Conserving Canvas Cynthia Schwarz,Ian McClure ,Jim Coddington,2023-10-24 The most authoritative publication in nearly fifty years on the subject of conserving paintings on canvas. In 2019, Yale University, with the support of the Getty Foundation, held an international conference, where nearly four hundred attendees from more than twenty countries gathered to discuss a vital topic: how best to conserve paintings on canvas. It was the first major symposium on the subject since 1974, when wax-resin and glue-paste lining reigned as the predominant conservation techniques. Over the past fifty years, such methods, which were often destructive to artworks, have become less widely used in favor of more minimalist approaches to intervention. More recent decades have witnessed the reevaluation of traditional practices as well as focused research supporting significant new methodologies, procedures, and synthetic materials for the care and conservation of paintings on fabric supports. Conserving Canvas compiles the proceedings of the conference, presenting a wide array of papers and posters that provide important global perspectives on the history, current state, and future needs of the field. Featuring an expansive glossary of terms that will be an invaluable resource for conservators, this publication promises to become a standard reference for the international conservation community. The free online edition of this open-access publication is available at getty.edu/publications/conserving-canvas. Also available are free PDF and EPUB downloads of the book.

Radiation in Art and Archeometry D.C. Creagh,D.A. Bradley,2000-06-14 /inca/publications/misc/creaghcov.htmAbout the cover This book contains twenty chapters covering a wide range of research in the fields of scientific conservation of art and archaeometry. The common thread is the use of radiation in these analyses. The term radiation is used in the widest possible sense. The book encompasses the use of electromagnetic radiation in its microwave, infrared, visible, ultraviolet, x ray and γ ray forms and the use of particulate forms such as electrons, neutrons and charged particles for which the Planck's Law relation applies. In many cases there is an interplay between the two forms: for example, proton induced x ray emission (PIXE), secondary ion mass spectrometry (SIMS). As far as possible the chapters have been arranged in order of ascending particle energy. Thus it commences with the use of microwaves and finishes with the use of γ rays. The authors were chosen on the basis of their expertise as practitioners of their particular field of study. This means that, for example, the mature fields of study such as the IR and UV study of paintings have been written by senior researchers, whereas for the emerging fields of synchrotron and neutron techniques the chapters have been written by talented researchers at the commencement of their careers.

Human Rights Museums Jennifer Carter,2022-09-16 Human Rights Museums presents case studies that trace how calls for historical and social justice, and the commensurate rise of a rights regime have led to the emergence of a new museological genre: the human rights museum. Presenting innovative field research conducted in new and emerging human rights museums across Asia and Latin America, the book adopts a broad museological approach. It does so by including national and community museums, as well as public and private museological initiatives, within its purview. Drawing on in-depth case studies about museums in Taiwan, Japan, Paraguay and Colombia – all discussed within their political and cultural contexts – the book examines the paradigmatic shift that has occurred within the museum field in the wake of the larger global transformations that have shaped contemporary geo-politics over the last 50 years. The diversity of geographical and political contexts, and the attention to lesser-known institutions within the canon of English museum studies literature, presents readers with a valuable opportunity to learn more about innovative museological models in non-English-speaking and non-Western contexts. Human Rights Museums will appeal to academics, scholars and students of museum studies and related disciplines, and to museum professionals seeking to know more about the diverse and evolving roles of museums in contemporary society.

Ecomuseums and Climate Change Nunzia Borrelli,Raul Dal Santo,Peter Davis,2023-06-15 Climate change is a reality, and communities around the world are now facing significant environmental problems – rising global temperatures leading to increased risk of flooding, fire, and sea level rise, resulting in the destruction of property and social infrastructure, loss of biodiversity and tangible and intangible cultural heritage, and damage to economies. Little wonder then that the online conference held on 30 September 2021 with the title “Ecomuseums and Climate Action” attracted more than one hundred participants from countries whose communities are facing these problems.This book presents the results of this conference where heritage experts, community activists, curators, politicians and academics from several countries, explored how ecomuseums and community museums are acting as catalysts for transition, renewal, and sustainable development and how they might effectively contribute to the UN’s Sustainable Development Goals and climate action. How can these organisations best contribute to the debate about the climate crisis and promote local action? Central to those actions are encouraging local people to recognise how important their cultural, natural and intangible cultural heritage is in making places special and giving a sense of belonging, why that heritage should be sustained, and how heritage assets can be used to promote climate action. This book – with its remarkable collection of essays from around the world – demonstrates how small local actions, considered together, can have a dramatic and far-reaching impact. It will be warmly welcomed by anyone interested in climate action, heritage and museum studies, and

environmental issues.

The Responsive Museum Caroline Lang,John Reeve,2016-02-24 What is the relationship today between museums, galleries and learning? The Responsive Museum interrogates the thinking, policies and practices that underpin the educational role of the museum. It unravels the complex relationship of museums with their publics, and discusses today's challenges and the debates that have resulted. The highly experienced team of writers, including museum educators and directors, share their different experiences and views, and review recent research and examples of best practice. They analyse the implications of audience development and broadening public access, particularly in relation to special groups, minority communities and disabled people, and for individual self-development and different learning styles; they explore issues of public accountability and funding; discuss the merits of different evaluation tools and methodologies for measuring audience impact and needs; and assess the role of architects, designers and artists in shaping the visitor experience. The latter part of this book reviews practical management and staffing issues, and training and skills needs for the future. This book is for students, museum staff, especially those involved in education and interpretation, and senior management and policy-makers. This is a much-needed review of the relationship between museums and galleries and their users. It also offers a wealth of information and expertise to guide future strategy and practice.
