bradbury, and many others.

Encephalitis Lethargica Paul Bernard Foley,2018-02-07 Encephalitis lethargica ('sleeping sickness') was a mysterious disorder that swept the world in the decade following the First World War, before disappearing without its cause having been identified. Around 85% of its victims, predominantly children, adolescents and younger adults, survived the acute disorder, but most developed severe neurological syndromes, particularly severe post-encephalitic parkinsonism and other severe motor abnormalities, that incapacitated them for the remainder of their lives. Despite its brief history, encephalitis lethargica played a major role in a variety medical discussions between the two World Wars, as this epitome of neuropsychiatric disease - attacking both motor and mental functions - appeared just as the separation of neurology and psychiatry had reached a critical point. Encephalitis lethargica sufferers presented an unprecedented combination of neurologic and psychiatric symptoms - including previously puzzling phenomena primarily associated with schizophrenia and hysteria, as well as behavioral changes and attention deficit disorders in children - that not only underscored the unity of mind and movement in the CNS, but also illuminated the critical role played by subcortical structures in consciousness and other higher mental functions that had formerly been associated with the soul and more recently presumed to be localized to the human cerebral cortex. Encephalitis lethargica exerted a greater influence on clinical and theoretic neuroscientific thought between the two World Wars than any other single disorder and had an enduring impact upon neurology and psychiatry. This book will be of interest to an educated audience active or interested in clinical (neurology, psychiatry, psychology) or laboratory neuroscience, particularly those interested in neuropsychiatry, as well as to those interested in the history of the biomedical sciences.

The Emerging Asian Bond Market Ismail Dalla,1995-01-01 Provides a comprehensive survey of the East Asian bond markets, identifies best practices for fostering their development, and presents a broad agenda for further reforms. East Asia's spectacular economic performance over the past several decades has been marked by macroeconomic stability, consistent growth, low inflation, the lowering of trade barriers, and an overall improvement in living standards. The region now has a well developed banking system and boasts four of the top 20 stock markets in the world. Its bond markets, however, are relatively small and at an early stage of development. This report provides a comprehensive survey of the East Asian bond markets, identifies best practices for fostering their development, and presents a broad agenda of reforms for their further development. The report, which is based on studies of bond markets in China, Hong Kong, Indonesia, the Republic of Korea, Malaysia, the Philippines, Singapore, and Thailand, finds great diversity among those markets. It was presented at the Emerging Asian Bond Market Conference, co-sponsored by the World Bank and the Hong Kong Monetary Authority and held in Hong Kong, June 26-27, 1995. It is believed that with the proper institutional prerequisites in place, the markets will grow very rapidly and become a leading source of financing for the region. How to Win at Quitting Smoking V. J. Sleight, 1915-01-03 Unlike other books on the subject, *How to Win at Quitting Smoking* focuses on the process of change instead of a single method. Proven evidence based strategies are given in a motivating manner, often in a smoker's own words. Easy to understand analogies are used to explain some of the complicated psychological processes of change. As a former smoker, the author writes from personal experience, as well as over 20 years of clinical practice helping thousands become smoke-free.

Germans in the Antarctic Cornelia Lüdecke, 2021-02-08 While science was usually at the forefront of German Antarctic expeditions, research into the Southern Polar region always had a political or economic component, whether it was about resource use or securing areas of influence. Cornelia Lüdecke presents the course of the three German Antarctic expeditions from 1901-03, 1911-12 and 1938/39 with their partly dramatic turns and twists and provides insights into everyday life under extreme conditions. She also evaluates unpublished material from the archives and private estates of the expedition members. She looks at the expeditions from a scientific and political point of view and also deals with the myths associated with the Schwabenland expedition during the National Socialist era. Finally, the author describes German south polar research after World War II, which took different paths in the German Democratic Republic and in the Federal Republic of Germany, and gives an outlook on future research. For the first time, this book presents the history of the Germans in Antarctica in a factual and informative way for the general public. With numerous pictures, some of which have never been published before.

Stopping Power Joseph Neil Schulman, J. Neil Schulman, 1994-12 Did you know that every 13 seconds one of America's 70 million gun owners uses a firearm in defense against a criminal? That American women use handguns 416 times a day in defense against rapists, which is a dozen times more often than rapists use a gun? That a gun kept in the home for protection is 216 times as likely to be used in defense against a criminal than it is to cause the death of an innocent victim in that household? These are just a few of the surprises this book has in store for anyone whose belief in gun control is based on TV news or popular magazines. Award-winning novelist, screenwriter, and journalist, J. Neil Schulman, challenges the misinformation that pundits ranging from network anchors to ill-informed doctors are promoting about guns. Especially for the reader who doesn't own a gun and has never even considered buying one, *Stopping Power* should be an eye-opener.

Skeletal Trauma Erin H. Kimmerle, Jose Pablo Baraybar, 2008-02-19 Born out of the need to recover, analyze, and present physical evidence on thousands of individual victims of large-scale human rights violations, multi-national, multi-disciplinary forensic teams developed a sophisticated system for the examination of human remains and set a precedent for future investigations. Codifying this process, *Skeletal Trauma: Identification of Injuries Resulting from Human Rights Abuse and Armed Conflict* describes an epidemiological framework for collecting, analyzing, and interpreting evidence for use at trial. It pieces together fragments of skeletal tissue and associated physical evidence to determine a mechanism of trauma that is factually based, methodologically scripted, and scientifically interpreted. Providing a contextual background, the opening chapter discusses international forensic investigations into Human Rights violations through international tribunals and other emerging judicial systems. The second chapter presents protocols for systemic data collection and methods for the differential diagnosis of wounds to classify and interpret mechanisms of injury. Organized topically, the remaining chapters evaluate blasting injuries, blunt force trauma, skeletal evidence of torture, sharp force trauma, and gunfire injuries. Each chapter discusses wounding mechanisms, wound pathophysiology, relevant legal examples, and case studies. Twenty-six leading scholars and practitioners from anthropology, pathology, and forensics contribute their research, cases, photographs, and extensive fieldwork experience to provide 16 representative case studies. Taken from human rights violations, ethnic and armed conflict, and extra-judicial executions throughout the Americas, Europe, and Asia, all evidence in the examples is interpreted through an epidemiological model and set in a legal framework. Several of the exemplary studies, including those from the Balkans, have already been presented as evidence in criminal trials.

Blaese, Beth E. Brant, Anita Endrezze, Louise Erdrich, Diane Glancy, Reid Gómez, Janet Campbell Hale, Joy Harjo, Linda Hogan, Misha Nogha, Beth H. Piatote, Patricia Riley, Leslie Marmon Silko, and Anna Lee Walters.
