

International Patents

Fred K. Carr

International Patent-Legislation and Developing Countries Ulf Anderfelt, 2013-12-01 THE INTERNATIONAL PATENT-LEGISLATION AND DEVELOPING COUNTRIES A major concern today in many fields of international cooperation is the development of the nonindustrialized part of the world. This was not always so. Until fairly recently contacts among States were basically limited to diplomatic intercourse. The concept of State sovereignty naturally led to the application of the principle of legal reciprocity between States. In the few areas outside diplomatic relations where international cooperation developed during the last century the same principle of legal reciprocity was applied. The cooperation that did take place was mostly among a limited number of Western States. In case countries outside this group wished to participate they were free to do so on accepting the traditional standards for such cooperation. Though a few countries, which today would have been or are known as developing countries, did join in various schemes of international cooperation, the majority of them remained outside. Moreover, a large number of States, which today are known as developing, did not exist as sovereign States at the time. One of the areas in which a system of international cooperation was set up in the latter part of the nineteenth century was that of patent protection.

International Patent Law Alexander James Stack, 2011-01-01 'For the newcomer to intellectual property, this book is a wonderful introduction to

global innovation policy debates and the difficulties in identifying optimal patent strategies. For those in the field, the volume provides an engaging examination of the complex interactions among heterogeneous national priorities, demands for an efficient environment for global trade in knowledge-intensive assets, and the capabilities of various international institutions – particularly WIPO and the WTO – to foster the development of, and administer, sound international patent policy.' – Rochelle Dreyfuss, New York University School of Law, US 'In this book, Alex Stack raises and explores critically important questions with respect to this body of experience: When is international patent law cooperation and harmonization welfare-enhancing? What is the role of international institutions – WIPO and the WTO – in furthering such harmonization? Stack explores these questions from a global welfarist, rationalist perspective. Using tools from new institutional economics, he explores design implications for international institutions, focusing on WIPO and the WTO, analyzing grounds for international cooperation as collective action problems and applying historical, political and transaction cost analysis. . . This book provides a subtle, insightful, and original analysis of the evolution of institutional arrangements for the international harmonization of patent laws that will be of immense value to scholars and practitioners involved in international harmonization efforts in intellectual property and cognate areas of commercial law. It will surely

quickly become accepted as the seminal reference work in these fields.' – From the foreword by Michael Trebilcock, University of Toronto, Canada

When is international patent law cooperation and harmonization welfare-enhancing? What is the role of international institutions – WIPO and the WTO – in furthering such harmonization? This book explores these questions from a global welfarist, rationalist perspective. It grounds its analysis in innovation theory and a examination of patent law and prosecution, incorporating the uncertainty of patent law's impact on welfare at a detailed level, dynamic changes, the skewed nature of patent value and the difficulty of textually capturing patent concepts. Using tools from new institutional economics, it explores future design implications for international institutions, analyzing grounds for international cooperation as collective action problems and applying historical, political and transaction cost analyses. Academics, students and practitioners interested in international economic law, specifically in respect of patents, innovation and intellectual property, the TRIPs Agreement, the WTO and WIPO will find this book essential. It will also prove insightful for researchers whose primary background is in international relations or international political economy, but are seeking an introduction to the patent and intellectual property field.

International Patent Rights Harmonisation Weinian Hu, 2017-05-08 With reference to China, this book examines the course of international patent rights harmonisation; its characteristics as well as impediments. It evaluates the case of China's patent law development over the course of the last three decades by drawing on the most up-to-date Chinese language sources. In the process, the volume focuses on China's patent legislation, its achievements and weaknesses, as well as the intrinsic limitations, especially as far as enforcement is concerned. The author pays close attention to the unique societal background in China, a country that did not provide constitutional recognition to private property rights until 2004 and where a property law entered into force as late as 2013, 30 years after the first promulgation of the patent law. Global trade policy makers, IP professionals and businesses will benefit from the insights presented by the chapters as they will help them to appreciate the achievements and the controversies pursuant to China's efforts in patent protection. While serving as a useful case study for countries seeking to leverage patent protection as a driver for economic development, the book will equally

facilitate Chinese legislature to reflect on its patent legislation development, specifically on legislative policy choices. An additional analytical strength of the volume is that it compares the Chinese patent legislation with the American Invents Act and the European Patent Convention. It discovers the differences between the three patent legislations by using the minimum patent protection standards set down by the TRIPS Agreement as the benchmark. The results of the comparisons suggest that China has successfully harmonised its patent legislation with the global patent protection system, and often opts for higher patent protection standards. The book also considers whether China could learn lessons from Japan and India in their respective patent legislation and policy choices. With China undertaking a fourth patent law amendment, the provisions contained in the second draft of the Patent Law 2015, which was published in December 2015, are included in the analysis.

Patents Handbook Fred K. Carr, 2009-04-09 This work first provides a general overview of the U.S. patent system, covering such issues as the patent document and patent infringement. The requirements of the invention and the conditions for patentability are discussed, with a focus on the patent application and the approval process. Major patent offices and international patent treaties are next examined, providing a full description of both the U.S. and international patent and classification systems. Methods for searching patent documents, the requirements of a reference, and general patent rights are discussed.

International Patent Law and Policy Margo A. Bagley, Ruth L. Okediji, Jay A. Erstling, 2013 This casebook provides comparative and international materials for a range of patent law topics, emphasizing the doctrinal, normative and practice-related issues resulting from global harmonization and cooperation efforts, the impact of such efforts on countries at different levels of economic development, an overview of the principal international intellectual property regimes, discussion of key policy issues that will frame international patent law's future, and coverage of multinational patent enforcement.

International Patenting Strategies of Chinese Residents: An Analysis of Foreign-Oriented Patent Families World Intellectual Property Organization, Mila Kashcheeva, Sacha Wunsch-Vincent, Hao Zhou, 2014 This paper analyzes Chinese patenting abroad by using WIPO's foreign-oriented patent family dataset and a respective enterprise questionnaire. It finds that by the turn of the century China emerged as major actor in terms of international patenting. While this is changing rapidly, the share of Chinese patents which get filed abroad is still a fraction of total patents filed at home and most patents still also only target one foreign IP office. Chinese foreign-oriented patent families are concentrated in a few technology fields, and a few Chinese firms are responsible for a large share of total Chinese patents filed abroad.

Global Patents Marketa Trimble, 2012-02-14 Global Patents: Limits of Transnational Enforcement explains why a global patent does not exist. It identifies the barriers to its creation from both historical and current perspectives, and discusses the difficulties that arise as inventors, investors, and businesses strive to protect their inventions in the widest territory possible. The author analyzes the options available to patent holders, and explains how a country's patent law may be used to stop or limit the exploitation of an invention patented in that country, and even in other countries where the invention is not patented.
