The Politics and Science of Prevision Andreas

Wenger, Ursula Jasper, Myriam Dunn

Cavelty, 2020-05-28 This book inquires into the use of prediction at the intersection of politics and academia, and reflects upon the implications of future-oriented policy-making across different fields. The volume focuses on the key intricacies and fallacies of prevision in a time of complexity, uncertainty, and unpredictability. The first part of the book discusses different academic perspectives and contributions to future-oriented policy-making. The second part discusses the role of future knowledge in decision-making across different empirical issues such as climate, health, finance, bio- and nuclear weapons, civil war, and crime. It analyses how prediction is integrated into public policy and governance, and how in return governance structures influence the making of knowledge about the future. Contributors integrate two analytical dimensions in their chapters: the epistemology of prevision and the political and ethical implications of prevision. In this way, the volume contributes to a better understanding of the complex interaction and feedback loops between the processes of creating knowledge about the future and the application of this future knowledge in public policy and governance. This book will be of much interest to students of security studies, political science, sociology, technology studies, and International Relations. The Open Access version of this book, available at

Winch and cable systems I. Samset, 2013-03-14 The book is a civil engineering handbook on winch and cable systems. The handbook may be used as textbook for university studies in civil engineering and forestry and as the basis for studies in schools on a technical level. It should be a useful reference book for construction engineers, civil engineers, logging engineers, foresters and leaders of operational activities under difficult terrain conditions. The content in the book is based on more than 35 years experience with practical winch and cable operations. As a leader of the Norwegian Institute of Forest Operations, the author has carried out research work in this field since 1947. The Institute is the owner of yarders, winches, cable cranes etc., and with its own cable crews the Institute operates as a contractor in its own research forests as well as in other state or privately owned forests throughout Norway. The research work also includes other cable crane operations in Norway and other countries. As the leader of the Joint FAO/ECE/ILO Study Group on Mechanized Forest Operations the author studied cable operations in most of the Eastern and Western European countries. As president of the International Union of Forestry Research Organizations the author visited most forest countries in the world. Information from research and practical cable crane operations were collected. The handbook is

based on material on winch and cable systems used in Japan, New Zealand, Soviet Union, Central Europe, Northern Europe, Eastern United States, Western United States and British Columbia.

Regulatory Theory Peter Drahos,2017-02-23 This volume introduces readers to regulatory theory. Aimed at practitioners, postgraduate students and those interested in regulation as a cross-cutting theme in the social sciences, Regulatory Theory includes chapters on the social-psychological foundations of regulation as well as theories of regulation such as responsive regulation, smart regulation and nodal governance. It explores the key themes of compliance, legal pluralism, meta-regulation, the rule of law, risk, accountability, globalisation and regulatory capitalism. The environment, crime, health, human rights, investment, migration and tax are among the fields of regulation considered in this ground-breaking book. Each chapter introduces the reader to key concepts and ideas and contains suggestions for further reading. The contributors, who either are or have been connected to the Regulatory Institutions Network (RegNet) at The Australian National University, include John Braithwaite, Valerie Braithwaite, Peter Grabosky, Neil Gunningham, Fiona Haines, Terry Halliday, David Levi-Faur, Christine Parker, Colin Scott and Clifford Shearing.

The Deviant Security Practices of Cyber Crime Erik H.A. van de Sandt, 2021-08-09 This is the first book to present a full, socio-technical-legal picture on the security practices of cyber criminals, based on confidential police sources related to some of the world's most serious and organized criminals.

Social Media and Democracy Brian D. Loader, Dan Mercea, 2012-06-12 This book critically investigates the complex interaction between

social media and contemporary democratic politics, and provides a grounded analysis of the emerging importance of Social media in civic engagement. Social media applications such as Facebook, Twitter, and YouTube, have increasingly been adopted by politicians, political activists and social movements as a means to engage, organize and communicate with citizens worldwide. Drawing on Obama's Presidential campaign, opposition and protests in the Arab states, and the mobilization of support for campaigns against tuition fee increases and the UK Uncut demonstrations, this book presents evidence-based research and analysis. Renowned international scholars examine the salience of the network as a metaphor for understanding our social world, but also the centrality of the Internet in civic and political networks. Whilst acknowledging the power of social media, the contributors question the claim it is a utopian tool of democracy, and suggests a cautious approach to facilitate more participative democracy is necessary. Providing the most up-to-date analysis of social media, citizenship and democracy, *Social Media and Democracy* will be of strong interest to students and scholars of Political Science, Social Policy, Sociology, Communication Studies, Computing and Information and Communications Technologies.

Surface Temperature Reconstructions for the Last 2,000 Years National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Surface Temperature Reconstructions for the Last 2,000 Years, 2007-01-05 In response to a request from Congress, Surface Temperature Reconstructions for the Last 2,000 Years assesses the state of scientific efforts to reconstruct surface temperature records for Earth during approximately the last 2,000 years and the implications of these efforts for our understanding of global climate change. Because widespread, reliable temperature records are available only for the last 150 years, scientists estimate temperatures in the more distant past by analyzing proxy evidence, which includes tree rings, corals, ocean and lake sediments, cave deposits, ice cores, boreholes, and glaciers. Starting in the late 1990s, scientists began using sophisticated methods to combine proxy evidence from many different

locations in an effort to estimate surface temperature changes during the last few hundred to few thousand years. This book is an important resource in helping to understand the intricacies of global climate change.

Plant Conservation Gary A. Krupnick, W. John Kress, 2005 Natural history has always been the foundation of conservation biology. For centuries, botanists collected specimens in the field to understand plant diversity; now that many habitats are threatened, botanists have turned their focus to conservation, and, increasingly, they look to the collections of museums, herbaria, and botanical gardens for insight on developing informed management programs. *Plant Conservation* explores the value of these collections in light of contemporary biodiversity studies. *Plant Conservation* opens with a broad view of plant biodiversity and then considers evolutionary and taxonomic threats and consequences of habitat alteration; specific threats to plant diversity, such as invasive species and global climate change; consequences of plant population decline at the ecological, evolutionary, and taxonomic levels; and, finally, management strategies that protect plant biodiversity from further decline. With a unique perspective on biodiversity and scientific collections, *Plant Conservation* ultimately emphasizes the role museums and botanical gardens will play in future conservation.

Restorative Policing Lodewijk Gunther Moor, 2009 The focus of restorative policing is within a community-oriented policing approach, where the

police have important tasks in rendering services to the population. Traditional forms of penal treatment no longer satisfy entirely, especially in relation to nuisances, incivilities, and petty crime. Is the community police officer the simple 'registrator' of events between victim and offender? Can s/he take the role of mediator, or can s/he refer to external instances in the domain of mediation or to civil judges? Do the police have their own restorative regulations and institutionalized practices, and are they involved in mediation in penal matters? In what ways do police officers contribute to informal restorative practices and conflict resolution in neighborhoods? This book is about restorative policing practices, and the place and role police forces can take in this kind of approach.

Manual of Cultivated Conifers P. den Ouden, B.K. Boom, 2012-12-06 As an introduction to the present book I would like to explain how it was, that I, a commercial nurseryman, became so keenly interested in Conifers and their nomenclature. In August 1924 the Dutch Dendrological Society was founded and at the same time a Committee for Nomenclature of woody plants was set up and I served on this committee as one of the members. Our first activity was to bring the catalogues of the various leading nurserymen in the Netherlands into line with the International Rules of Botanical Nomenclature and also to check their nursery stock. Formerly these catalogues had shown a rather confused nomenclature, nurserymen having usually made use of a variety of inconsistent books as guides in compiling their catalogues. In

the course of the work a close co-operation between scientific and practical workers developed. Although I had also fully contributed to the correct naming of hardy shrubs and perennials, I was most interested in Conifers. I had tried out several species, had grown a wide choice of garden forms and selected types of particular merit for propagation. My special love for Conifers led to the publication of my Name-list of Conifers (1937), which was adopted as a standard for varietal names at the International Horticultural Congress in Berlin (1938). Later I prepared my book 'Coniferen, Ephedra en Ginkgo' in the Dutch language (1949); compiling the Conifers cultivated or known to be grown in the Netherlands and Belgium at that time.

Spheres of Transnational Ecoviolence Peter Stoett, Delon Alain Omrow, 2020-12-01 This book explores violence against the environment within the broad scope of transnational environmental crime (TEC): its extent, perpetrators, and responses. TEC has become one of the greatest threats to environmental and human security today, as well as a lucrative enterprise and a mode of life in many regions of the world. Transnational Spheres of Ecoviolence argues that we cannot seriously consider stopping TEC without also promoting environmental (and climate) justice. The spheres covered range from wildlife and plant crime to illegal fisheries to toxic waste and climate crime. These acts of violence against the environment are both localized in terms of event and impact, and globalized in terms of market drivers and internationalized responses. Because

it is so often intimately linked to political violence, coerced labor, economic and physical displacement, and development opportunity costs, ecoviolence must be viewed primarily as a human security issue; the fight against it must derive legitimacy from impacts on local communities, and be twinned with the protection of environmental activists. Reliance on the generosity of distant corporations or the effectiveness of legal structures will not be adequate; and militarized responses may do more harm to human security than good to nature. A transformative approach to transnational ecoviolence is a very complex task affected by the geopolitics of neoliberalism, authoritarian states, rebel factions and extremists, socio-economic patterns, and many other factors. In this challenging text, the authors capture this complexity in digestible form and offer a wide-ranging discussion of commensurate policy recommendations for governments and the general public.

Tree-ring Dating and Archaeology M.G.L. Baillie, 2014-10-24 The analysis of tree-ring patterns, or dendrochronology, is a very exact science and an important dating technique. The basis of the method is misleadingly simple: that overlap of successive older ring patterns can generate a master chronology and samples of unknown age can then be checked against this. This book, published originally in 1982, traces the development of a specific project from its inception to the successful completion of some of the longest chronologies in Europe. In doing so it looks at some of the problems associated with the

subject and at the levels of precision possible. After outlining the techniques associated with the measurement and processing of tree-ring patterns, the author traces an attempt to construct such an independent chronology in a new area. The book breaks naturally into sections conditioned by the availability of timbers and these can be listed as modern, late medieval, medieval, early medieval and prehistoric. As far as possible the results are presented in the order in which things happened, thus preserving the sense of a developing subject.
