This book reviews the concepts underlying the emerging field of neurocritical care informatics, with a focus on

integrated data acquisition, linear and nonlinear processing, and innovative visualization in the ICU. Subjects addressed in individual chapters are thus wide ranging and encompassing, for example, multimodal and continuous EEG monitoring and data integration, display of data in the ICU, patient-centered clinical decision support, optimization of collaboration and workflow, and progress towards an “integrated medical environment”. All of the nine chapters have been written by international thought leaders in the field.

*Drug Safety* Nigel S. B. Rawson, 2016-11-08 With Big Pharma garnering an increasing number of negative headlines due to reports of adverse drug reactions and a surge in prescription drug addiction and overdose deaths, many people are increasingly skeptical about the safety of modern pharmaceuticals and the moral integrity of the pharmaceutical industry. This book was written to provide a balanced perspective on drug safety risks. No therapeutic prescription drug is entirely risk-free. Before receiving marketing approval, new drugs go through arduous and expensive testing processes that can take up to a decade and cost over two billion dollars. While not perfect, the process is far from a Wild West environment where big pharmaceutical companies ride roughshod over government regulators. However, author and pharmacoepidemiologist Nigel Rawson argues, the antipathy that is common between governments, pharmaceutical industry and academic experts in Canada needs to change to an environment of collaboration and partnership to enhance our ability to respond in a timely fashion to future pharmaceutical crises. While directed mainly at students in the health sciences and pharmaceutical professionals, this book will be of interest to anyone, including lay people and policy makers, who would like to know more about the evolution of the prescription drug evaluation and risk assessment process. Although the book focuses primarily on Canada, it makes comparisons with the United States and Europe, and several of the author's recommendations for how to improve the prescription drug evaluation process are applicable worldwide.

**Real-World Evidence Generation and Evaluation of Therapeutics** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2017-07-05 The volume and complexity of information about individual patients is greatly increasing with use of electronic records and personal devices. Potential effects on medical product development in the context of this wealth of real-world data could be numerous and varied, ranging from the ability to determine both large-scale and patient-specific effects of treatments to the ability to assess how therapeutics affect patients' lives through measurement of lifestyle changes.
