Desire and Infinity in W. S. Merwin's Poetry Feng Dong,2021-12-15 In the first monograph on W. S. Merwin to appear since his death in 2019, Feng Dong focuses on the dialectical movement of desire and infinity that ensouls the poet's entire oeuvre. His analysis foregrounds what Merwin calls "the other side of despair," the opposite of humans' articulated personal and social agonies. Feng finds these presences in Merwin's evocations of what lingers on the edge of constantly updated socio-symbolic frameworks: surreal encounters, spiritual ecstasies, and abyssal freedoms. By examining Merwin's lifelong engagement with psychic fantasies, anonymous holiness, entities both natural and supernatural, and ghostly ancestors, Feng uncovers a precarious relation with the unarticulated, unrealized side of existence. Drawing on theories from Lacan, Žižek, Levinas, and Heidegger, *Desire and Infinity in W. S. Merwin's Poetry* reads a metaphysical possibility into the poet's work at the intersection between contemporary poetics, philosophy, and psychoanalysis.

The Dialectics of Diaspora: Memory, Location and Gender Mar Gallego Durán,2011-11-28 Aquest llibre reflecteix l'evolució en el camp dels estudis diaspòrics. Els articles han estat agrupats en dues seccions. La primera té com objectiu les experiències dels africans diaspòrics; la segona secció, amplia el radi de recerca i se centra en les representacions literàries de la diàspora dels asiàtic-americans, porto-riquenys i als anglo-europeus. De la mateixa manera, un aspecte no menys interessant d'aquest llibre són les múltiples maneres en les que s'han tornat a teoritzar les idees de Paul Gilroy i a aplicar-se a una infinitat d'escrits. De fet, els articles testifiquen la diàspora com una experiència que potencialment pot -com així succeeix- afectar a tot el món, pel que la diàspora es converteix en una representació metonímica de la pròpia experiència.

The Passion of Infinity Daniel Greenspan,2008-11-03 The Passion of Infinity generates a historical narrative surrounding the concept of the irrational as a threat which rational culture has made a series of attempts to understand and relieve. It begins with a reading of Sophocles' Oedipus as the paradigmatic figure of a reason that, having transgressed its mortal limit, becomes catastrophically reversed. It then moves through Aristotle's ethics, psychology and theory of tragedy, which redefine reason's collapses in moral-psychological rather than religious terms. By changing the way in which the irrational is conceived, and the nature of its relation to reason, Aristotle eliminates the concept of an irrationality which reason cannot in principle dissolve. The book culminates in an extensive reading of Kierkegaard's pseudonyms, who, in a critical retrieval of both Greek tragedy and Aristotle, prescribe their apparently pathological age a paradoxical task: develop a finite form of subjectivity willing to undergo an unthinkable thought - allow the transcendence of a god to enter into the mind as well as the marrow, to make a tragic appearance in which a limit to the immanence of human reason can again be established.

Green Computing with Emerging Memory Takayuki Kawahara,Hiroyuki Mizuno,2012-05 This volume describes computing innovation using non-volatile memory for a sustainable world. The text presents methods of design and implementation for non-volatile memory, allowing devices to be turned off normally when not in use, yet operate with full performance when needed.

Lectures in Game Theory for Computer Scientists Krzysztof R. Apt,Erich Grädel,2011-01-06 Games provide mathematical models for interaction. Numerous tasks in computer science can be formulated in game-theoretic terms. This fresh and intuitive way of thinking through complex issues reveals underlying algorithmic questions and clarifies the relationships between different domains. This collection of lectures, by specialists in the field, provides an excellent introduction to various aspects of game theory relevant for applications in computer science that concern program design, synthesis, verification, testing and design of multi-agent or distributed systems. Originally devised for a Spring School organised by the GAMES Networking Programme in 2009, these lectures have since been revised and expanded, and range from tutorials concerning fundamental notions and methods to more advanced presentations of current research topics. This volume is a valuable guide to current research on game-based methods in computer science for undergraduate and graduate students. It will also interest researchers working in mathematical logic, computer science and game theory.

High-Performance Big Data Computing Dhabaleswar K. Panda,Xiaoyi Lu,Dipti Shankar,2022-08-02 An in-depth overview of an emerging field that brings together high-performance computing, big data processing, and deep ILearning. Over the last decade, the exponential explosion of data known as big data has changed the way we understand and harness the power of data. The emerging field of high-performance big data computing, which brings together high-performance computing (HPC), big data processing, and deep learning, aims to meet the challenges posed by large-scale data processing. This book offers an in-depth overview of high-performance big data computing and the associated technical issues, approaches, and solutions. The book covers basic concepts and necessary background knowledge, including data processing frameworks, storage systems, and hardware capabilities; offers a detailed discussion of technical issues in accelerating big data computing in terms of computation, communication, memory and storage, codesign, workload characterization and benchmarking, and system deployment and management; and surveys benchmarks and workloads for evaluating big data middleware systems. It presents a detailed discussion of big data computing systems and applications with high-performance networking, computing, and storage technologies, including state-of-the-art designs for data processing and storage systems. Finally, the book considers some advanced research topics in high-performance big data computing, including designing high-performance deep learning over big data (DLoBD) stacks and HPC cloud technologies.

Subjectivity and Infinity Guoping Zhao,2020-05-18 This book formulates a new theory of subjectivity in the context of the claimed "death of the subject" in the post-modern and post-human age. The new theory is developed against the conception of the subject as a transcendental ego whose constitutive roles, recognition, and representation lead to the objectivization and totalization of the world and denial of its inner infinity and heterogeneity. Critically scrutinizing ideas from Bergson, James, Husserl, Heidegger, Derrida, Zen Buddhism, and Chinese Zhuangzi, and through an analysis of time and temporality, this book advances a number of new concepts, including "primal sensibility" and "pure experience," and proposes a porous structure of subjectivity with an ex-egological and ex-subjective zone that allows nothingness and absence to ground presence. Such a theory of subjectivity provides the basis for an understanding of thinking as imagination and self-identity as narrative presentation in the intersubjective world.

Inverse Heat Conduction James V. Beck,Ben Blackwell,Charles R. St. Clair, Jr.,1985-10-02 Here is the only commercially published work to deal with the

engineering problem of determining surface heat flux and temperature history based on interior temperature measurements. Provides the analytical techniques needed to arrive at otherwise difficult solutions, summarizing the findings of the last ten years. Topics include the steady state solution, Duhamel's Theorem, ill-posed problems, single future time step, and more.

Vector Quantization and Signal Compression Allen Gersho, Robert M. Gray, 2012-12-06 Herb Caen, a popular columnist for the San Francisco Chronicle, recently quoted a Voice of America press release as saying that it was reorganizing in order to eliminate duplication and redundancy. This quote both states a goal of data compression and illustrates its common need: the removal of duplication (or redundancy) can provide a more efficient representation of data and the quoted phrase is itself a candidate for such surgery. Not only can the number of words in the quote be reduced without losing information, but the statement would actually be enhanced by such compression since it will no longer exemplify the wrong that the policy is supposed to correct. Here compression can streamline the phrase and minimize the embarrassment while improving the English style. Compression in general is intended to provide efficient representations of data while preserving the essential information contained in the data. This book is devoted to the theory and practice of signal compression, i.e., data compression applied to signals such as speech, audio, images, and video signals (excluding other data types such as financial data or general purpose computer data). The emphasis is on the conversion of analog waveforms into efficient digital representations and on the compression of digital information into the fewest possible bits. Both operations should yield the highest possible reconstruction fidelity subject to constraints on the bit rate and implementation complexity.

The Story of Life Christopher McKeon, 2022-08-01 “Creator, do you have a family?” said my youngest. And he answered! Thus began our healing through awareness with Mina (how we address the human person—God—who built our universe), the archangels, and many others in spirit world. Our explosive conversation over the next 18 hours revealed God, angels, humanity, why we are as we are, and our universe as never before imagined. Spirit mediums Christopher McKeon and his daughters Ayako and El shatter the paradigms and magical thinking handed down to us through history by religion, philosophy, mysticism, and science. Experience, as we did, healing of your trauma, pain, and suffering through gaining awareness of your true reality. Included are ten historical spirit persons who give short testimonies of their experiences to help explain certain aspects of our—your—life reality. You'll never feel the same, or look at the world around you the way you did, as your awareness takes flight from unawareness with new wings on new winds. Be prepared for a story of life like nothing you've ever experienced. Best of all, you'll learn how you, too, can talk to Mina, 'angels,' your spirit family and guides, and willing spirit persons to get your own answers (without having to take ours on faith) as a ground-floor participant in the nascent worldwide energy testing community! For Mina, this book is all about healing your pain and suffering by revealing our personal, and larger, human reality. You'll find it all inside. A chapter summary: Part I is a narrative of our experience discovering energy testing and our shocking meet-up with our ‘creator,’ Part II describes how you and our universe are infinite and eternal as existence, time, space, and consciousness, including: —an overview regarding our true natural reality: matter, energy, gravity, mass, lightspeed (normal and actual), relativity and the quantum, black holes, the Big Bang, quantum entanglement/tunneling, how the natural universe interacts with the supranatural (spirit) universe; —what is All Existence of which our universe is a part; —all about consciousness (psyche) and how our physical body interacts with our spirit body; —‘psyche fundamental force’ (Intentionality); —and culture as the individual; Part III describes the origin of humanity and includes: —the birth of humanity; —who and what our creator is —how our universe came to be our home —why human life seems destructive and filled with pain and suffering; Part IV is the real ‘woo-woo’ of the book and includes: —how we exist and live as physicospirit-embodied individuals; —our mind, conscience, PTSD; —killing, abortion, euthanasia, suicide; —lineage and DNA; —what happens at death; —fate, destiny, and free will; —suffering, hope, depression, reincarnation, and the origin of slavery; —happiness, love and hate; —government and society; —evil; —beauty and ugliness; —spirit world; —the chakras and aura as they really are and what they do; —Intentionality; —who and what ‘angels’ really are; —history of Earth’s humanity and radiometric dating; —our physicospirit self; —religion; —what is healing, how to heal; —human freedom; —astral projection, the Akashic Records; —marriage, sex; —animal familiars; —ten historical spirit persons' testimony: Duke Wen of Zhou, Hitler, Hannibal Gisco, Mio, Mnidho of Nihoa, Tethys, Jesus, Sun-myung Moon, Muhammad, Buddha; Part V teaches you energy testing so you can learn how to talk to Mina (God), 'angels,' your spirit family, spirit guides, and any willing spirit person to get your own answers to life.

Turing's Man J. David Bolter, 2014-02-01 Trained in both classics and computer science, Bolter considers the cultural impact of computers on our age, comparing the computer to earlier technologies that redefined fundamental notions of time, space, language, memory, and human creativity. Surprisingly, he finds that in many ways the outlook of the computer age bears more resemblance to that of the ancient world than to that of the Enlightenment. The classical philosopher and the computer programmer share a suspicion of infinity, an acceptance of necessary limitations on human achievement, and a belief that results are more important than motives. Although Bolter fears that the growing use of computers may well diminish out culture's sense of the historical and intellectual context of human endeavor, he contends that the computer also offers new ways of looking at intellectual freedom, creativity, and the conservation of precious resources.

Transmitting and Gaining Data Rudolf Ahlswede, 2014-11-15 The calculation of channel capacities was one of Rudolf Ahlswede's specialties and is the main topic of this second volume of his Lectures on Information Theory. Here we find a detailed account of some very classical material from the early days of Information Theory, including developments from the USA, Russia, Hungary and (which Ahlswede was probably in a unique position to describe) the German school centered around his supervisor Konrad Jacobs. These lectures made an approach to a rigorous justification of the foundations of Information Theory. This is the second of several volumes documenting Rudolf Ahlswede's lectures on Information Theory. Each volume includes comments from an

invited well-known expert. In the supplement to the present volume, Gerhard Kramer contributes his insights. Classical information processing concerns the main tasks of gaining knowledge and the storage, transmission and hiding of data. The first task is the prime goal of Statistics. For transmission and hiding data, Shannon developed an impressive mathematical theory called Information Theory, which he based on probabilistic models. The theory largely involves the concept of codes with small error probabilities in spite of noise in the transmission, which is modeled by channels. The lectures presented in this work are suitable for graduate students in Mathematics, and also for those working in Theoretical Computer Science, Physics, and Electrical Engineering with a background in basic Mathematics. The lectures can be used as the basis for courses or to supplement courses in many ways. Ph.D. students will also find research problems, often with conjectures, that offer potential subjects for a thesis. More advanced researchers may find questions which form the basis of entire research programs.

Zero to Infinity Peter Rowlands,2007 Unique in its field, this book uses a methodology that is entirely new, creating the simplest and most abstract foundations for physics to date. The author proposes a fundamental description of process in a universal computational rewrite system, leading to an irreducible form of relativistic quantum mechanics from a single operator. This is not only simpler, and more fundamental, but also seemingly more powerful than any other quantum mechanics formalism available. The methodology finds immediate applications in particle physics, theoretical physics and theoretical computing. In addition, taking the rewrite structure more generally as a description of process, the book shows how it can be applied to large-scale structures beyond the realm of fundamental physics. Sample Chapter(s). Chapter 1: Zero (228 KB). Contents: Zero; Why Does Physics Work?; The Emergence of Physics; Groups and Representations; Breaking the Dirac Code; The Dirac Nilpotent; Nonrelativistic Quantum Mechanics and the Classical Transition; The Classical and Special Relativistic Approximations; The Resolution of Paradoxes; Electric, Strong and Weak Interactions; QED and Its Analogues; Vacuum; Fermion and Boson Structures; A Representation of Strong and Weak Interactions; Grand Unification and Particle Masses; The Factor 2 and Duality; Gravity and Inertia; Dimensionality, Strings and Quantum Gravity; Nature's Code; Nature's Rule; Infinity. Readership: Researchers in quantum, theoretical and high energy physics.
