Taming Information Technology Eser Kandogan, Paul Maglio, Eben Haber, 2012-09-06 Information technology is at the center of modern life. It supports most day-to-day activities: talking on the phone, getting money from an ATM, or working in the office. Whether for work, commerce, or fun, we interact with computers, networks, and databases — all sorts of information technology. How does it work? Certainly, technological advances helped create this world. But what keeps it running? The answer is people. These people — computer system administrators — are the unsung heroes of the modern age. This book, ten years in the making, is the result. It tells the story of system administration through the narratives of real system administrators. It documents dynamic systems of people and machines, of specialists working together to tame hugely complex information technology infrastructures, developing and adapting their own tools and practices over time to create productive work environments. The authors hope Taming Information Technology will lead the way to a future in which the important work of these IT workers is better appreciated, better understood, and better supported.

IBM HTTP Server on z/OS: Migrating from Domino-powered to Apache-powered Edward McCarthy, IBM Redbooks, 2017-07-13 Users of IBM® z/OS® for the past several years had a choice of two HTTP Servers that they can use. Now, one server became strategic while the other is no longer supported with z/OS V2.2. IHS powered by Apache supports IPv6 and 64-bit execution and includes security authentication and authorization capabilities that are similar to those capabilities that are provided in IHS powered by IBM Domino®. This IBM Redpaper™ publication is aimed at technicians who are responsible for planning and deploying system software. It provides information on about the various features that are available in IBM HTTP Server powered by Apache. It also

provides guidance about how to upgrade from the old product to the new product.

The Economics of Social Innovation Judith Terstriep,Dieter Rehfeld,2022-06-23 This book addresses ‘the economics of social innovation’, a widely neglected topic in regional development. The chapters in this edited volume cover distinct but complementary and related aspects concerning the existing gap between the hitherto unexploited potential of social innovation in relation to socio-economic challenges that regions across Europe and globally face. Research on social innovation has gained momentum over the last decade, spurred notably by the growing interest in social issues related to policy making, public management and entrepreneurship in response to the grand challenges societies in Europe and worldwide face. Accelerated by the normative turn in research and innovation policies towards ‘missions’, social innovation is nowadays a central element on policy agendas, from the urban and regional level to the national and subnational level of the European Commission and the OECD. However, for social innovations to unfold their full potential a better understanding of underlying mechanisms, processes and impacts is necessary. The first three chapters focus on framework conditions and characteristics of

social innovation. The following two chapters emphasise the determinants of social innovation and translocal empowerment. In the last part, attention is devoted to social innovation in specific fields such as health care and greening society, and social innovations' transformative potential. The chapters in this book were originally published as a special issue of the journal, *European Planning Studies*.

International Energy Outlook Government Publications Office, 2016-08-15 *International Outlook 2016*, an updated statistical reference with energy projections, is provided as a service to energy managers and analysts, both in government and in the private sector. The projections are used by international agencies, federal and state governments, trade associations, and other planners and decision makers. They are published pursuant to the Department of Energy Organization Act of 1977 (Public Law 95-91), Section 205(c). The report begins with a review of world trends in energy demand and the major macroeconomic assumptions used in deriving the *International Energy Outlook 2016* (IEO2016) projections, along with the major sources of uncertainty in the projections, which extend through 2040. In addition to the Reference case projections, High Economic Growth and Low Economic Growth cases were developed to consider the effects of higher and lower growth paths for economic activity than are assumed in the Reference case. IEO2016 also includes a High Oil Price case and, alternatively, a Low Oil Price case. The resulting projections--and the uncertainty associated with international energy projections in general--are discussed in Chapter 1, *World energy demand and economic outlook*. Projections for energy consumption and production by fuel--petroleum and other liquid fuels, natural gas, and coal--are presented in Chapters 2, 3, and 4, along with reviews of the current status of each fuel on a worldwide basis. Chapter 5 discusses the projections for world electricity markets--including nuclear power, hydropower, and other marketed renewable

energy resources--and presents projections of world installed generating capacity. Chapter 6 presents a discussion of energy used in the buildings sector (residential and commercial). Chapter 7 provides a discussion of industrial sector energy use. Chapter 8 includes a detailed look at the world's transportation energy use. Finally, Chapter 9 discusses the outlook for global energy-related carbon dioxide emissions. IEO 2016 focuses exclusively on marketed energy. Non-marketed energy sources, which continue to play an important role in some developing countries, are not included in the estimates. The Economics of the Oil and Gas Industry Joshua Yindenaba Abor,Amin Karimu,Runar Brännlund,2023-03-06 Energy is a key resource for transformational development globally. Oil and gas continue to play a key role in this sector irrespective of the gradual transition towards renewables and will continue to do so in most developing and emerging economies in the near future. The industry is complex and highly capital intensive not only with

significant risk, but also with significant benefits. Such a complex but important sector is generally not well understood both in academic and policy circles. This book fills this void by serving as a comprehensive reference to the oil and gas sector, with a focus on emerging markets and developing economies (EMDEs). It offers in-depth coverage of the critical and contemporary issues in the economics of the oil and gas industry by carefully integrating the relevant theoretical underpinnings and practical policy issues across the value chain of the industry in relation to the development, fiscal arrangements, and the economic and financing aspects of the industry. These insights will significantly deepen the understanding of the industry and extend knowledge of the sector in ways that existing books do not. The book includes relevant cases and, thus, will serve as a valuable resource for students taking courses in market analysis of the oil and gas industry, energy economics, development economics and finance, environmental and resource economics, the political economy of the extractive industry, and development studies. Researchers and practitioners working in these areas will also find the book to be a useful reference guide.

Africa's Fourth Industrial Revolution Landry Signé,2023-03-31 With the rise of new technologies and disruptive innovations reshaping the global economy, the Fourth Industrial Revolution has been characterized as a fusion between the physical, digital, and biological worlds. From the increasing adoption of mobile devices to the entrepreneurial use of 3D printing, artificial intelligence, and robotics, trends across Africa speak to the continent's potential for growth and sustainable development in the Fourth Industrial Revolution. In this innovative and timely study, Landry Signé examines the meaning, drivers, and implications of the Fourth Industrial Revolution for Africa. Drawing upon comparative, continent-wide analysis, Signé powerfully challenges our understandings of Africa's transformation and sheds light on the potential of the Fourth Industrial Revolution to change and shape the Global South. By defining and investigating the Fourth Industrial Revolution, Signé develops a valuable framework for further study and suggests strategies that Africans and their global partners can use to

capitalize upon this rapidly evolving technological landscape.

Measuring the Performance of the Hollow State David G. Frederickson, 2006-10-16 Measuring the Performance of the Hollow State is the first in-depth look at the influence of performance measurement on the effectiveness of the federal government. To do this, the authors examine the influence of the Government Performance and Results Act of 1993 (with consideration of the later Program Assessment Rating Tool of 2002) on federal performance measurement, agency performance, and program outcomes. They focus a systematic examination on five agencies in the U.S. Department of Health and Human Services—the Food and Drug Administration, the Centers for Medicare and Medicaid Services, the Health Resources and Services Administration, the National Institutes of Health, and the Indian Health Service. Besides representing a wide range of federal government organizational structures and program formats, these agencies offer a diverse array of third-party arrangements including states, native American tribes, scientists, medical schools, and commercial and nonprofit health care intermediaries and carriers. Exploring the development of performance measures in light of widely varying program mandates, the authors look at issues that affect the quality of this measurement and particularly the influence of program performance by third parties. They consider factors such as goal conflict and ambiguity, politics, and the critical role of intergovernmental relations in federal program performance and performance measurement. Through their findings, they offer illumination to two major questions in public management

today—what are the uses and limitations of performance measurement as a policy and management tool and how does performance measurement work when applied to the management of third-party government? While scholars and students in public administration and governmental reform will find this book of particular interest, it will also be of use to anyone working in the public sector who would like to have a better understanding of performance measurement.
