Cinesexuality Patricia MacCormack,2016-05-23 Cinesexuality explores the queerness of cinema spectatorship, arguing that cinema spectatorship represents a unique encounter of desire, pleasure and perversion beyond dialectics of subject/object and image/meaning; an extraordinary 'cinesexual' relationship, that encompasses each event of cinema spectatorship in excess of gender, hetero- or homosexuality, encouraging all spectators to challenge traditional notions of what elicits pleasure and constitutes desiring subjectivity. Through a variety of cinematic examples, including abstract film, extreme films and films which present perverse sexuality and corporeal reconfiguration, Cinesexuality encourages a radical shift to spectatorship as itself inherently queer beyond what is watched and who watches. Film as its own form of philosophy invokes spectatorship thought as an ethics of desire. Original, exciting and theoretically sophisticated - focusing on continental philosophy, particularly Guattari, Deleuze, Blanchot, Foucault, Lyotard, Irigaray and Serres - the book will be of interest to scholars and students of queer, gender and feminist studies, film and aesthetics theory, cultural studies, media and communication, post-structural theory and contemporary philosophical thought.

Random Matrices, Frobenius Eigenvalues, and Monodromy Nicholas M. Katz,Peter Sarnak,2023-11-13 The main topic of this book is the deep relation between the spacings between zeros of zeta and L -functions and spacings between eigenvalues of random elements of large compact classical groups. This relation, the Montgomery-Odlyzko law, is shown to hold for wide classes of zeta and L -functions over finite fields. The book draws on and gives accessible accounts of many disparate areas of mathematics, from algebraic geometry, moduli spaces, monodromy, equidistribution, and the Weil conjectures, to probability theory on the compact classical groups in the limit as their dimension goes to infinity and related techniques from orthogonal polynomials and Fredholm determinants.

Modelling with Differential and Difference Equations Glenn Fulford,Peter Forrester,Arthur Jones,1997-06-12 Any student wishing to solve problems via mathematical modelling will find that this book provides an excellent introduction to the subject.

The Effortless Life Leo Babauta,2014-03-24 Most of us rush around doing a lot of task and errands each day, putting out fires, and dealing with dramas. Most of these struggle are invented. We are simply beings. Food, shelter, clothing and relationships are all we need to be happy. Food grows simply and naturally. Shelter is a simply roof. Clothing is just cloth. Simple relationships consist of enjoying each other's company without expectations. Beyond these simple needs, we've added invented needs: careers, bosses, and co-workers; new gadgets, software and social media; cars and nice clothes and purses and laptop bags and televisions and more. Imagine that you have a few close friends and family members, and you spend ample time with them. You have no expectations of them, therefore, they don't disappoint you, and, in fact, whatever they do is perfect. You love them for who they are, and your relationships remain uncomplicated. You enjoy spending time in solitude—with your thoughts, with nature, with a book, and maybe even creating. This is a simple, effortless life. It's not effortless as in "no effort," but it feels effortless, and that's what matters. And it's entirely possible. The only thing that stands in the way of an effortless life is the mind.

Mathematics in Berlin Heinrich Begehr,Helmut Koch,Jürg Kramer,Norbert Schappacher,Ernst-Jochen Thiele,2012-12-06 This little book is conceived as a service to mathematicians attending the 1998 International Congress of Mathematicians in Berlin. It presents a comprehensive, condensed overview of mathematical activity in Berlin, from Leibniz almost to the present day (without, however, including biographies of living mathematicians). Since many towering figures in mathematical history worked in Berlin, most of the chapters of this book are concise biographies. These are held together by a few survey articles presenting the overall development of entire periods of scientific life at Berlin. Overlaps between various chapters and differences in style between the chapters were inevitable, but sometimes this provided opportunities to show different aspects of a single historical event - for instance, the Kronecker-Weierstrass controversy. The book aims at readability rather than scholarly completeness. There are no footnotes, only references to the individual bibliographies of each chapter. Still, we do hope that the texts brought together here, and written by the various authors for this volume, constitute a solid introduction to the history of Berlin mathematics.

Integration - A Functional Approach Klaus Bichteler,2010-11-23 This book covers Lebesgue integration and its generalizations from Daniell's point of view, modified by the use of seminorms. Integrating functions rather than measuring sets is posited as the main purpose of measure theory. From this point of view Lebesgue's integral can be had as a rather straightforward, even simplistic, extension of Riemann's integral; and its aims, definitions, and procedures can be motivated at an elementary level. The notion of measurability, for example, is suggested by Littlewood's observations rather than being conveyed authoritatively through definitions of (σ) -algebras and good-cut-conditions, the latter of which are hard to justify and thus appear mysterious, even nettlesome, to the beginner. The approach taken provides the additional benefit of cutting the labor in half. The use of seminorms, ubiquitous in modern analysis, speeds things up even further. The book is intended for the reader who has some experience with proofs, a beginning graduate student for example. It might even be useful to the advanced mathematician who is confronted with situations - such as stochastic integration - where the set-measuring approach to integration does not work.

A Splintered Vision W.H. Schmidt,Curtis C. McKnight,S. Raizen,2007-05-08 A Splintered Vision: An Investigation of U.S. Science and Mathematics Education is the US report on the curriculum analysis component of the Third International Mathematics and Science Study (TIMSS) which was sponsored by the International Association for the Evaluation of Educational Achievement (IEA). The report summarizes data from the TIMSS curriculum analysis and integrates it with teacher questionnaire data from the US, Japan, and Germany on science and mathematics topic coverage and instructional practices. The authors of A Splintered Vision discuss and provide evidence of the unfocused nature of US mathematics and science curricular intentions, textbooks, and teacher practices. They offer the premise that producers of US textbooks and curriculum guides have attempted to answer calls for curricular reform by adding new content to already existing materials instead of devoting time to restructuring the materials. The authors also suggest that US teachers, inundated with a myriad of competing visions, are attempting to cover all the topics they confront in their resource documents and to meet all the instructional demands placed on them by those with a stake in education. In keeping with the 'incremental assembly line' philosophy in American society, US teachers also tend to lean toward a piecemeal approach to education. The authors speculate on what such practices may mean for the mathematics and science achievement of US students. The work is sure to spur discussion among educational researchers, policy makers, and others concerned about the future of mathematics and science education in the US.

The Distance from Here Neil LaBute,2003-03-25 His films In the Company of Men and Your Friends and Neighbors both gained critical renown for their biting satire and caustic wit. Now, with The Distance from Here, he has written his most riveting play yet, an intense look at the dark side of American suburbia. With little to occupy their time other than finding a decent place to hang out—the zoo, the mall, the school parking lot—Darrell and Tim are two American teenagers who lack any direction or purpose in their lives. When Darrell's suspicion about the faithlessness of his girlfriend is confirmed and Tim comes to her defense, there is nothing to brake their momentum as all three speed toward disaster.

"Proverbs Speak Louder Than Words" Wolfgang Mieder,2008 This book presents a composite picture of the richness of proverbs as significant expressions of folk wisdom as is manifest from their appearance in art, culture, folklore, history, literature, and the mass media. The book draws attention to the fact that proverbs as metaphorical signs continue to play an important role in oral and written communication. Proverbs as so-called monumenta humana are omnipresent in all facets of life, and while they are neither sacrosanct nor saccharine, they usually offer much common sense or wisdom based on recurrent experiences and observations.--BOOK JACKET.

Secondary Calculus and Cohomological Physics Marc Henneaux,Aleksandr Mikhaïlovich Vinogradov,1998 This collection of invited lectures (at the Conference on Secondary Calculus and Cohomological Physics, Moscow) reflects the state-of-the-art in a new branch of mathematics and mathematical physics arising at the intersection of geometry of nonlinear differential equations, quantum field theory, and cohomological algebra. This is the first comprehensive and self-contained book on modern quantum field theory in the context of cohomological methods and the geometry of nonlinear PDEs. It features: an up-to-date and self-contained exposition of the newest results in cohomological aspects of quantum field theory and the geometry of PDEs; a new look at interrelations among cohomology theory, the geometry of PDEs, and field theory; and, application to Batalin-Vilkovisky formalism, BRST formalism, anomalies, and quantum dynamics.

Algebras and Modules II Idun Reiten,Sverre O. Smalø,Øyvind Solberg,Canadian Mathematical Society,1998 The 43 research papers demonstrate the application of recent developments in the representation theory of artin algebras and related topics. Among the algebras considered are tame, bi-serial, cellular, factorial hereditary, Hopf, Koszul, non- polynomial growth, pre-projective, Termpereley-Lieb, tilted, and quasi-tilted. Other topics include tilting and co-tilting modules and generalizations as *-modules, exceptional sequences of modules and vector bundles, homological conjectures, and vector space categories. The treatment assumes knowledge of non- commutative algebra, including rings, modules, and homological algebra at a graduate or professional level. No index. Member prices are \$79 for institutions and \$59 for individuals, which also apply to members of the Canadian Mathematical Society. Annotation copyrighted by Book News, Inc., Portland, OR

Bipartite Graphs and Their Applications Armen S. Asratian,Tristan M. J. Denley,Roland Häggkvist,1998-07-13 This is the first book which deals solely with bipartite graphs. Together with traditional material, the reader will also find many new and unusual results. Essentially all proofs are given in full; many of these have been streamlined specifically for this text. Numerous exercises of all standards have also been included. The theory is illustrated with many applications especially to problems in timetabling, Chemistry, Communication Networks and Computer Science. For the most part the material is accessible to any reader with a graduate understanding of mathematics. However, the book contains advanced sections requiring much more specialized knowledge, which will be of interest to specialists in combinatorics and graph theory.

Aspects of Meaning Construction Günter Radden,Klaus-Michael Köpcke,Thomas Berg,Peter Siemund,2007-04-11 Meaning does not reside in linguistic units but is constructed in the minds of the language users. Meaning construction is an on-line mental activity whereby speech participants create meanings on the basis of underspecified linguistic units. The construction of meaning is guided by cognitive principles. The contributions collected in the volume focus on two types of cognitive principles guiding meaning construction: meaning construction by means of metonymy and metaphor, and meaning construction by means of mental spaces and conceptual blending. The papers in the former group survey experiential evidence of figurative meaning construction and discuss high-level metaphor and metonymy, the role of metonymy in discourse, the chaining of metonymies, metonymy as an alternative to coercion, and metaphonymic meanings of proper names. The papers in the latter group address the issues of meaning construction prompted by personal pronouns, relative clauses, inferential constructions, “sort-of” expressions, questions, and the into-causative construction.
