Mobile-First Journalism Steve Hill, Paul Bradshaw, 2018-10-10 Media publishers produce news for a full range of smart devices - including smartphones, tablets and watches. Combining theory and practice, *Mobile-First Journalism* examines how audiences view, share and engage with journalism on internet-connected devices and through social media platforms. The book examines the interlinked relationship between mobile technology, social media and apps, covering the entire news production process - from generating ideas for visual multimedia news content, to skills in verification and newsgathering, and outputting interactive content on websites, apps and social media platforms. These skills are underpinned with a consideration of ethical and legal concerns involving fake news, online trolling and the economics of mobile journalism. Topics include: understanding how mobile devices, social media platforms and apps are interlinked; making journalistic content more engaging and interactive; advice on how successful news publishers have developed mobile and social media strategies; adopting an approach that is entrepreneurial and user-centered; expert interviews with journalists, academics and software developers; learning key skills to launch and develop news websites, apps and social media outputs. *Mobile-First Journalism* is essential reading for journalism students and media professionals and of interest to those studying on courses in social and new media.

Android Apps with App Inventor 2 Karl-Hermann Rollke, 2018-01-23 With the development environment App Inventor 2 you can easily develop and test your own apps. The book is intended to help you get started with setting up the development environment right through to your own apps. It

is written for beginners who want to deal with app development, but can also be used for teaching purposes in schools or community colleges. It is a step-by-step guide that does not focus on the full description of the programming language, but uses examples to illustrate the capabilities of the development environment. It starts with setting up the environment and the Android device. It continues with simple apps, via variable concepts and control structures to more complex topics. Event-driven apps are developed, subroutines are handled and sensors are queried. Working with multiple screens is just as important as files and dialogs. The examples are chosen so that the topics with increasing difficulty are treated as systematically as possible. The examples are not too complex to be easily understood. They should serve as inspiration for own projects. A technically strict systematology and a complete description of the programming language is not intended to not overwhelm beginners.
