State of the USA Health Indicators Institute of Medicine,Board on Population Health and Public Health Practice,Committee on the State of the USA Health Indicators,2009-03-17 Researchers, policymakers, sociologists and doctors have long asked how to best measure the health of a nation, yet the challenge persists. The nonprofit State of the USA, Inc. (SUSA) is taking on this challenge, demonstrating how to measure the health of the United States. The organization is developing a new website intended to provide reliable and objective facts about the U.S. in a number of key areas, including health, and to provide an interactive tool with which individuals can track the progress made in each of these areas. In 2008, SUSA asked the Institute of Medicine's Committee on the State of the USA Health Indicators to provide guidance on 20 key indicators to be used on the organization's website that would be valuable in assessing health. Each indicator was required to demonstrate: a clear importance to health or health care, the availability of reliable, high quality data to measure change in the indicators over time, the potential to be measured with federally collected data, and the capability to be broken down by geography, populations subgroups including race and ethnicity, and socioeconomic status. Taken together, the selected indicators reflect the overall health of the nation and the efficiency and efficacy of U.S. health systems. The complete list of 20 can be found in the report brief and book.

High School Graduation and College Readiness Indicator Systems Elaine M. Allensworth,Jenny Nagaoka,David W.

Johnson,2018-04-24 In districts across the country, school practitioners rely on early warning indicator systems (EWI) to identify students in need of support to graduate high school and be prepared for college. By organizing pieces of data on student performance into indicators, practitioners can develop and test school strategies to improve students' educational attainment with data that are readily available, making indicator systems a potentially powerful tool for supporting student outcomes. While the use of indicators for reaching school and district goals around students' educational attainment has been widely embraced, it is not always clear how to do so in ways that will lead to better educational attainment for students. Questions about how to use indicator systems effectively generally focus on: 1) How are indicators used to improve high school and college graduation rates, and 2) Which indicators should be the focus of an early warning or college readiness indicator system? These questions are intertwined. Decisions about which indicators are the best indicators to use depend on how they are being used, and questions about how to use indicators depend on the choice of indicators. This paper provides a brief overview of the current state of the use of indicators for improving students' educational attainment, considerations about which indicators to use when developing an indicator system, and some of the questions that have arisen as schools, districts, and states engage in these efforts. It is intended for people who are positioned between the research and practice spheres, such as district and state institutional researchers, or researchers at universities and research organizations who work closely with schools and districts. It may also be of interest to school and district administrators with a strong interest in developing and refining high school graduation and college readiness indicator systems, and an interest in the data and research behind such systems.

Coincident Indicators of Capital Flows Yanliang Miao,Ms.Malika Pant,2012-02-01 Capital flows data from Balance of Payments statistics often lag 3-6 months, which renders timely surveillance and policy deliberation difficult. To address the tension, we propose two coincident composite indicators for capital flows that improve upon existing proxies. We find that the most widely used proxy, the capital tracker, often overpredicts net flows by 30 percent. We augment the tracker into a composite indicator by assigning to it a lesser but optimally estimated weight while incorporating other regional and global coincident correlates of capital flows. The proposed composite indicator of net flows outperforms the capital tracker in its original format. To complement the indicator with an even timelier variant, we also utilize the EPFR high frequency coverage of gross bond and equity flows as an indicator on foreign investors' sentiment.

Community Quality-of-Life Indicators: Best Cases VI M. Joseph Sirgy,Rhonda Phillips,Don Rahtz,2013-05-24 This book is the sixth in a series covering best practices in community quality-of-life (QOL) indicators. The cases in this volume describe communities that have launched their own community indicators programs. Elements that are included in the descriptions are the history of the community indicators work within the target region, the planning of community indicators, the actual indicators that were selected, the data collection process, the reporting of the results, and the use of the indicators to guide community development decisions and public policy.

The Economic Performance Index (EPI): an Intuitive Indicator for Assessing a Country's Economic Performance Dynamics in an Historical Perspective Mr. Vadim Khramov,Mr. John Ridings Lee,2013-10-23 Existing economic indicators and indexes assess economic activity but no single indicator measures the general macro-economic performance of a nation, state, or region in a methodologically simple and intuitive way. This paper proposes a simple, yet informative metric called the Economic Performance

Index (EPI). The EPI represents a step toward clarity, by combining data on inflation, unemployment, government deficit, and GDP growth into a single indicator. In contrast to other indexes, the EPI does not use complicated mathematical procedures but was designed for simplicity, making it easier for professionals and laypeople alike to understand and apply to the economy. To maximize ease of understanding, we adopt a descriptive grading system. In addition to a Raw EPI that gives equal weights to its components, we construct a Weighted EPI and show that both indexes perform similarly for U.S. data. To demonstrate the validity of the EPI, we conduct a review of U.S. history from 1790 to 2012. We show that the EPI reflects the major events in U.S. history, including wars, periods of economic prosperity and booms, along with economic depressions, recessions, and even panics. Furthermore, the EPI not only captures official recessions over the past century but also allows for measuring and comparing their relative severity. Even though the EPI is simple by its construction, we show that its dynamics are similar to those of the Chicago Fed National Activity Index (CFNAI) and The Conference Board Coincident Economic Index® (CEI).

Near-Coincident Indicators of Systemic Stress Mr. Ivailo Arsov, Mr. Elie Canetti, Ms. Laura E. Kodres, Ms. Srobona Mitra, 2013-05-17

The G-20 Data Gaps Initiative has called for the IMF to develop standard measures of tail risk, which we identify in this paper with systemic risk. To understand the conditions under which tail risk is present, it is first necessary to develop a measure of what constitutes a systemic stress, or tail, event. We develop such a measure and use it to assess the performance of eleven near-term systemic risk indicators as 'early' warning of distress among top financial institutions in the United States and the euro area. Two indicators perform particularly well in both regions, and a couple of other simple indicators do well across a number of criteria. We also find that the sizes of institutions do not necessarily correspond with their contribution to spillover risk. Some practical guidance for policies is provided.
