Do you feel a tightness in your chest and a racing heart anytime you have to speak up for yourself, whether in a large group or small? Do you vigilantly avoid potential panic triggers, and always think the worst is bound to happen? If so, you may be one of the 40 million Americans who suffer from anxiety. Symptoms run the gamut from mildly embarrassing but tolerable to persistent and debilitating. While feelings of worry, dread, panic, social unease, and general anxiety are common, their impact is insidious, leaving sufferers feeling worn out and often hopeless. This book is your answer. Drawing on fresh insights into the anatomy of the anxious brain, Dr. Wehrenberg gets to the biologically based heart of the problem and offers readers practical, effective tips to manage their anxiety on a day-to-day basis. From diaphragmatic breathing and self-talk, to mindfulness, muscle relaxation, and plan to panic strategies, you can learn to train your brain, conquer your stress and anxiety, and regain control of your life.

TRUST IN ROBOTS Sabine T. Koeszegi ,Markus Vincze,2022-12-15 Robots are increasingly becoming prevalent in our daily lives within our living or working spaces. We hope that robots will take up tedious, mundane or dirty chores and make our lives more comfortable, easy and enjoyable by providing companionship and care. However, robots may pose a threat to human privacy, safety and autonomy; therefore, it is necessary to have constant control over the developing technology to ensure the benevolent intentions and safety of autonomous systems. Building trust in (autonomous) robotic systems is thus necessary. The title of this book highlights this challenge: “Trust in robots–Trusting robots”. Herein, various notions and research areas associated with robots are unified. The theme “Trust in robots” addresses the development of technology that is trustworthy for users; “Trusting robots” focuses on building a trusting relationship with robots, furthering previous research. These themes and topics are at the core of the PhD program “Trust Robots” at TU Wien, Austria.

An Improved Lightweight Privacy Preserving Authentication Scheme for SIP-Based-VoIP Using Smart Card Saeed Ullah Jan, 2017-03-09 In the past few years, secure information sharing became very popular in the area of immigration, military applications, healthcare, education, foreign affairs, etc. As secure communication utilizes both wireless and wired communication mechanizations for exchanging sensitive information, security and privacy of the information exchange cannot be easily compromised. To moderate the security, integrity, authenticity, and privacy issues related to information exchange, numerous authentication mechanisms have been recommended by different researchers in the literature in recent times, but these are vulnerable to prospective security flaws such as masquerade, insider, replay, impersonation, password guessing, server spoofing, denial-of-service attacks and, in addition, have failed to deliver mutual authentication. In the past few years we have also witnessed a balanced growth in the acceptance of VoIP (Voice over IP) facilities because the numerous Web and VoIP applications depend

on huge and extremely distributed infrastructures to process requests from millions of users in an appropriate manner. Due to their extraordinary desires, these large-scale internet applications have frequently surrendered security for other objectives such as performance, scalability and availability. As a result, these applications have characteristically favored weaker, but well-organized security mechanisms in their foundations. Session Initiation Protocol (SIP) is an application and presentation layers signaling protocol that initiates, modifies, and terminates IP-based multimedia sessions. Implementing SIP for secure communication has been a topic of study for the past decade, and several proposals are available in the research domain. However, security aspects are not addressed in most of these proposals, because SIP is exposed to several threats and faces security issues at these layers. Probes for SIP (Session Initiation Protocol) servers have been conveyed for many years. To gather more details about these activities the author has designed a scheme for SIP servers in a network and composed data about some popular attacks. Furthermore, he explains his interpretations and guidance on how to prevent these attacks from being successful. Biometrics, a new field of research, has also been dealt with in this research by means of a “three-factor authentication scheme”, in which one factor is biometrics.

Advances in Biomedical Sensing, Measurements, Instrumentation and Systems Aimé Lay-Ekuakille, 2009-12-24 Advances in technological devices unveil new architectures for instrumentation and improvements in measurement techniques.
