PISA Students, Computers and Learning Making the Connection OECD,2015-09-15 Are there computers in the classroom? Does it matter? Students, Computers and Learning: Making the Connection examines how students' access to and use of information and communication technology (ICT) devices has evolved in recent years.

The Good ICT Society Gunilla Bradley,2017-06-14 What is Quality of Life in a society that has embraced information and communication technology (ICT)? What is Wisdom in this kind of society? And what things are helping or hindering us from having both wisdom and a

good quality of life in ICT societies? Taking the reader through a quick analysis of the current social and psychological changes in the Information and Communication Society, Bradley challenges us to avoid becoming victims of technology - whether we are professionals, policymakers, parents or citizens. Indeed, she introduces a theoretical model based on four decades' worth of research to help the reader to understand this complex, technological world. In addition to focusing the reader's attention on convergence and acceleration, this model describes the interplay between technology, societal structure, organizational design and human roles, thus leading to what Bradley describes as a good ICT society. Emphasising the necessity of a co-operative parallel between the automation and humanization of society, this innovative volume will be of interest to undergraduate and postgraduate students and postdoctoral researchers interested in the subjects such as Information and Communication Technology and Social Change, Psychology and Sociology, Computer Technology and Media Technology.

Information and Communication Technology for Development (ICT4D) Richard Heeks,2017-11-08 Mobile phones are close to ubiquitous in developing countries; Internet and broadband access are becoming commonplace. Information and communication technologies (ICTs) thus represent the fastest, broadest and deepest technical change experienced in international development. They now affect every development sector – supporting the work of hundreds of millions of farmers and micro-entrepreneurs; creating millions of ICT-based jobs; assisting healthcare workers and teachers; facilitating political change; impacting climate change; but also linked with digital inequalities and harms – with the pace of

change continuously accelerating. Information and Communication Technology for Development (ICT4D) provides the first dedicated textbook to examine and explain these emerging phenomena. It will help students, practitioners, researchers and other readers understand the place of ICTs within development; the ICT-enabled changes already underway; and the key issues and interventions that engage ICT4D practice and strategy. The book has a three-part structure. The first three chapters set out the foundations of ICT4D: the core relation between ICTs and development; the underlying components needed for ICT4D to work; and best practice in implementing ICT4D. Five chapters then analyse key development goals: economic growth, poverty eradication, social development, good governance and environmental sustainability. Each chapter assesses the goal-related impact associated with ICTs and key lessons from real-world cases. The final chapter looks ahead to emerging technologies and emerging models of ICT-enabled development. The book uses extensive in-text diagrams, tables and boxed examples with chapter-end discussion and assignment questions and further reading. Supported by online activities, video links, session outlines and slides, this textbook provides the basis for undergraduate, postgraduate and online learning modules on ICT4D.

Asia in the Global ICT Innovation Network Giuditta De Prato,Daniel Nepelski,Jean Simon,2013-07-31 Production and innovation activities are being re-distributed across the world. The BRICS countries (Brazil, Russia, India and China) are proving the major engine of global growth, being less impacted by the financial crisis than developed economies or able to recover more quickly. Asia in the Global ICT Innovation Network takes a close look at the information and communication technologies (ICTs)

landscape, not only in two BRICS countries, India and China, but also in South Korea and Taiwan. The book documents the size of the ICT sector for each of the selected countries, and assesses their R&D expenditure and its place in the international innovation network. The selected countries play a major role in shifting patterns of international trade and global value chains. The countries offer different historical profiles, with reforms dating back from the nineties for "Chindia and earlier policies for the "dragons , with later reforms focusing on IT. The book accounts for their specificity, and emphasises the fact that the four countries have achieved impressive results in terms of economic growth. The ICT sector was a major contributor to this growth and led a pioneering role for other sectors. This title consists of three parts: ICT in emerging economies, covering China and India; the return of the dragons, covering South Korea and Taiwan; and Network knowledge and trade, covering regional networks of R&D centres, India as an S&T cooperation partner, Asian countries in the global production network, and Asia in the process of internationalisation of ICT and R&D. Provides a well-supported look at the ICT sector in Asia, an area where extant literature consists mostly in a scattering of articles in various and heterogeneous journals Focuses on innovation Speaks to a growing interest in the role of emerging countries in ICT innovation

Handbook of Research on Information Communication Technology Policy: Trends, Issues and Advancements Adomi, Esharenana E.,2010-07-31 The Handbook of Research on Information Communication Technology Policy: Trends, Issues and Advancements provides a comprehensive and reliable source of information on current developments in information communication technologies. This source includes ICT

policies; a guide on ICT policy formulation, implementation, adoption, monitoring, evaluation and application; and background information for scholars and researchers interested in carrying out research on ICT policies.

Global Networking, Communication and Culture: Conflict or Convergence? Halit Ünver,2018-03-19 Pursuing an interdisciplinary approach, this book offers detailed insights into the empirical relationships between overall social key figures of states and cultures in the fields of information and communication technology (ICT) (digital divide/inequality), the economy, education and religion. Its goal is to bridge the 'cultural gap' between computer scientists, engineers, economists, social and political scientists by providing a mutual understanding of the essential challenges posed and opportunities offered by a global information and knowledge society. In a sense, the historically unprecedented technical advances in the field of ICT are shaping humanity at different levels and forming a hybrid (intelligent) human-technology system, a so-called global superorganism. The main innovation is the combined study of digitization and globalization in the context of growing social inequalities, collapse, and sustainable development, and how a convergence towards a kind of global culture could take place. Accordingly, the book discusses the spread of ICT, Internet Governance, the balance between the central concentration of power and the extent of decentralized power distribution, the inclusion or exclusion of people and states in global communication processes, and the capacity for global empathy or culture.

ICTs and the Millennium Development Goals Harleen Kaur,Xiaohui Tao,2014-05-06 This book attempts to create awareness about the UN-MDGs and how various

ICT can be harnessed to appeal to different demographics. Current empirical evidence suggests that MDG awareness is relatively low particularly in developed countries, and that the levels of MDG awareness vary considerable across socioeconomic variables or demographics from United Nations perspective. It also examines how ICT can be used to bring about technical and social innovations strengthen livelihoods, support economic development, water and climate resilience and improve the education and health sectors and enhance development opportunities. Several studies are highlighted that reinforce the view that government support and private sector expertise and funding are important factors in ICT-based e-government solutions in developing countries. The book also builds on the thesis that a strong connection between competencies in mathematics, science, and information communication/technology is required to build logical concepts and critical thinking skills. It also examines the opportunities and barriers of promoting students' learning skills, including communication, cooperation, collaboration and connection using the Wiki tool under the blackboard platform. Finally, the book also highlights the challenges involved in application of ICT in education. This is significant for educators in order to surmount these obstacles and consequently successfully incorporate ICT into the educational system. The chapters present the relevant literature on ICTs and the perceived barriers to ICT integration in basic education. They also focus on the implications of incorporating ICT in the basic educational system. The challenges confronting the integration of ICT in education are equally identified with a view to ensuring a more efficient application of ICT in attaining education for all.

   **Professionalism in the Information and
Communication Technology Industry** John
Weckert,Richard Lucas,2013-10-15 Professionalism is
arguably more important in some occupations than in
others. It is vital in some because of the life and death
decisions that must be made, for example in medicine. In
others the rapidly changing nature of the occupation
makes efficient regulation difficult and so the professional
behaviour of the practitioners is central to the good
functioning of that occupation. The core idea behind this
book is that Information and Communication Technology
(ICT) is changing so quickly that professional behaviour of
its practitioners is vital because regulation will always lag
behind.
   **The impact of information and communication
technology (ICT) on international trade in agri-food
products** Franziska Thiemann,2013-11-13 The rapid
diffusion of information and communication technologies
(ICT) is believed to be one of several important drivers of
international trade and globalisation. The purpose of this
dissertation was to analyse whether the three ICT - fixed
telephone lines, mobile phones, and the internet - has
encouraged international trade in important agri-food
products. Gravity models of bilateral trade between
countries were chosen to explain international trade. We
used panel data of the values of bilateral trade between
pairs of countries for the period 1995 to 2009. The
empirical results from OLS and negative binomial
regression estimation suggest that ICT has an effect on
international trade in agri-food products. The impact is,
however, not always strong and, contrary to expectations,
it is often negative. For the products, 'wine' and 'fruit and

vegetable juice', we found no effect of ICT on trade at all. Although there is great variation in the estimated impacts of individual ICT on international trade, the impact of mobile phones is somewhat stronger than that of fixed telephone lines and of the internet. Die rasante Verbreitung von Informations- und Kommunikationstechnologien (IKT) gilt als einer von vielen treibenden Kräften des internationalen Handels und der Globalisierung. Ziel dieser Dissertation war es herauszufinden, ob die drei IKT - Festnetztelefone, Mobiltelefone und Internet - den internationalen Handel von wichtigen Agrar- und Ernährungsgütern fördert. Gravitationsmodelle des bilateralen Handels wurden ausgewählt um den internationalen Handel zu erklären. Paneldaten wurden genutzt um den bilateralen Handel zweier Länder zwischen den Jahren 1995 und 2009 zu analysieren. Die empirischen Ergebnisse der OLS Schätzung und der negativ binominalen Regression zeigen, dass IKT einen Effekt auf das Handelsvolumen von Agri-food Produkten ausübt. Der Einfluss ist nicht immer stark und entgegengesetzt der Erwartungen, ist der geschätzte Einfluss häufig negativ. Lediglich bei ‚Wein' und bei ‚Obst- und Gemüsesäften' konnte kein Einfluss von einem speziellen IKT auf den Handel nachgewiesen werden. Obwohl es große Variationen bei den geschätzten Effekten von einzelnen IKT auf den internationalen Handel gibt, ist der Einfluss von Mobiltelefonen größer als der von Festnetztelefonen und dem Internet.

Public Access ICT Across Cultures Francisco J Proenza,2015-05-08 A systematic assessment of the impact of public access to computers and the Internet, with findings from developing countries in South America, Asia, and Africa. Shared public access to computers and the Internet in developing countries is often hailed as an

effective, low-cost way to share the benefits of digital technology. Yet research on the economic and social effects of public access to computers is lacking. This volume offers the first systematic assessment of the impact of shared public access in the developing world, with findings from ten countries in South America, Asia, and Africa. It provides evidence that the benefits of diversified participation in digital society go beyond providing access to technology. Public access venues—most often Internet cafés in cities and state-run telecenters in rural areas—are places for learning, sharing, working, empowerment and finding opportunities. The book documents the impact of public access on individuals, on society and networks, and on women. Chapters report findings and examine policy implications of research on such topics as users' perceptions of the benefits of Internet café use in Jordan; ICT job training in Rwanda; understanding user motivations and risk factors for overuse and Internet addiction in China; the effect of technology use on social inclusion among low-income urban youth in Argentina; productive uses of technologies by grassroots organizations in Peru; use of technology by migrant ethnic minority Burmese women in Thailand to maintain ties with their culture and their family and friends; and women's limited access to the most ubiquitous type of venue, cybercafés, in practically all countries studied—and quite severely in some places, e.g. Uttar Pradesh, India. Translation of ICT for Education Towards a Knowledge Society Machunwangliu Kamei,2016-06 The growing importance of knowledge, research, innovation and evolving perspectives on expertise with the usage of Information Communication Technologies (ICT) are changing the sociology of knowledge in the globalized world. Universities are the major institutions involved in the production and dissemination of knowledge. This book

looks at ICT for education initiatives taken up towards building a Knowledge Society as emphasized in national education policy regimes for encouraging knowledge generation, knowledge acquisition, knowledge diffusion and the exploitation of knowledge. The research examines the present practice of ICT adoption in an existing framework of University of Hyderabad (UOH) and Tezpur University (TZU) through intensive case study. The research attempts to analyze issues of knowledge, governance and access using ICT; the application of communication technologies in Higher Education Sector that helps in fulfilling the goal of a Knowledge Society; the communication process and strategies in the networking of higher education into a Knowledge Society; existing 'digital divide' and the implications. The Stakeholder's perspective further highlights the advantages and the challenges faced in the actual implementation of ICT4E. Based on the study, the research offers recommendations for management, human resources, processes and institutional culture in ICT4E implementation.

ICT for the Next Five Billion People Josef Lorenz,2010-06-04 Currently, around one to two billion users are able to connect to the Internet, most of them living in the industrialized parts of the world. However, if we want to improve the quality of life of the world population with the help of access to information and education, it is necessary that in the next decade an additional five billion people gain access to the Internet. The next five billion Internet users are mainly living in emerging economies. Therefore, the main challenge is to lower the economic barrier using new approaches for infrastructure deployment and service delivery to billions of people. This book reflects the discussions of the challenges from the Münchner Kreis with representatives from the ICT industry, academia, non-governmental organizations and governmental development organizations, among them many representatives from emerging economies in Africa and Asia. They had highlighted the real demand for ICT, and what impact ICT creates for the wealth and lifestyle of the people.

The Social Dynamics of Information and Communication Technology Leslie Haddon,2016-03-03 What shapes the role of Information and Communication Technologies in our everyday life? Despite the speed with which information and communication technologies such as the PC, mobile telephone and internet have found their way into society, there remains a good deal of debate surrounding their adoption and use. Through empirical

studies covering a broad range of everyday life and work settings, this volume provides grounded insights into the social dynamics influencing how ICTs are both shaped and experienced. Specifically, the book examines the contributions of diverse disciplines to our understanding of these processes, the symbolic nature of technologies, the influence of design on the experience of ICTs, the role of users in influencing that design, the social constraints affecting the use of those technologies, and strategies for evaluating the social consequences of ICT innovations.
