*Process Safety Management* ,2020-05-03 Hospital Respiratory Protection Program Toolkit - Resources for Respirator Program Administrators Introduction Unexpected releases of toxic, reactive, or flammable liquids and gases in processes involving highly hazardous chemicals have been reported for many years. Incidents continue to occur in various industries that use highly hazardous chemicals which may be toxic, reactive, flammable, or explosive, or may exhibit a combination of these properties. Regardless of the industry that uses these highly hazardous chemicals, there is a potential for an accidental release any time they are not properly controlled. This, in turn, creates the possibility of disaster. Recent major disasters include the 1984 Bhopal, India, incident resulting in more than 2,000 deaths; the October 1989 Phillips Petroleum Company, Pasadena, TX, incident resulting in 23 deaths and 132 injuries; the July 1990 BASF, Cincinnati, OH, incident resulting in 2 deaths, and the May 1991 IMC, Sterlington, LA, incident resulting in 8 deaths and 128 injuries. Although these major disasters involving highly hazardous chemicals drew national attention to the potential for major catastrophes, the public record is replete with information concerning many other less notable releases of highly hazardous chemicals. Hazardous chemical releases continue to pose a significant threat to employees and provide impetus, internationally and nationally, for authorities to develop or consider developing legislation and regulations to eliminate or minimize the potential for such events. Notice: This informational booklet is intended to provide a generic, non-exhaustive overview of a particular standards-related topic. This publication does not itself alter or determine compliance responsibilities, which are set forth in OSHA standards themselves and the Occupational Safety and Health Act. Moreover, because interpretations and enforcement policy may change over time, for additional guidance on OSHA compliance requirements, the reader should consult current and administrative interpretations and decisions by the Occupational Safety and Health Review Commission and the Courts. \* The version of this publication is as described above (this article is updated after each new

edition). Disclaimer: The use or appearance of United States Federal publications, text, images or logos on a non-Federal Government website does not imply or constitute endorsement of the distribution service.

*OSHA's Process Safety Management Standard* Mark McGuire Moran, 1995-06-01 Featuring 12 easy-to-use checklists for performing a self-audit of your compliance status, this handy reference helps you develop a PSM program that meets OSHA compliance obligations. In addition to providing you with a disk of WordPerfect files and forms that you can modify for your own business needs, this handbook includes a convenient, reader-friendly list of the Toxic and Reactive Chemicals regulated by the PSM standard and the amount of each that must be on hand in order to trigger the standard's coverage.

A Guide to Compliance for Process Safety Management/Risk Management Planning (PSM/RMP)

Frank R. Spellman, 1998-06-03 Establishing, maintaining and refining a comprehensive Process Safety Management (PSM) and Risk Management Program (RMP) is a daunting task. The regulations are complicated and difficult to understand. The resources available to manage your program are limited. Your plant could be the target of a grueling PSM and RMP compliance audit by OSHA and/or the EPA, which could scrutinize your facility according to their stringent audit guidelines. Ask yourself some questions. . . \* Is your municipal plant or industrial facility ready to meet new OSHA and EPA PSM/RMP regulations? \* Do you understand OSHA's and EPA's requirements? \* Do you know how OSHA/EPA are interpreting PSM/RMP requirements? \* Are you prepared for a possible audit? \* Is your existing PSM/RMP comprehensive, maintainable and cost-effective? If you answered no to any of these, you need the expert guidance provided by *A Guide to Compliance for Process Safety Management/Risk Management Planning (PSM/RMP)* In recent years, chemical accidents that involved the release of toxic substances have claimed the lives of hundreds of employees and thousands of others worldwide. In order to prevent repeat occurrences of catastrophic chemical incidents, OSHA and the USEPA have joined forces to bring about the OSHA Process Safety Management Standard (PSM) and the USEPA Risk Management Program (RMP). Chemical disaster situations can occur due to human error in system operation and/or a malfunction in system equipment. Other emergency situations that must also be considered and planned for include fire, floods, hurricanes, earthquakes, tornadoes, snow/ice storms, avalanches, explosions, truck accidents, train derailments, airplane crashes, building collapses, riots, bomb threats, terrorism, and sabotage. Be prepared! \* Determine the differences and similarities between OSHA's PSM and EPA's RMP regulations \* Survey your facility to

determine your needs \* Plug your site-specific data into regulation templates \* Prepare your data records for your PSM compliance package \* Calculate your Worst Case scenarios \* Assemble a viable PSM program in a logical, sequential, and correct manner \* Supervise program implementation elements with the overall management system

This user friendly, plain English, straightforward guide to new EPA and OSHA regulations describes, explains and demonstrates a tested, proven, workable methodology for installation of complete, correct safety and risk programs. It provides the public administrator, plant manager, plant engineer, and organization safety professionals with the tool needed to ensure full compliance with the requirements of both regulations. Those with interests in HazMat response and mitigation procedures will also find it of use. This guidebook is designed to be applicable to the needs of most operations involved in the production, use, transfer, storage, and processing of hazardous materials. It addresses Process Safety Management and Risk Management Planning for facilities handling hazardous materials, and describes the activities and approach to use within U.S. plants and companies of all sizes.

From the Author This guidebook is designed to enable the water, wastewater, and general industry person who has been assigned the task of complying with these new rules to accomplish this compliance effort in the easiest most accurate manner possible. A Guide to Compliance for Process Safety Management/Risk Management Planning (PSM/RMP) is user-friendly. This How-To-Do-It guide will assist those who are called upon to design, develop, and install PSM and RMP systems within their companies or plants. It describes, explains, and demonstrates a proven methodology: an example that actually works and has been tested. More than anything else, this guidebook really is a Template. It provides a pattern that can be used to devise a compliance package that is accurate. Simply stated: like the standard template, this guidebook can provide the foundation, the border, the framework from which any covered organization's PSM and RMP effort can be brought into proper compliance. The user simply plugs in site specific information into the model presented in this guidebook. This guidebook first shows that PSM and RMP are similar and are interrelated in many ways and different in only a few ways. Many of the processes listed in PSM are also listed in RMP; the additional RMP processes are in industry sectors that have a significant accident history. Along with showing the similarities and interrelationships between PSM and RMP, the requirements of RMP that are in addition to those listed in PSM are discussed. This guidebook also discusses the RMP requirement for off-site consequence analysis and the methodology that can be utilized in performing it. If the PSM project team follows this format, it will be able to assemble a viable PSM program in a logical, sequential, and correct manner.
