## **Specification and Verification of Concurrent Systems**

Charles Rattray, 2013-11-11 This volume contains papers presented at the BCS-FACS Workshop on Specification and Verification of Concurrent Systems held on 6-8 July 1988, at the University of Stirling, Scotland. Specification and verification techniques are playing an increasingly important role in the design and production of practical concurrent systems. The wider application of these techniques serves to identify difficult problems that require new approaches to their solution and further developments in specification and verification. The Workshop aimed to capture this interplay by providing a forum for the exchange of the experience of academic and industrial experts in the field. Presentations included: surveys, original research, practical experience with methods, tools and environments in the following or related areas: Object-oriented, process, data and logic based models and specification methods for concurrent systems Verification of concurrent systems Tools and environments for the analysis of concurrent systems Applications of specification languages to practical concurrent system design and development. We should like to thank the invited speakers and all the authors of the papers whose work contributed to making the Workshop such a success. We were particularly pleased with the international response to our call for papers. Invited Speakers Pierre America Philips Research Laboratories University of Warwick Professor M. *Accelerator Programming Using Directives* Sunita

Chandrasekaran, Guido Juckeland, Sandra Wienke, 2019-01-23 This book constitutes the refereed post-conference proceedings of the

5th International Workshop on Accelerator Programming Using Directives, WACCPD 2018, held in Dallas, TX, USA, in November 2018. They are organized in the following three sections: applications; using openMP; and program evaluation.

Biostatistics with R Babak Shahbaba, 2011-12-15 Biostatistics with R is designed around the dynamic interplay among statistical methods, their applications in biology, and their implementation. The book explains basic statistical concepts with a simple yet rigorous language. The development of ideas is in the context of real applied problems, for which step-by-step instructions for using R and R-Commander are provided. Topics include data exploration, estimation, hypothesis testing, linear regression analysis, and clustering with two appendices on installing and using R and R-Commander. A novel feature of this book is an introduction to Bayesian analysis. This author discusses basic statistical analysis through a series of biological examples using R and R-Commander as computational tools. The book is ideal for instructors of basic statistics for biologists and other health scientists. The step-by-step application of statistical methods discussed in this book allows readers, who are interested in statistics and its application in biology, to use the book as a self-learning text.

**Graph Drawing** David Eppstein, Emden R Gansner, 2010-03-10 This volume constitutes the refereed proceedings of the 17th International Symposium on Graph Drawing, GD 2009, held in Chicago, USA, during September 2009. The 31 revised full papers and 4 short papers presented were carefully reviewed and selected out of 79 submissions. Furthermore, 10 posters were accepted in a separate submission process.

Structures and Stochastic Methods A.S. Cakmak, 2013-10-22 Despite advances in the field of geotechnical earthquake engineering, earthquakes continue to cause loss of life and

property in one part of the world or another. The Third International Conference on Soil Dynamics and Earthquake Engineering, Princeton University, Princeton, New Jersey, USA, 22nd to 24th June 1987, provided an opportunity for participants from all over the world to share their expertise to enhance the role of mechanics and other disciplines as they relate to earthquake engineering. The edited proceedings of the conference are published in four volumes. This volume covers: Structures, Dams, Retaining Walls and Slopes, Underground Structures, and Stochastic Methods. Together with its companion volumes, it is hoped that it will contribute to the further development of techniques, methods and innovative approaches in soil dynamics and earthquake engineering.

*Modern Probability Theory and Its Applications* Emanuel Parzen, 1960

*Introduction to Statistical Methods for Biosurveillance* Ronald D. Fricker, 2013-02-25 Bioterrorism is not a new threat, but in an increasingly interconnected world, the potential for catastrophic outcomes is greater today than ever. The medical and public health communities are establishing biosurveillance systems designed to proactively monitor populations for possible disease outbreaks as a first line of defense. The ideal biosurveillance system should identify trends not visible to individual physicians and clinicians in near-real time. Many of these systems use statistical algorithms to look for anomalies and to trigger epidemiologic investigation, quantification, localization and outbreak management. This book discusses the design and evaluation of statistical methods for effective biosurveillance for readers with minimal statistical training. Weaving public health and statistics together, it presents basic and more advanced methods, with a focus on empirically demonstrating added value. Although the emphasis is on epidemiologic and syndromic surveillance, the statistical methods can be applied to a broad class of public health surveillance problems.

The Intersection of Cultures Joel Spring, 2017-09-29 The Intersection of Cultures: Multicultural Education in the United States and the Global Economy, Fourth Edition offers a unique, problem-solving approach to the complex issues involved in educating culturally and linguistically diverse students. Perfect for any course devoted wholly or in part to the study of multicultural education, this text addresses a wealth of topics. A particular focus in this edition is the current global migration of peoples, and the tension between local and global cultures. Part One, Multiculturalism, includes chapters on cultural differences and schooling, dominated cultures, and immigrant cultures. Chapters in Part Two, Cultural Frames of Reference, address monoculturalism, biculturalism, and ethnic identity; multicultural minds; history, gender, and social class; and the intersection of school culture with dominated and immigrant cultures. Part Three, Perspectives on Teaching Multicultural Education, includes chapters on teaching about racism; teaching about sexism; and teaching to protect and preserve cultures. All chapters include model multicultural lessons for elementary through college classes. These lessons serve a dual function—first, they can be used to help teach the content of the chapter, and second, elementary, middle school, and high school teachers can use these lessons in their own classes. Each chapter concludes with a “Personal Frames of References” section designed to engage students in relating multiculturalism to their own lives. New in the Fourth Edition: \*cultural differences in ways of seeing, knowing, and interrelating with the world; \*recent research findings from cross cultural psychology and the psychology of immigration; and \*methods for educating “multicultural minds”.

**The Oxen at the Intersection** Pattrice Jones, 2014-06-18 When Green Mountain College in Poultney, Vermont, announced that two oxen called Bill and Lou would be killed and turned into hamburgers despite their years of service as unofficial college and town mascots, pattrice jones and her colleagues at nearby VINE

Sanctuary offered an alternative scenario: to allow the elderly bovines to retire to the sanctuary. What transpired after this simple offer was a catastrophe of miscommunication, misdirection, and misinterpretations, as the college dug in its heels, activists piled on, and social media erupted. Part true-crime mystery, part on-the-ground reportage, and part sociocultural critique, *The Oxen at the Intersection* is a brilliant unearthing of the assumptions, preconceptions, and biases that led all concerned with the lives and deaths of these two animals to fail to achieve their ends. How and why the threads of this story unspooled, as Jones reveals, raises profound questions—most particularly about how ideas rooted in history, race, gender, region, and speciesism intersect and complicate strategy and activism, and their desired outcomes. In the end, notes Jones, we must always ask, Where's the body?

*Statistical Methods for the Analysis of Biomedical Data* Robert F. Woolson, William R. Clarke, 2011-01-25 The new edition adds a chapter on multiple linear regression in biomedical research, with sections including the multiple linear regressions model and least squares; the ANOVA table, parameter estimates, and confidence intervals; partial f-tests; polynomial regression; and analysis of covariance. \* Organized by problem rather than method, so it guides readers to the correct technique for solving the problem at hand.

Chance in Biology Mark Denny, Steven Gaines, 2002-09-23 Life is a chancy proposition: from the movement of molecules to the age at which we die, chance plays a key role in the natural world. Traditionally, biologists have viewed the inevitable noise of life as an unfortunate complication. The authors of this book, however, treat random processes as a benefit. In this introduction to chance in biology, Mark Denny and Steven Gaines help readers to apply the probability theory needed to make sense of chance events--using examples from ocean waves to spiderwebs, in fields ranging from molecular mechanics to evolution. Through the application of probability theory, Denny and Gaines make predictions about how

plants and animals work in a stochastic universe. Is it possible to pack a variety of ion channels into a cell membrane and have each operate at near-peak flow? Why are our arteries rubbery? The concept of a random walk provides the necessary insight. Is there an absolute upper limit to human life span? Could the sound of a cocktail party burst your eardrums? The statistics of extremes allows us to make the appropriate calculations. How long must you wait to see the detail in a moonlit landscape? Can you hear the noise of individual molecules? The authors provide answers to these and many other questions. After an introduction to the basic statistical methods to be used in this book, the authors emphasize the application of probability theory to biology rather than the details of the theory itself. Readers with an introductory background in calculus will be able to follow the reasoning, and sets of problems, together with their solutions, are offered to reinforce concepts. The use of real-world examples, numerous illustrations, and chapter summaries--all presented with clarity and wit--make for a highly accessible text. By relating the theory of probability to the understanding of form and function in living things, the authors seek to pique the reader's curiosity about statistics and provide a new perspective on the role of chance in biology.

Knowledge Engineering Gheorghe Tecuci, Dorin Marcu, Mihai Boicu, David A. Schum, 2016-09-08 This book presents a significant advancement in the theory and practice of knowledge engineering, the discipline concerned with the development of intelligent agents that use knowledge and reasoning to perform problem solving and decision-making tasks. It covers the main stages in the development of a knowledge-based agent: understanding the application domain, modeling problem solving in that domain, developing the ontology, learning the reasoning rules, and testing the agent. The book focuses on a special class of agents: cognitive assistants for evidence-based reasoning that learn complex problem-solving expertise directly from human experts, support experts, and nonexperts in problem solving and decision making, and teach their problem-solving expertise to students. A powerful learning agent shell, Disciple-EBR, is included with the book, enabling students, practitioners, and researchers to develop cognitive assistants rapidly in a wide variety of domains that require evidence-based reasoning, including intelligence analysis, cybersecurity, law, forensics, medicine, and education.

*Introduction to Biostatistical Applications in Health Research with Microsoft Office Excel and R* Robert P. Hirsch, 2021-02-17 The second edition of *Introduction to Biostatistical Applications in Health Research* delivers a thorough examination of the basic techniques and most commonly used statistical methods in health

research. Retaining much of what was popular with the well-received first edition, the thoroughly revised second edition includes a new chapter on testing assumptions and how to evaluate whether those assumptions are satisfied and what to do if they are not. The newest edition contains brand-new code examples for using the popular computer language R to perform the statistical analyses described in the chapters within. You'll learn how to use Excel to generate datasets for R, which can then be used to conduct statistical calculations on your data. The book also includes a companion website with a new version of BAHK add-in programs for Excel. This new version contains new programs for nonparametric analyses, Student-Newman-Keuls tests, and stratified analyses. Readers will also benefit from coverage of topics like: Extensive discussions of basic and foundational concepts in statistical methods, including Bayes' Theorem, populations, and samples A treatment of univariable analysis, covering topics like continuous dependent variables and ordinal dependent variables An examination of bivariable analysis, including regression analysis and correlation analysis An analysis of multivariate calculations in statistics and how testing assumptions, like assuming Gaussian distributions or equal variances, affect statistical outcomes Perfect for health researchers of all kinds, *Introduction to Biostatistical Applications in Health Research* also belongs on the bookshelves of anyone who wishes to better understand health research literature. Even those without a great deal of mathematical background will benefit greatly from this text.

Family Events Thomas Fletcher, 2022-05-18 An unprecedented exploration of the intersection of events and family studies, *Family Events* uses events as a lens through which to explore the concepts of families, family practices, family displays and family intimacies. *Family Events* explores the idea that how families come to be and, moreover, come to be defined as 'families' relies on events: whether that be via 'family events' – those which serve to celebrate being part of 'my' family – (e.g., birthdays, weddings, funerals), 'events experienced as a family' (e.g., a holiday or day trip) or 'events which impact families' (e.g., recession, war, global health emergency). *Family Events* brings together contributions from the social sciences, leisure and event studies which focus on a variety of different event contexts, including the life cycle, death and illness, sport, holidays, and community and religious festivals. *Family Events* offers a multitude of insightful perspectives on the intersection of events and family studies, and is a valuable resource for academics and students with a research interest in events, leisure and the family.

**Life-Span Developmental Psychology** Edward J. Callahan, Kathleen A. McCluskey, 2013-09-24 *Life-Span Developmental Psychology: Nonnormative Life Events* documents the proceedings of the 7th West Virginia University Life-Span Conference, held in Morgantown, WV, in May 1980. This volume

focuses on the effects of nonnormative life crises, those which occur to only certain individuals within a specific culture or group and are for the most part considered to be disruptive to the normal life course. Contributors were invited from a number of orientations and academic disciplines, ranging from traditional life-span psychologists to practicing clinical psychologists. The dynamic interplay of these diverse approaches results in a very exciting level of intellectual and practical stimulation, which is reflected in the chapters of this volume. The chapters are grouped topically to mirror the pairings of the conference presentations. Key topics covered include the dimensionalization of life events; adolescent pregnancy and parenthood; grief and adjustment for families dealing with sudden infant death; family violence; and impact of divorce on children.
