Biological and Medical Data Analysis José María Barreiro, Fernando Martín-

Sanchez, Víctor Maojo, Ferran Sanz, 2004-12-21

This year, the 5th International Symposium on Medical Data Analysis has experimented an apparently slight modification. The word biological has been added to the title of the conferences. The motivation for this shift goes beyond the wish to attract a different kind of professional. It is linked to recent trends to produce a shift within various biomedical areas towards genomics-based research and practice. For instance, medical informatics and bioinformatics are being linked in a synergic area denominated biomedical informatics. Similarly, patient care is being improved, leading to concepts and areas such as molecular medicine, genomic medicine or personalized healthcare. The results from different genome projects, the advances in systems biology and the integrative approaches to physiology would not be possible without new approaches in data and information processing. Within this scenario, novel methodologies and tools will be needed to link clinical and genomic information, for instance, for genetic clinical trials, integrated data mining of genetic clinical records and clinical databases, or gene expression studies, among others. Genomic medicine presents a series of challenges that need to be addressed by researchers and practitioners. In this sense, this ISBMDA conference aimed to become a place where researchers involved in biomedical research could meet and discuss. For this conference, the classical contents of former ISMDA conferences were updated to incorporate various issues from the biological fields. Similarly to the incorporation of these new topics of the conference, data analysts will face, in this world of genomic medicine and related areas, significant challenges in research, education and practice.

Implementation of Self-testing of the International Normalized Ratio Jacqueline R.

Clayton, 2011 Background: Warfarin therapy (WT) is indicated for managing oral anticoagulation therapy (OAT) in persons with atrial fibrillation, deep vein thrombosis, pulmonary embolism, or a mechanical heart valve to reduce the risk of a stroke. Global Significance: A stroke is the leading cause of disability and the third leading cause of death in the United States, with an estimated annual total cost of \$57.9 billion. Given the aging of our population, it is projected that 7.5 million individuals will have atrial fibrillation in the United States by the year 2020 based on an expected prevalence of 13.5% for individuals greater than 75 years of age. The project manager cared for 50 patients on WT during the project. Medical expertise is needed to manage OAT in a safe manner. Frequent international normalized ratio (INR) testing was required until the recommended range was achieved. The quality of life was affected for persons due to the numerous food, alcohol, and drug interaction precautions, because of OAT, and the need to return to the physician's office for blood tests. Foreground: There were significant gaps associated with WT: a lack of patient knowledge of WT; a lack of knowledge by the healthcare provider (HCP) that self-testing was a viable option for managing WT. The evidence-based framework for this project was the precede/proceed planning model. Methods: A literature review and synthesis for self-testing was conducted to identify the best evidence and current guidelines. The purpose of this project was to change the methodology of how the INR was tested in this rural farming community. The change involved the way blood testing was collected; participants collected their own blood sample. The following primary outcome measures were tracked prior to launching self-testing and for the month after implementation: each participant's INR pre- and post-self-testing, therapeutic range pre- and post-self-testing, adverse drug event (ADE) rate pre- and post-self-testing, and self-reported satisfaction with self-testing. Findings/Results: The project utilized available technology, and simplified the processes involved with INR monitoring using a portable coagulometer. The data provided the participant with knowledge on the actual blood level

and eased the participants' distress or worries related to anticoagulation. Freedom to travel was a benefit for participants. The concept of self-care was evident in the participants' willingness to self-test. The project results agreed with the predicted outcomes. Self-testing attenuated OAT as it reduced the morbidity and mortality rate. The INR results were within therapeutic range throughout the project. The project manager was able to leverage resources to support self-testing, as cost-effectiveness and time-saved were evident with little financial impact on the medical practice.

Conclusion/Recommendations: The project manager recommended self-testing of the INR to augment the plan of care. Instituting access to care with self-testing provided a tool for testing the INR in the privacy of the participants' home, detected subtle drifts out of the recommended therapeutic range, and provided access to care.

Clinical Guidelines for Advanced Practice Nursing Geraldine M. Collins-Bride, JoAnne M. Saxe, 2013 Clinical Guidelines for Advanced Practice Nursing: An Interdisciplinary Approach, Second Edition is an accessible and practical reference designed to help nurses and students with daily clinical decision making. Written in collaboration with certified nurse midwives, clinical nurse specialists, nurse practitioners, nutritionists, pharmacists, and physicians, it fosters a team approach to health care. Divided into four areas--Pediatrics, Gynecology, Obstetrics, and, Adult General Medicine--and following a lifespan approach, it utilizes the S-O-A-P (Subjective-Objective-Assessment-Plan) format. Additionally, the authors explore complex chronic disease management, health promotion across the lifespan, and professional and legal issues such as reimbursement, billing, and the legal scope of practice. Unique and inclusive of topics and issues unaddressed in other texts, Clinical Guidelines for Advanced Practice Nursing: An Interdisciplinary Approach, Second Edition incorporates care of transgender individuals, intimate partner violence, health care maintenance for adults with developmental disabilities, and attention deficit hyperactivity disorder (ADHD).

Cardiac Arrhythmias 2003 Antonio Raviele, 2012-12-06 The field of cardiac arrhythmias has been evolving so fast during the last years that scientific meetings are frequently necessary to present technological advances, to communicate results of relevant and innovative researches, to assess the impact of recently developed diagnostic and therapeutical tools, to discuss controversial aspects, and to reach a consensus on the most appropriate evaluation and management of specific problems. This is the main reason why in 1988 we started to organize a biannual International Workshop on Cardiac Arrhythmias. Since then many editions of the workshop have taken place and over the years the fame and popularity of the event have increased continuously. This book contains the Proceedings of the Eighth Edition of the Workshop th th held in Venice at the Fondazione Giorgio Cini from the 5 to the 8 of October 2003. During the meeting all the principal aspects of the different arrhythmias, from epidemiology to physiopathology, electrogenetic mechanisms, diagnosis, prognosis, treatment, pshycological implications and economic costs have been discussed among the numerous experts and participants.

Innovations in Applied Artificial Intelligence Floriana Esposito, 2005-06-16 "Intelligent systems are those which produce intelligent o?springs." AI researchers have been focusing on developing and employing strong methods that are capable of solving complex real-life problems. The 18th International Conference on Industrial & Engineering Applications of Arti?cial Intelligence & Expert Systems (IEA/AIE 2005) held in Bari, Italy presented such work performed by many scientists worldwide. The Program Committee selected long papers from contributions presenting more complete work and posters from those reporting ongoing research. The Committee enforced the rule that only original and unpublished work could be considered for inclusion in these proceedings. The Program Committee selected 116 contributions from the 271 subm- ted papers which cover the following topics: arti?cial systems, search engines, intelligent interfaces,

knowledge discovery, knowledge-based technologies, natural language processing, machine learning applications, reasoning technologies, uncertainty management, applied data mining, and technologies for knowledge management. The contributions oriented to the technological aspects of AI and the quality of the papers are witness to a research activity clearly aimed at consolidating the theoretical results that have already been achieved. The conference program also included two invited lectures, by Katharina Morik and Roberto Pieraccini.

Many people contributed in different ways to the success of the conference and to this volume. The authors who continue to show their enthusiastic interest in applied intelligence research are a very important part of our success. We highly appreciate the contribution of the members of the Program Committee, as well as others who reviewed all the submitted papers with efficiency and dedication.

Emerging Pathologies in Cardiology M.M. Gulizia, 2006-09-19 Clinical practice is evolving at a rapid pace, nowhere more so than in the field of cardiology. Acute Coronary Syndromes, Sudden Cardiac Death, Heart Failure, Atrial Fibrillation, Syncope, and Prevention of Global Cardiovascular Risk are the main Emerging Pathologies to which many investigators are addressing their researches. Less than 10 years ago, some of them were considered of relevance only to internists, and some others as a common benign arrhythmia or an ineluctable illness. Today, their prevalence amongst the population represents one of the major public health problems at the beginning of the third millennium. The need to have a state of the art overview of the epidemiology, pathophysiological and electrogenetic mechanisms, diagnosis, pharmacological or electrical treatment, prognosis, patient management in and out of hospital, organisational and economical implications of these emerging pathologies and the success of the previous edition inspired us to organise the second edition of this biannual International Meeting. This book contains the Proceedings of the Mediterranean Cardiology Meeting held in Taormina, Italy, 7-9 April 2005. Like the previous volume, it boasts the participation of many nationally and internationally renowned speakers in the field of clinical and interventional cardiology who will interact actively with the delegates.

Telemedicine Georgi Grashew, Stefan Rakowsky, 2011-06-20 Telemedicine is a rapidly evolving field as new technologies are implemented for example for the development of wireless sensors, quality data transmission. Using the Internet applications such as counseling, clinical consultation support and home care monitoring and management are more and more realized, which improves access to high level medical care in underserved areas. The 23 chapters of this book present manifold examples of telemedicine treating both theoretical and practical foundations and application scenarios.
