From Idea to Digital Product Ivan Trajkovic, 2019-06-22 Concepting -- a general notion or idea; a conception. An idea of something formed by mentally combining all its characteristics or particulars; a construct. Digital Product Idea -- a result of the thinking process which lays the foundation in one's field of knowledge and experience and results in mental visualization of a new product or an improvement to an existing one. The majority of products fail. They fail for two reasons: one is the very product, while the other is the business that operates it. What this book deals with is making sure the product is not the reason for business failure. This trend is present not only in startups but also in SMEs and enterprises. It is important to grasp this: there is a business and there is a product, in

which case the product is a business tool. Let's imagine a race track for a moment and think about a car and a driver in this analogy: the car is the product and the driver is the founder; the driver (founder) employs the best of his/her skills, knowledge and experience to operate the car (product) in order to get from point A to point B (from investment to profitability) in the most efficient manner (the most efficient utilization of resources) so as to cross the finishing line as a handful of the best (successfully goes through the technology adoption lifecycle and crosses the chasm; if you are not familiar with it -- in the simplest terms, make the business sustainable). If the product is what it needs to be and it performs, it is only up to the business to make it a success. Both the product and the business must be in sync at all times. Before light there was darkness and before business there was product, whereas before product there was idea. The transformation of that idea into a digital product and a synchronized coexistence of the product and the idea is the process that can destine the business to success or failure. One of the primary reasons for the aforementioned failure is the lack of proper product development (concepting, as I prefer to call it). In this case, the product may not fail early in the process, but it will in the early stages of its life-cycle because of the way it had been concepted. There is a strong bond between this and how the product was built, but that is a different topic that I will briefly address at the end of the book. Failure may occur as early as product design stage, it can be as harmful as failure during software development, and as costly as the scenario in which a defective product reaches the customers. The best moment for a product to fail and for you to be happy about it is during concepting when the least effort and the smallest amount of resources are invested in the product and when everything that comes after can be validated, especially the design, the build, and the road to the market. This book is about the concepting of digital products and even though the entire process can amount to ten rules, there is so much more to it --which is the very reason this book was written. I have concepted and built over two hundred products with my core team. This book is the result of more than a decade of hands-on experience and during that time I witnessed many successes, but even more failures. This book is focused on my 12-milestone methodology for digital product concepting and it offers the reader the means to sustain great inspirations to avoid hidden and inevitable risks of failure. I tried to choose the adequate verb that would portray exactly how great inspirations need to be managed, since, even though they are the primary driver of a new business, they also put that future business at risk. At times, you will need to sustain your great inspirations, whereas, at times, you will have to restrain them.

Pocket Wisdom Business Builder Bob 'Idea Man' Hooey, 2020-11-27 The greatest ideas have been lost to mankind because the minds that spawned them did not capture them or act to bring them into reality. My challenge for you is to train your mind to systematically look for opportunities to unleash your creative side and bring ideas and innovation into your careers and organizations. The 'Next' Million Dollar Idea might just be yours...However, not every idea will be a million dollar one. Nor will every idea be a major innovative change

for your organization. Not every idea will even work or pay off when put into practice. But you will never know until you choose to build some foundations for success under the idea and start applying it or at least testing its effectiveness. The secret is acting on them! Committing to creating or capturing an 'idea-a-week', will condition and discipline your mind to be on the outlook for opportunities to improve how and what you do, and to add to your product or service mix. This mini-business book is designed to do just that. Using a very simple format, I want to challenge you to create or capture an 'idea-a-week' that will help enhance your performance, career or organization. Even if you don't enact each one, the fact that you are training your brain will pay off big time as you move forward. Commit to analysing or evaluating each one, and then build some concrete foundations for success under them. You may not always be able to implement them immediately. You might need some additional training, staffing, financing, technology, additional components, or other pieces, before it can be put into action. But, by taking the time to capture them, evaluate each one, and then applying the profitable ones, you will be entering the ranks of the innovators who truly make a difference. An 'idea-a-week' could be the turning point in your long-term success and profitability. Make this week the beginning of the most productive year in your career and organization's history. Reminder: systematically consider one idea-a-week. Let it 'germinate' in your mind as you go through your week.
