The Human Body: Concepts of Anatomy and Physiology Bruce Wingerd,Patty Bostwick Taylor,2020-04-06 The new edition of Bruce Wingerd's The Human Body: Concepts of Anatomy and Physiology helps encourage learning through concept building, and is truly written with the student in mind. Learning Concepts divide each chapter into easily absorbed subunits of information, making learning more achievable. Since students in a one-semester course may have little experience with biological and chemical concepts, giving them tools such as concept statements, concept check questions, and a concept block study sheet at the end of each chapter help them relate complex ideas to simple everyday events. The book also has a companion Student Notebook and Study Guide (available separately) that reinvents the traditional study guide by giving students a tool to help grasp information in class and then reinforce learning outside of class.

Holistic Anatomy Pip Waller,2012-05-29 An engaging and accessible exploration of human anatomy, physiology, and pathology—through a holistic lens Complementary and alternative approaches to health and medicine have become increasingly widespread as the limits of conventional treatments become more apparent. Holistic Anatomy presents an authoritative study of anatomy, physiology, and pathology, but it expands the discussion by connecting the science of the body to a variety of alternative modalities to explore how human beings exist within—and interact with—their environment, and how they experience existence in emotional and spiritual terms. Author and massage therapist Pip Waller interweaves basic scientific terminology and detailed descriptions with informal—and sometimes humorous—observations, facts, and ideas about life. The mechanisms, structure, and functions of the body are explored, along with how they relate to spiritual and energetic paradigms, emotions, and ecological principles. The first half of the book covers basic anatomy and physiology, describing each major system of the body and how they interrelate. This part includes a thoughtful discussion of aging and the dying process. The second half focuses on models of health and disease, both traditional and holistic. Topics include western pathology, emotional health, five element medicine, and the spiritual cause for disease.
