Qualitative Research in Intelligence and Marketing Alf H. Walle, 2000-10-30 Although competitive intelligence and contemporary marketing research evolved from different intellectual traditions, both are indebted to qualitative methods of research and analysis. Walle shows that by merging their strategies in relevant ways, both fields grow even more robust and responsive to the needs of business clients and decision makers. Written by a noted humanist/social scientist with a wide ranging background in competitive intelligence and marketing research, this book can be viewed as a breakthrough. It is the first book to juxtapose, compare, and integrate the qualitative methods of marketing research with those of competitive intelligence. Among its many important features is a discussion of how to conduct a qualitative audit that assesses the degree to which an organization is able to take full advantage of qualitative analytic techniques. Walle reminds us that the qualitative social sciences and humanities have a strong tradition within intelligence, one that dates back to World War II. Although innovations from the qualitative social sciences and humanities were developed 50 years ago, they were allowed to atrophy as the principle researchers of the time re-entered civilian life. Walle updates and revives them, and shows readers how to do it themselves for their own business purposes. The book reintroduces the World War II-era culture at a distance method that applied qualitative social sciences and humanities to intelligence, but updates them in terms of advances that have taken place since then. It also provides useful means to merge competitive intelligence and contemporary marketing research in ways that will result in collaboration and mutual understanding. Finally, Walle provides an appendix that discusses how to recruit and motivate researchers, whose training comes out of the humanities but whose contributions to business will prove of exceptional value. This is an important new resource for

marketing practitioners and graduate level students and their teachers.

Transforming U.S. Intelligence Jennifer E. Sims,Burton Gerber,2005-08-24 The intelligence failures exposed by the events of 9/11 and the missing weapons of mass destruction in Iraq have made one thing perfectly clear: change is needed in how the U.S. intelligence community operates. *Transforming U.S. Intelligence* argues that transforming intelligence requires as much a look to the future as to the past and a focus more on the art and practice of intelligence rather than on its bureaucratic arrangements. In fact, while the recent restructuring, including the creation of the Department of Homeland Security, may solve some problems, it has also created new ones. The authors of this volume agree that transforming policies and practices will be the most effective way to tackle future challenges facing the nation's security. This volume's contributors, who have served in intelligence agencies, the Departments of State or Defense, and the staffs of congressional oversight committees, bring their experience as insiders to bear in thoughtful and thought-provoking essays that address what such an overhaul of the system will require. In the first section, contributors discuss twenty-first-century security challenges and how the intelligence community can successfully defend U.S. national interests. The second section focuses on new technologies and modified policies that can increase the effectiveness of intelligence gathering and analysis. Finally, contributors consider management procedures that ensure the implementation of enhanced capabilities in practice. *Transforming U.S. Intelligence* supports the mandate of the new director of national intelligence by offering both careful analysis of existing strengths and weaknesses in U.S.

intelligence and specific recommendations on how to fix its problems without harming its strengths. These recommendations, based on intimate knowledge of the way U.S. intelligence actually works, include suggestions for the creative mixing of technologies with new missions to bring about the transformation of U.S. intelligence without incurring unnecessary harm or expense. The goal is the creation of an intelligence community that can rapidly respond to developments in international politics, such as the emergence of nimble terrorist networks while reconciling national security requirements with the rights and liberties of American citizens.
