**Acta Medicinæ Legalis. Volume XLIV. 1994** Patrice Mangin, Bertrand Ludes, 1995-04-21 Professor Patrice MANGIN President of the XVIth Congress of the International Academy of Legal Medicine and Social Medicine The International Academy of Legal Medicine and Social Medicine was founded in 1938 in Bonn. The motive for founding the Academy was to promote associating and confronting on an international background the scientific research work produced in the various domains dealing with the Legal and Social Medicine. As first president of the International Academy of Legal Medicine and Social Medicine, Professor Knud Sand from Copenhagen, assisted by colleagues of the Praesidium appointed as national representatives, succeeded in gathering together nearly the whole academic people involved in Legal and Social Medicine. Thus one year later, in 1939, The Academy became a worldwide institution of 450 members from thirty nations. After the war, what had been before of considerable interest for the progress of the knowledge and techniques in Legal Medicine remained again a pressing necessity leading to the second meeting of the Academy in 1947 in Brussels under the presidency of Professor De Laet. Since then the meetings of the Academy followed one another every three years. At this point, I would like to thank all the past presidents of the Academy and in particular Professor Roche and Professor Andre for their contribution without which the Academy would not be what it is presently.

**Genetics and Ethics in Global Perspective** Dorothy C. Wertz, John C. Fletcher, 2004-11-04 Dorothy Wertz and John Fletcher pioneered the first international study of ethical and social issues in genetics in 18 nations. This book reports and discusses their second and more representative study in 36 nations. The survey focused on actual situations that occur in the practice of medical genetics, presented as case vignettes that can also be used in teaching and policy discussion. Among the issues discussed are privacy, prenatal diagnosis, patient autonomy, directiveness in counseling, sex selection, forensic DNA banking, genetic discrimination, and eugenics. This is Dorothy Wertz's final book, as she died in April, 2003. It is a one of a kind cross-cultural study of complex ethical issues in the uses of genetic information. No one else has attempted to look at the international aspects of medical genetics on such a broad scale. The results provide a resource for discussion both within and among nations. Much bioethical and policy discussion now occurs in an information vacuum. The survey showed that what people would do, and their reasons for doing it, differed considerably from what ethicists think they should do. Many will be surprised at the results, especially in nations where bioethical discussion is just beginning. Genetics and Ethics in Global Perspective is of interest to medical geneticists, genetic counselors, social scientists and anthropologists who study cross-cultural issues, bioethicists and bioethics centers and health policy makers.

For each step of endodontic surgical procedures, surgical goals and possible outcomes are reviewed. Preoperative, intraoperative and postoperative risk factors for complications are identified and treatment options presented. Helpful decision-making algorithms, tables and flow charts complement the reader-friendly text.

The Schreber Case Sigmund Freud, 2013-11-28 The Schreber Case is distinctive from the other case histories in that it's based on the memoirs of a conjectural patient. Schreber was a judge and doctor of law who lived according to a strict set of principles. His nervous illness first manifested itself as hypochondria and insomnia - which he put down to his excessive workload - but gradually deteriorated into pathological delusion. Believing himself to be dead and rotting, Schreber attempted suicide, and then went on to experience bizarre delusional episodes whereby he believed he was being turned into a woman. The course of this extraordinary illness is analysed by Freud in his search for a root cause - could it have been caused by homosexual impulses that Schreber tried to repress?

*The Morphosyntax of Gender* Ruth Kramer, Ruth T. Kramer, 2015 This book presents a new cross-linguistic analysis of gender and its effects on morphosyntax. It addresses questions including the syntactic location of gender features; the role of natural gender; and the relationship between syntactic gender features and the morphological realization of gender. Ruth Kramer argues that gender features are syntactically located on the n head ('little n'), which serves to nominalize category-neutral roots. Those gender features are either

interpretable, as in the case of natural gender, or uninterpretable, like the gender of an inanimate noun in Spanish. Adopting Distributed Morphology, the book lays out how the gender features on *n* map onto the gender features relevant for morphological exponence. The analysis is supported by an in-depth case study of Amharic, which poses challenges for previous gender analyses and provides clear support for gender on *n*. The proposals generate a typology of two- and three-gender systems, with the various types illustrated using data from a genetically diverse set of languages. Finally, further evidence for gender being on *n* is provided from case studies of Somali and Romanian, as well as from the relationship between gender and other linguistic phenomena including derived nouns and declension class. Overall, the book provides one of the first large-scale, cross-linguistically-oriented, theoretical approaches to the morphosyntax of gender.

**Managing Children with Developmental Language Disorder** James Law, 2019 Although most children learn language relatively quickly, as many as 10 per cent of them are slow to start speaking and are said to have developmental language disorder (DLD). Children with DLD are managed by a variety of different professionals in different countries, are offered different services for different periods of time and are given a variety of different therapeutic treatments. To date, there has been no attempt to evaluate these different practices. *Managing Children with Developmental Language Disorder: Theory and Practice Across Europe and Beyond* does just this, reporting on the findings of a survey carried out as part of the work of COST Action IS1406, a European research network. Law and colleagues analyse the results of a pan-European survey, looking at how different services are delivered in different countries, at the cultural factors underpinning such services and the theoretical frameworks used to inform practice in different countries. The book also provides a snapshot of international practices in a set of 35 country-specific vignettes, providing a benchmark for future developments but also calling attention to the work of key practitioners and thinkers in each of the countries investigated. This book will be essential reading for practitioners working with children with language impairments, those commissioning services and policy in the field and students of speech and language therapy.

*Common Complications in Endodontics* Priyanka Jain, 2017-11-26 This book describes the most commonly encountered endodontic complications and provides up-to-date information on their prevention and management. The opening chapters explain the importance of accurate diagnosis and treatment planning, outline the role of digital radiography and CBCT in managing complications, and highlight the need for close attention to anatomic landmarks in order to avoid damage to neurovascular anatomy. Endodontic problems associated with different procedural errors are then discussed in detail, covering a wide variety of access- and instrumentation-related complications and the difficulties that may arise when using obturation techniques. Readers will also find information on the endodontic-periodontal relationship, special issues in geriatric patients, and the potential medical emergencies and precautions in specific patient subsets. The clear, easy-to-read text is complemented by numerous high-quality photographs and tables that assist understanding and ready identification of management solutions. This book will be of value for all dental practitioners with an interest in endodontics, endodontic specialists, and higher-level students.

*Light Robotics - Structure-mediated Nanobiophotonics* Jesper Glückstad, Darwin Palima, 2017-05-19 *Light Robotics - Structure-Mediated Nanobiophotonics* covers the latest means of sculpting of both light and matter for achieving bioprobing and manipulation at the smallest scales. The synergy between photonics, nanotechnology and biotechnology spans the rapidly growing field of nanobiophotonics. Nanoscale resolutions enable optical scientists to assess ever more accurate information. However, scientific hypothesis testing demands tools, not only for observing nanoscopic phenomena, but also for reaching into and manipulating nanoscale constituents. Taking an application based focus, this book explores how nanophotonics can productively be used in both the biomedical and life sciences, allowing readers to clearly see how structure-mediated nanobiophotonics can be used to increase our engineering toolbox for biology at the smallest scales. This book will be of great use to researchers and scientists working in the fields of optics and photonics. It will also be of great value to those working in the field of biotechnology, showcasing how nanotechnology can help provide new, effective ways to solve biomedical problems. Presents cutting-edge research on the principles, mechanisms, optical techniques, fabrication, modeling, devices and applications of nanobiophotonics Brings together the diverse field of structure-mediated nanobiophotonics into one coherent volume Showcases how nanophotonics can be used to create new, more effective micro- and nano-biodevices

*Atomic Force Microscopy Based Nanorobotics* Hui Xie, Cagdas Onal, Stéphane Régnier, Metin Sitti, 2011-09-25 The atomic force microscope (AFM) has been successfully used to perform nanorobotic manipulation operations on nanoscale entities such as particles, nanotubes, nanowires, nanocrystals, and DNA since 1990s. There have been many progress on modeling, imaging, teleoperated or automated control, human-machine interfacing, instrumentation, and applications of AFM based nanorobotic manipulation systems in literature. This book aims to include all of such state-of-the-art progress in an organized, structured, and detailed manner as a reference book and also potentially a textbook in nanorobotics and any other nanoscale dynamics, systems and controls related research and education. Clearly written and well-organized, this text introduces designs and prototypes of the nanorobotic systems in detail with innovative principles of three-dimensional manipulation force microscopy and parallel imaging/manipulation force microscopy.

**Evidence-Based Decision Making in Dentistry** Eyal Rosen, Carlos E. Nemcovsky, Igor Tsesis, 2017-01-05 This clinically oriented book covers all aspects of the evidence-based decision making process in multidisciplinary management of the natural dentition. The book opens by clarifying the principles of evidence-based decision making and explaining how these principles should be applied in daily practice. Individual chapters then focus specifically, and in detail, on endodontic, periodontal, and prosthetic considerations, identifying aspects that need to be integrated into decision making and treatment planning. Evidence-based decision making with regard to preservation of the natural tooth versus extraction and implant placement is then discussed, and a concluding chapter examines likely future trends in dentistry and how they may affect clinical decision making. The authors include leading endodontists, periodontists, and prosthodontists. Given the multidisciplinary and comprehensive nature of the book, it will be relevant and interesting to the entire dental community.
