

In The Orbit

Barry M. Zide

Orbit John J. Nance,2007 The bestselling author of Pandora's Clock returns with a riveting thriller set in the world of commercial spaceflight. The year is 2009, and when a micrometeorite punches through the wall of a just-launched spacecraft, killing the pilot, passenger Kip Dawson discovers he is truly alone.

Lectures on the Orbit Method Aleksandr Aleksandrovich Kirillov,2004 Describes the essence of the orbit method for non-experts and gives a detailed exposition of the method. This work can be used as a text for a graduate course, as well as a handbook for non-experts and a reference book for research mathematicians and mathematical physicists.

License to Orbit Joseph N. Pelton,Peter P. Marshall,2009 This is an up-to-date investigation of the emerging commercial space business. It explores who are the players, the celebrities and technical innovators that are making this important new industry a reality. It is the most comprehensive look at the industry in terms of covering the companies, the role of NASA and other space agencies, as well as the strategic implications of private space systems. It examines the business risks and other possible show-stoppers that might inhibit the growth of commercial spaceflight systems. Space tourism is seen as more than a fad but a crucial next step in the evolution of humankind. The book is unique in terms of exploring new technologies of the future, and reviewing the regulatory and legal ramifications of private space now and into the next decade.

Reflections from Earth Orbit Winston E. Scott,2005 In spite of the recent loss of the space shuttle Columbia, there are those who believe in the seemingly routine nature of space flight. The author's experiences however confirm the tremendous curiosity and overall fascination the world maintains for flying in space. As a public speaker, he talks regularly to thousands of people of all ages and from every walk of life. These audience members universally are inquisitive about life in space and the makeup of the individuals who form the corps of con-temporary space explorers. Reflections From Earth Orbit is not your typical 'how do you go to the bathroom in space' book. It is a book about life as told through the memories, or reflections, of the author navy Captain Winston Scott. These reflections were prompted by events that occurred during two space shuttle missions as a NASA astronaut aboard the space shuttles Endeavour and Columbia. It has been written that Captain Scott's journey to the stars is a testament to perseverance and vision. Reflections is his attempt to share some of the experiences that drove him to overcome his life's obstacles and become one of a select few who journeyed beyond the bonds of earth into outer space. Through Reflections the author takes the reader into space. He gives vivid descriptions of life in space emphasising the everyday aspects of living with which the average, everyday person is curious and to which he or she can relate. As his memory is jogged by an event in space, Captain Scott relates a fascinating story with lessons learned from his past. He has succeeded in capturing the essence of life in space and sharing the space flight experience with the reader. Although not every chapter follows this exact format, e.g. Where Have You Gone Sky King, Reflections will entertain, educate, and inspire a general audience. In other words, one does not have to be a space enthusiast to enjoy 'Reflections'.

Cultures in Orbit Lisa Parks,2005 In 1957 Sputnik, the world's first man-made satellite, dazzled people as it zipped around the planet. By the beginning of the twenty-first century, more than eight thousand satellites orbited the Earth, and satellite practices such as live transmission, direct broadcasting, remote sensing, and astronomical observation had altered how we imagined ourselves in relation to others and our planet within the cosmos. In Cultures in Orbit, Lisa Parks analyzes these satellite practices and shows how they have affected meanings of the global and the televisual. Parks suggests that the convergence of broadcast, satellite, and computer technologies necessitates an expanded definition of television, one that encompasses practices of military monitoring and scientific observation as well as commercial entertainment and public broadcasting. Roaming across the disciplines of media studies, geography, and science and technology studies, Parks examines uses of satellites by broadcasters, military officials, archaeologists, and astronomers. She looks at Our World, a live intercontinental television program that reached five hundred million viewers in 1967, and Imparja tv, an Aboriginal satellite tv network in Australia. Turning to satellites' remote-sensing capabilities, she explores the U.S. military's production of satellite images of the war in Bosnia as well as archaeologists' use of satellites in the excavation of Cleopatra's palace in Alexandria, Egypt. Parks's reflections on how Western fantasies of control are implicated in the Hubble telescope's views of outer space point to a broader concern: that while satellite uses promise a global village, they also cut and divide the planet in ways that extend the hegemony of the post-industrial West. In focusing on such contradictions, Parks highlights how satellites cross paths with cultural politics and social struggles.

Orbital Mechanics for Engineering Students Howard D Curtis,2009-10-26 Orbital Mechanics for Engineering Students, Second Edition, provides an introduction to the basic concepts of space mechanics. These include vector kinematics in three dimensions; Newton’s laws of motion and gravitation; relative motion; the vector-based solution of the classical two-body problem; derivation of Kepler’s equations; orbits in three dimensions; preliminary orbit determination; and orbital maneuvers. The book also covers relative motion and the two-impulse rendezvous problem; interplanetary mission design using patched conics; rigid-body dynamics used to characterize the attitude of a space vehicle; satellite attitude dynamics; and the characteristics and design of multi-stage launch vehicles. Each chapter begins with an outline of key concepts and concludes with problems that are based on the material covered. This text is written for undergraduates who are studying orbital mechanics for the first time and have completed courses in physics, dynamics, and mathematics, including differential equations and applied linear algebra. Graduate students, researchers, and experienced practitioners will also find useful review materials in the book. NEW: Reorganized and improved discussions of coordinate systems, new discussion on perturbations and quaternions NEW: Increased coverage of attitude dynamics, including new Matlab algorithms and examples in chapter 10 New examples and homework problems

Pandora's Clock John J. Nance,2016-01-19 A plane carrying a supervirus searches for a place to land in this “combination of The Hot Zone and Speed” by a New York Times–bestselling author (USA Today). On a snowy road in a German forest, Ernest Helms sees a man trying to break into his car. After a scuffle, Helms escapes with only a cut on his hand. Hours later, he collapses aboard a flight from Frankfurt to New York. The pilot, Capt. James Holland, radios London to plan an emergency landing to save Helms—and then the nightmare begins. Heathrow denies Holland permission to land: Helms has been stricken with an ultracontagious pathogen that threatens the entire planet. When Germany also refuses to let him land, Holland and his passengers are prisoners of the sky, caught between a deadly disease and a world that would rather shoot them down than risk contamination. Written by a former aviator known as the master of mile-high suspense, this is a pulse-pounding thriller about infectious disease in the tradition of Outbreak and The Andromeda Strain. Threatened by hostile governments on the ground and disease in the sky, Captain Holland is in for the flight of his life.

Orbit Jay Apt,Michael Helfert,Justin Wilkinson,2003-10 Collects many of the most visually significant photographs taken during the first forty-one years of orbital space travel, in a volume that reflects the achievements of the space program, the natural wonders of the planet, and the consequences of pollution. Reprint.

In the Orbit of Sirens T. A. Bruno,2020-10-04 Nightmarish machines have driven humanity into the depths of space. The survivors are forced to adapt to a planet filled with monsters.

Winter's Orbit Everina Maxwell,2021-02-02 A Sunday Times Bestseller! A 2022 Alex Award Winner! “Sparks fly” (NPR) in Everina Maxwell’s gut-wrenching and romantic space opera debut. Prince Kiem, a famously disappointing minor royal and the Emperor's least favorite grandchild, has been called upon to be useful for once. He's commanded to fulfill an obligation of marriage to

the representative of the Empire's newest and most rebellious vassal planet. His future husband, Count Jainan, is a widower and murder suspect. Neither wants to be wed, but with a conspiracy unfolding around them and the fate of the empire at stake they will have to navigate the thorns and barbs of court intrigue, the machinations of war, and the long shadows of Jainan's past, and they'll have to do it together. So begins a legendary love story amid the stars. Like Ancillary Justice meets Red, White and Royal Blue, Winter's Orbit is perfect for fans of Lois McMaster Bujold. "High-pitched noises escaped me; I shouted, more than once, 'Now kiss!' ... in a world so relentlessly uncertain, there's a powerfully simple pleasure in the experience of a promise kept." —The New York Times Book Review At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Single Stage to Orbit Andrew J. Butrica, 2003-10-22 While the glories and tragedies of the space shuttle make headlines and move the nation, the story of the shuttle forms an inseparable part of a lesser-known but no less important drama—the search for a reusable single-stage-to-orbit rocket. Here an award-winning student of space science, Andrew J. Butrica, examines the long and tangled history of this ambitious concept, from its first glimmerings in the 1920s, when technicians dismissed it as unfeasible, to its highly expensive heyday in the midst of the Cold War, when conservative-backed government programs struggled to produce an operational flight vehicle. Butrica finds a blending of far-sighted engineering and heavy-handed politics. To the first and oldest idea—that of the reusable rocket-powered single-stage-to-orbit vehicle—planners who belonged to what President Eisenhower referred to as the military-industrial complex added experimental (X), aircraft-like capabilities and, eventually, a faster, cheaper, smaller managerial approach. Single Stage to Orbit traces the interplay of technology, corporate interest, and politics, a combination that well served the conservative space agenda and ultimately triumphed—not in the realization of inexpensive, reliable space transport—but in a vision of space militarization and commercialization that would appear settled United States policy in the early twenty-first century. -- D. M. Ashford

See You In Orbit? Our Dream Of Spaceflight Alan Ladwig, 2019-10-09 For centuries, a journey to space has been a shared dream of millions around the world. We have patiently, and impatiently, anticipated Sunday afternoon drives down celestial freeways. Yet, since 1961 when human space travel began, fewer than 560 professional astronauts, cosmonauts, taikonauts and a-half dozen millionaires have seen Earth from a vantage point in space. Given so few orbiting travelers, what made so many ordinary people think they had the slightest chance to fulfill their dream? Because for decades, visionaries, government officials, space companies, and the media told us our ticket to ride was just a rocket away. All we had to do was keep the dream alive. With so much optimism, shouldn't we all be there by now? See You In Orbit? Our Dream of Spaceflight will be the first non-fiction book to take a historical, personal, irreverent, and often-humorous look at the promises, expectations, principal personalities, and milestones regarding the goal and dream we have to fly in space.

Leaving Orbit Margaret Lazarus Dean, 2015-05-19 Winner of the Graywolf Press Nonfiction Prize, a breathtaking elegy to the waning days of human spaceflight as we have known it In the 1960s, humans took their first steps away from Earth, and for a time our possibilities in space seemed endless. But in a time of austerity and in the wake of high-profile disasters like Challenger, that dream has ended. In early 2011, Margaret Lazarus Dean traveled to Cape Canaveral for NASA's last three space shuttle launches in order to bear witness to the end of an era. With Dean as our guide to Florida's Space Coast and to the history of NASA, Leaving Orbit takes the measure of what American spaceflight has achieved while reckoning with its earlier witnesses, such as Norman Mailer, Tom Wolfe, and Oriana Fallaci. Along the way, Dean meets NASA workers, astronauts, and space fans, gathering possible answers to the question: What does it mean that a spacefaring nation won't be going to space anymore?

Surgical Anatomy Around the Orbit Barry M. Zide, 2006 This full-color surgical atlas provides a detailed, true-to-life view of periorbital anatomy as seen during an operative procedure. More than 130 photographs of fresh cadaver dissections and more than 100 vivid drawings by an award-winning ophthalmic artist enable surgeons to thoroughly preview this complex anatomy prior to surgery. Using his popular concept of facial zones, Dr. Zide depicts the fine anatomic details necessary for today's advanced cosmetic and reconstructive procedures. A chapter on the seventh cranial nerve shows what tissue is innervated and delineates the exact zone of safety. A chapter on anatomy for facial nerve blocks is included. A bound-in CD-ROM contains the book's 238 illustrations and extensive anatomic dissections.

Red Star in Orbit James E. Oberg, 1981 Describes the Russian space program, telling of unpublicized disasters as well as recent successes.

Frozen Orbit Patrick Chiles, 2020-01-07 THE BEGINNING OF LIFE AWAITS AT THE END OF THE SOLAR SYSTEM. A FROZEN ANSWER AT THE EDGE OF PLANETARY SPACE Set to embark on NASA's first expedition to the outer planets, the crew of the spacecraft Magellan learns someone else has beaten them by a few decades: a top-secret Soviet project codenamed Arkangel. Now during their long race to the Kuiper Belt, astronauts Jack Templeton and Traci Keene must unwind a decades-old mystery buried in the pages of a dead cosmonaut's journal. The solution will challenge their beliefs about the nature of humanity, and will force the astronauts to confront the question of existence itself. And the final answer lies at the edge of the Solar System, waiting to change everything. At the publisher's request, this title is sold without DRM (Digital Rights Management). About Farside by Patrick Chiles: The situations are realistic, the characters interesting, the perils harrowing, and the stakes could not be higher...The story is one of problem solving, adventure, survival, improvisation, and includes one of the most unusual episodes of space combat in all of science fiction. It would make a terrific movie.— John Walker, Ricochet.com ...a fast-paced and exciting story which bounces between the borders of technological thriller and science fiction...Farside is an impressive effort.—Mark Lardas, The Galveston County Daily News

Floating to Space John M. Powell, 2008 Book & DVD. From the Space Shuttle, to Soyuz, to Spaceship One, riding the explosion at the bottom of a rocket has historically been the only path to space. Is there another way? Floating to Space in an overview of the new technology of space-bound airships. What, the Goodyear blimp goes to Mars? Yes! The technology called ATO, Airship to Orbit is being developed right now. Hypersonic airships and cities floating at the edge of space are all part of this seemingly impossible idea. Beyond describing the concept, this book shows the amazing adventure of those who are building these giant craft and throwing them into the sky. Not just a fantasy, this book shows photographs and details from the nearly one hundred development flights conducted so far. . . Included are descriptions of the environment where these craft fly to the edge of space. New findings such as life twenty miles up and mile high plasma volcanoes are introduced for the first time outside of scientific journals. This book shows you how ATO is to be accomplished from a project and economic prospective. It also details the progress so far and lays out a blueprint of what is to come. Includes a DVD of remarkable footage taken during the many test flights of JP Aerospace's unique experiments floating to space.

Calculate the Orbit of Mars! Jane Clark,2021-09-09 This book shows readers how to calculate the orbit of Mars, based on their own observations and using observations made by the author. The historical, observational, and analytical aspects of the project to measure the orbit of Mars are all combined in this one book! Determining the orbit of Mars is particularly important, as originally solving this problem required the founding of modern science. Clark discusses how people came to believe in the Newtonian model of the Solar System, works through the mathematical basis for the theory of gravity, and shows how Newton ruled out the possibility of alternative theories. Readers also learn how it became possible to accurately measure the positions of Mars from a moving, spinning platform—the Earth. This mid-level observational challenge is well within reach of most serious amateur astronomers. For the observations, only a telescope with auto-guiding capability and the ability to mount a digital single lens reflex (DSLR) camera is required. For the calculations, it is assumed that the reader has a science, engineering, or mathematics background and is familiar with calculus, vectors, and trigonometry.
