A Rice Village Saga Yūjirō Hayami, 田口 昌男, Masao Kikuchi, 2000 This detailed case study explores the dramatic economic and social changes that the rice belt of Laguna Province has experienced in the last quarter-century. Besides major advances in rice technology, increasing population pressure, land reform programs, growing

infrastructure, and urban economic activities have accelerated the pace of change. Utilizing a unique data set built from numerous surveys from 1966 to 1997 in a typical Laguna village, the authors illustrate a pattern of socioeconomic development shared by irrigated rice areas throughout Asia.

Hexagon (KH-9) Mapping Camera Program and Evolution Maurice G. Burnett, 2012 The United States developed the Gambit and Hexagon programs to improve the nation's means for peering over the iron curtain that separated western democracies from east European and Asian communist countries. The inability to gain insight into vast denied areas required exceptional systems to understand threats posed by US adversaries. Corona was the first imagery satellite system to help see into those areas. Hexagon began as a Central Intelligence Agency (CIA) program with the first concepts proposed in 1964. The CIA's primary goal was to develop an imagery system with Corona-like ability to image wide swaths of the earth, but with resolution equivalent to Gambit. Such a system would afford the United States even greater advantages monitoring the arms race that had developed with the nation's adversaries. The Hexagon mapping camera flew on 12 of the 20 Hexagon missions. It proved to be a remarkably efficient and prodigious producer of imagery for mapping purposes. The mapping camera system was successful by every standard including technical capabilities, reliability, and capacity.

Industrial Sensors and Controls in Communication Networks Dong-Seong Kim, Hoa Tran-Dang, 2018-12-11 This informative text/reference presents a detailed review of the state of the art in industrial sensor and control networks. The book examines a broad range of applications, along with their design objectives and technical challenges. The coverage includes fieldbus technologies, wireless communication technologies, network architectures, and resource management and optimization for industrial networks. Discussions are also provided on industrial communication standards for both wired and wireless technologies, as well as for the Industrial Internet of Things (IIoT). Topics and features: describes the FlexRay, CAN, and Modbus fieldbus protocols for industrial control networks, as well as the MIL-STD-1553 standard; proposes a dual fieldbus approach, incorporating both CAN and ModBus fieldbus technologies, for a ship engine distributed control system; reviews a range of industrial wireless sensor network (IWSN) applications, from environmental sensing and condition

monitoring, to process automation; examines the wireless networking performance, design requirements, and technical limitations of IWSN applications; presents a survey of IWSN commercial solutions and service providers, and summarizes the emerging trends in this area; discusses the latest technologies and open challenges in realizing the vision of the IIoT, highlighting various applications of the IIoT in industrial domains; introduces a logistics paradigm for adopting IIoT technology on the Physical Internet. Translation Technique in the Peshitta to Jeremiah Gillian Greenberg, 2021-11-15 This book presents an analysis of translation technique, defining and measuring areas of literalness and of freedom, and discussing the evident acceptability of a non-literal approach, in both the original translation and later editorial work, to relevant communities. Because the Book of Jeremiah is so long, a quantitative analysis was valuable, showing: preservation of the sense of the Vorlage; freedom in selection of lexical equivalents even for important words such as sin and in making numerous additions in pursuit of precision; and a similar approach by later editors. Passages which are not represented in the translation despite their presence in the Hebrew Bible, and sometimes also in the Septuagint, are analysed, showing their value in illumination both the development of the Hebrew Bible itself from a number of earlier texts, and the precise wording of the text from which the Syriac translator worked. The strategies adopted to cope with the translation of particularly difficult Hebrew are analysed: these include taking guidance from the Septuagint, from other parts of the Hebrew Bible, and guesswork. Apart from its value to Peshitta scholars and Syriac specialists, the book is useful to biblical scholars and textual critics in general.

Trends in Spatial Analysis and Modelling Martin Behnisch, Gotthard Meinel, 2017-10-24 This book is a collection of original research papers that focus on recent developments in Spatial Analysis and Modelling with direct relevance to settlements and infrastructure. Topics include new types of data (such as simulation data), applications of methods to support decision-making, and investigations of human-environment data in order to recognize significance for structures, functions and processes of attributes. Research incorporated ranges from theoretical through methodological to applied work. It is subdivided into four main parts: the first focusing on the research

of settlements and infrastructure, the second studies aspects of Geographic Data Mining, the third presents contributions in the field of Spatial Modelling, System Dynamics and Geosimulation, and the fourth part is dedicated to Multi-Scale Representation and Analysis. The book is valuable to those with a scholarly interest in spatial sciences, urban and spatial planning, as well as anyone interested in spatial analysis and the planning of human settlements and infrastructure. Most of the selected papers were originally presented at the "International Land Use Symposium (ILUS 2015): Trends in Spatial Analysis and Modelling of Settlements and Infrastructure" November 11-13 2015, in Dresden, Germany.

Electronic Structure of Semiconductor Heterojunctions Giorgio Margaritondo, 2012-12-06 E se non che di cid son vere prove A nd were it not for the true evidence Per piti e piti autori, che sa, ra. nno Of many authors who will be Per i miei versi nominati altrove, Mentioned elsewhere in my rhyme Non presterei alla penna 10. mana I would not lend my hand to the pen Per notal' cid ch'io vidi, can temenza And describe my observations, for fear ehe non fosse do. altri casso e van 0; That they would be rejected and in vane; Mala lor chiara. e vera. esperienza But these authors' clear and true experience Mi assicura. nel dir, come persone Encourages me to report, since they Degne di fede ad ogni gra. n sentenza. Should always be trusted for their word. [From Dittamondo, by Fazio degli Uberti] Heterojunction interfaces, the interfaces between different semiconducting materi als, have been extensively explored for over a quarter of a century. The justifica tion for this effort is clear - these interfaces could become the building blocks of lllany novel solid-state devices. Other interfaces involving semiconductors are al ready widely used in technology, These are, for example, metal-semiconductor and insulator-semiconductor junctions and h0lllojunctions. In comparison, the present applications of heterojunction int. erfaces are limited, but they could potentially bec0lne lnuch lllore ext. ensive in the neal' future. The path towards the widespread use of heterojunctions is obstructed by several obstacles

TOF Range-Imaging Cameras Fabio Remondino, David Stoppa, 2013-04-09 Today the cost of solid-state two-dimensional imagers has dramatically dropped, introducing low cost systems on the market suitable for a variety of applications, including both industrial and consumer products. However, these systems can capture only a two-dimensional projection (2D), or intensity map, of the scene under observation, losing a variable of paramount importance, i.e., the arrival time of the impinging photons. Time-Of-Flight (TOF) Range-Imaging (TOF) is an emerging sensor technology able to deliver, at the same time, depth and intensity maps of the scene under observation. Featuring different sensor resolutions, RIM cameras serve a wide community with a lot of applications like monitoring, architecture, life sciences, robotics, etc. This book will bring together experts from the sensor and metrology side in order to collect the state-of-art researchers in these fields working with RIM cameras. All the aspects in the acquisition and processing chain will be addressed, from recent updates concerning the photo-detectors, to the analysis of the calibration techniques, giving also a perspective onto new applications domains.
