Coders at Work Peter Seibel, 2009-12-21 Peter Seibel interviews 15 of the most interesting computer programmers alive today in Coders at Work, offering a companion volume to Apress's highly acclaimed best-seller Founders at Work by Jessica Livingston. As the words “at work” suggest, Peter Seibel focuses on how his interviewees tackle the day-to-day work of programming, while revealing much more, like how they became great programmers, how they recognize programming talent in others, and what kinds of problems they find most interesting. Hundreds of people have suggested names of programmers to interview on the Coders at Work web site: www.codersatwork.com. The complete list was 284 names. Having digested everyone's feedback, we selected 15 folks who've been kind enough to agree to be interviewed: Frances Allen: Pioneer in optimizing compilers, first woman to win the Turing Award (2006) and first female IBM fellow Joe Armstrong: Inventor of Erlang Joshua Bloch: Author of the Java collections framework, now at Google Bernie Cosell: One of the main software guys behind the original ARPANET IMPs and a master debugger Douglas Crockford: JSON founder, JavaScript architect at Yahoo! How to Build a Dragon or Die Trying: A Satirical Look at Cutting-Edge Science Knoepfler Paul, Knoepfler Julie, 2019-06-25 What if you could have your own real dragon? While that might seem like just a fantasy, today cutting-edge science has brought us to the point where it might really be possible. This book looks into the possibilities of making living, fire-breathing dragons. The world has been fascinated with dragons for thousands of years. Fictional dragons still have a firm place in pop culture, such as Smaug from *The Hobbit* as well as the dragons in *Game of Thrones* and in the *How to Train Your Dragon* movies. This new book discusses using powerful technologies such as CRISPR gene editing, stem cells, and bioengineering to make real dragons. It also goes through what useful information we can learn from animals such as Pteranodons and amazing present-day creatures in our quest to build actual dragons. The book goes on to discuss the possibility of building other mythical creatures such as unicorns and mermaids. Overall, *How to Build A Dragon* is also meant as a satirical look at cutting-edge science, and it pokes fun at science hype. Anyone who is interested in dragons or cutting-edge science will enjoy this book! It is written in a humorous, approachable way making science fun and easy to understand, including for young adults. The author is well-known scientist Paul Knoepfler who is familiar to the public for his science, his blog *The Niche*, and his frequent contributions to lay stories on new science concepts such as stem cells and CRISPR. He also is known for his TED talk on designer babies with more than 1.3 million views, and his two books — . The co-author, his daughter Julie Knoepfler, is a high school student interested in science and writing. She has her own blog on literary and film analysis, and enjoys taking a humorous look at culture through writing.

Smarter Homes Alexandra Deschamps-Sonsino, 2018-07-15 Over the past 100 years, the home has been a battleground for ideas of future living. Fueled by the electrification of cities, the move from the country to cities, post-war recovery and the development of the internet, the way we live at home (alone or with others) has changed beyond recognition. Science fiction writing, the entertainment industry, art, and modern interior design and architecture movements have also contributed to defining our aspirations around a future and now more present and possible 'smart' home. From the decade-old smart fridge that tells you if you have run out of milk to smart speakers that let you shop hands-free, some visions of the 'smart' home are yet to excite us while others are becoming a reality and will shape how we will live at home very soon. This book breaks down the historical, societal and political context for the changes in focus of that 'smartness' from affordability, efficiency, convenience to recently experimentation. These key points in time include: The development and marketing of electrical appliances in early 20th century War-time design the impact of military ergonomics Modernist interior design and building practices of the 1920s The space race and new materials of the post-war era Compact urban living in the 1960s & 70s Connected home entertainment in the 1980s-90s Phones and mobility in the 90s Smart energy & utilities in the early 2000s The internet-connected fridge in 2000 Remote care in a global world economy The sharing economy and new ways to shop at home Invisible 'smart' design in the home The second half of the book breaks down what current developments tell us about what our homes will look like in the next 10 years through the lens of spaces, services, appliances and behaviours in our homes. What You'll Learn Understand the historical context for current 'smart home' products Understand the social context of home product development Understand what in home

technologies are being developed Understand what products are currently available Understand what behaviours are being constantly leveraged Understand how this may affect longer term market trends for consumer products Many new and innovative products are being developed in the consumer and industrial spaces with a copy-paste mindset based on following larger businesses such as Amazon, Google and Apple. Many opportunities in the homespace however will come from understanding the history and multiple players that have contributed to the development of the home in general. For everyone working in product design and development, in R&D or in trends research as well as for everyone interested in the IoT for the home, this book will be a valuable resource and an enjoyable read. This book will give product business owners ideas about what has been done before and avenues for future development.

They have succeeded in

facilitating critical, high-profile launches. Unlike traditional agencies that are only able to measure ROI with soft marketing metrics, Ivy meets and exceeds marketing and business objectives. In addition, they have the requisite strategic, tactical and creative prowess to operate effectively in the social media arena, which is a combination hard to find in just one agency. I strongly recommend listening to what they have to say. -Denise Lu Senior Campaign Manager, Adobe Systems

Supercade Van Burnham,2003-10-24 A gloriously illustrated history of the videogame and its legacy for both our mindscapes and video technology. It was a time when technology was king, status was determined by your high score, and videogames were blitzing the world... From Pong to Pac-Man, Asteroids to Zaxxon—more than fifty million people around the world have come of age within the electronic flux of videogames, their subconscious forever etched with images projected from arcade and home videogame systems. From the first interactive blips of electronic light at Brookhaven National Labs and the creation of Spacewar! at the Massachusetts Institute of Technology; to the invention of the TV Game Project and the myriad systems of Magnavox, Atari, Coleco, and Mattel that followed; through the rise of the Golden Age of videogames and forward into the imagination of millions, Supercade is the first book to illustrate and document the history, legacy, and visual language of the videogame phenomenon. Exuberantly written and illustrated in full color, Supercade pays tribute to the technology, games, and visionaries of one of the most influential periods in the history of computer science—one that profoundly shaped the modern technological landscape and helped change the way people view entertainment. Supercade includes contributions from such commentators and participants as Ralph Baer, Julian Dibbell, Keith Feinstein, Joe Fielder, Lauren Fielder, Justin Hall, Leonard Herman, Steven Johnson, Steven Kent, Nick Montfort, Bob Parks, Carl Steadman, and Tom Vanderbilt.
