Sleight Jennifer Sommersby,2018-04-03 The greatest treasure, a most dangerous magic. Growing up in the Cinzio Traveling Players Company, Genevieve Flannery is accustomed to a life most teenagers could never imagine: daily workouts of extravagant acrobatics; wild animals for pets; and her mother, Delia, whose mind has always been tortured by visions—but whose love Geni never questions. In a world of performers who mystify and amaze on a daily basis, Delia's ghostly hallucinations never seemed all that strange . . . until the evening Geni and her mother are performing an aerial routine they've done hundreds of times, and Delia falls to her death. That night, a dark curtain in Geni's life opens. Everything has changed. As they reel from the tragedy, the Cinzio Players are also grappling with the circus's new owner: a generous, mysterious man whose connection to the circus—Geni suspects—has a dark history. And with the discovery of an otherworldly inheritance and her perilous mission to protect it, Geni is suddenly stumbling into a new reality of her own, her life interrupted daily by the terrors only Delia used to see. As the visions around her grow stronger, and her magical legacy becomes even more menacing, Geni is not sure who she should trust or love. Worst of all, she's starting to question whether she can trust her own mind.

Relativity and Scientific Computing Friedrich W Hehl,Roland A. Puntigam,Hanns Ruder,2012-12-06 For this set of lectures we assumed that the reader has a reasonable back ground in physics and some knowledge of general relativity, the modern theory of gravity in macrophysics, and cosmology. Computer methods are present ed by leading experts in the three main domains: in numerics, in computer algebra, and in visualization. The idea was that each of these subdisciplines is introduced by an extended set of main lectures and that each is conceived as being of comparable 'importance. Therefpre we believe that the book represents a good introduction into scientific I computing for any student who wants to specialize in relativity, gravitation, and/or astrophysics. We took great care to select lecturers who teach in a comprehensible way and who are, at the same time, at the research front of their respective field. In numerics we had the privilege of having a lecturer from the National Center for Supercomputing Applications (NCSA, Champaign, IL, USA) and some from other leading institutions of the world; visualization was taught by a visualization expert from Boeing; and in com puter algebra we took recourse to practitioners of different computer algebra systems as applied to classical general relativity up to quantum gravity and differential geometry.

Values in Education and Education in Values Mark Halstead,Monica J. Taylor,2005-10-26 An investigation into how schools can influence the developing values of young people is given in this book. The authors first look, from the perspective of educationalists and policy makers, at values within contemporary education; in particular, moral, spiritual, democratic and environmental values together with arts and health education. Secondly, they focus on the values of pupils and schools, examining school aims and mission statements, the formal curriculum, school ethos and assessment of children's development.; Insights are provided with guidance on how values may be most effectively incorporated into the activities of the schools. This book is intended to be of use as a practical and informative guide to all those involved in primary and secondary education and those interested in values education generally.

A Queer Romance Paul Burston,Paul Burston Nfa,Colin Richardson,2005-07-26 It's here and it's queer - popular culture inhabits all our lives, whether it comes in the form of movies or magazines, TV or shopping. A Queer Romance brings together critics, writers and artists to debate the possibilites of popular culture for lesbians and gay men. In a collection that is in-er-face but never out-to-lunch, the contributors variously revisit debates about the gaze to provide a new theory of Queer viewing; discuss texts coded as queer - from lesbian vampires to Hollywood's use of gay codes in mainstream films such as Top Gun and Black Widow; consider the sexual and cultural narratives at play in the world of home shopping catalogues; explore the pleasures and perils of gay cultural production, from the radically queer film-making of Monika Treut to the wild world of homocore fanzines, and address the possibilities of texts claiming to be for the gay spectator - from pornography `by women, for women and about women' to `Out' TV. The contributors to A Queer Romance don't all agree but, taken together, the collection argues strongly that everyone can have their queer moments.

Introduction to Bacteria and Their Ecobiology R.N. Doetsch,T.M. Cook,2012-12-06 The purpose of this book is to illustrate a selection of biological prop erties of bacteria that reveal them as important living beings. We have primarily addressed readers who have had some previous educa tion in the natural sciences, and we have assumed a modest under standing of elementary chemical and biological principles. Our aim is to

provide abrief survey of bacterial forms and structures, placing special emphasis on the activities of bacteria in their environment and some important interrelations within it. Bacterial ecobiology is the study of those aspects of bacteria that influence, and are in fluenced by, environmental phenomena. Some material traditionally covered in standard texts-such as medi cal bacteriology and immunology, applied bacteriology, and bacterial classification-will not be found here, because it is our opinion that these are peripheral to the idea of ecobiology and because numerous excellent treatments of this material are readily available. There is also no formal presentation ofbacterial genetics or of molecular biology per se in this book. However, mention of phenomena involved in these subjects is made where considered appropriate.

Numerical Computations: Theory and Algorithms Yaroslav D. Sergeyev,Dmitri E. Kvasov,2020-02-13 The two-volume set LNCS 11973 and 11974 constitute revised selected papers from the Third International Conference on Numerical Computations: Theory and Algorithms, NUMTA 2019, held in Crotone, Italy, in June 2019. This volume, LNCS 11974, consists of 19 full and 32 short papers chosen among regular papers presented at the the Conference including also the paper of the winner (Lorenzo Fiaschi, Pisa, Italy) of The Springer Young Researcher Prize for the best NUMTA 2019 presentation made by a young scientist. The papers in part II explore the advanced research developments in such interconnected fields as local and global optimization, machine learning, approximation, and differential equations. A special focus is given to advanced ideas related to methods and applications using emerging computational paradigms.
