Statistical Machine Translation Philipp Koehn, 2010 The dream of automatic language translation is now closer thanks to recent advances in the techniques that underpin statistical machine translation. This class-tested textbook from an active researcher in the field, provides a clear and careful introduction to the latest methods and explains how to build machine translation systems for any two languages. It introduces the subject's building blocks from linguistics and probability, then covers the major models for machine translation: word-based, phrase-based, and tree-based, as well as machine translation evaluation, language modeling, discriminative training and advanced methods to integrate linguistic annotation. The book also reports the latest research, presents the major outstanding challenges, and enables novices as well as experienced researchers to make novel contributions to this exciting area. Ideal for students at undergraduate and graduate level, or for anyone interested in the latest developments in machine translation.

Calling Out to Isis Solange Ashby, 2020 The expansion of the cult of the goddess Isis throughout the Mediterranean world demonstrates the widespread appeal of Egyptian religion in the Greco-Roman period. In this monograph, Ashby focuses on an oft-neglected population in studies of this phenomenon: Nubian worshipers. Through examination of prayer inscriptions and legal agreements engraved on temple walls, as well as Ptolemaic royal decrees and temple imagery, Ashby sheds new light on the involvement of Nubians in the Egyptian temples of Lower Nubia, and further draws comparisons between Nubian cultic practices and the Meroitic royal funerary cult--

Hebrews William L. Lane, 2004 By surpassing most traditional commentaries, Lane's work unveils Hebrews as a sermon rendered by a concerned preacher to his Roman church, which is under persecution and dangerously close to rejecting the faith. As an exposition of encouragement and exhortation, Hebrews addresses the central concerns of our contemporary church as well: the felt absence of God, a climate of uncertainty and insecurity, the tension between secular conformity and spiritual maturity and the threat of societal perversion and materialism to a Christian commitment. Christians are called upon to express a faith that is rooted in the future and to continue

this life of pilgrimage with a radical new view of reality, which is based on sure confidence in the intervention of God in daily life. Tracing the writer's development thought by thought, rather than verse by verse, careful attention is paid to the cultural and historical background. This work is useful as a study guide for groups and individuals, or for any reader who wishes a mature understanding of the book of Hebrews.

Galactic Pot-healer Philip K. Dick, 1994 What could an omnipresent and seemingly omnipotent entity want with a humble pot-healer? Or with the dozens of other odd creatures it has lured to Plowman's Planet? And if the Glimmung is a god, are its ends positive or malign? Combining quixotic adventure, spine-chilling horror, and deliriously paranoid theology, *Galactic Pot-Healer* is a uniquely Dickian voyage to alternate worlds of the imagination.

Supertagging Srinivas Bangalore, Aravind Krishna Joshi, 2010 Investigations into employing statistical approaches with linguistically motivated representations and its impact on Natural Language processing tasks. The last decade has seen computational implementations of large hand-crafted natural language grammars in formal frameworks such as Tree-Adjoining Grammar (TAG), Combinatory Categorical Grammar (CCG), Head-driven Phrase Structure Grammar (HPSG), and Lexical Functional Grammar (LFG). Grammars in these frameworks typically associate linguistically motivated rich descriptions (Supertags) with words. With the availability of parse-annotated corpora, grammars in the TAG and CCG frameworks have also been automatically extracted while maintaining the linguistic relevance of the extracted Supertags. In these frameworks, Supertags are designed so that complex linguistic constraints are localized to operate within the domain of those descriptions. While this localization increases local ambiguity, the process of disambiguation (Supertagging) provides a unique way of combining linguistic and statistical information. This volume investigates the theme of employing statistical approaches with linguistically motivated representations and its impact on Natural Language Processing tasks. In particular, the contributors describe research in which words are associated with Supertags that are the primitives of different grammar formalisms including Lexicalized Tree-Adjoining Grammar (LTAG).
