Mesoscale Analysis of Existing Meteorological Network Data ,1963 A study was conducted to investigate means for adapting existing airways and synoptic data to meso scale analysis as a basis for (a) Improving short term terminal forecasts and, (b) Preparation of a manual for local area analyses which could be used to facilitate the preparation of 0-3 hour terminal forecasts. The program involved investigation of selected weather situations at six terminals which were chosen on the basis of the importance of the terminal, good geographic representation, and adequacy of the existing network of airways observing stations. A basic hypothesis under test was that the high time resolution of the recording instruments could be used to compensate for the poor spatial resolution of the existing airways network. The investigation was, therefore, structured to determine whether tendency-type information which could be transmitted by teletype could be employed usefully to sharpen the analysis and improve the forecast, and to devise and employ means for substituting the high time resolution of most meteorological observing systems for the poor spatial resolution of same. Possibility of Long Range Precipitation Forecasting for the Hawaiian Islands

Samuel B. Solot,1948 In order to establish a meteorological forecasting system, it is necessary to find a direct relationship between measurable physical states of the atmosphere and the end product, the weather element to be forecast. The long range forecaster is quite limited in his choice of physical parameters. In fact only the very large-scale dynamics of the atmosphere which can be expressed in terms of mean pressure patterns are amenable to long range analysis. Thus the problem reduces to finding a link between mean planetary pressure patterns and precipitation in the Hawaiian Islands

Searching the Skies David Frank Winkler,1997 Originally published in 1997, this hitherto hard-to-find study examines the impact that construction of radar stations and command facilities had on the American landscape. With accompanying black and white photographs throughout, the author explores patterns, themes, and trends that created, influenced, and formed the backdrop to the Cold War defense radar program. This study provides an in-depth look at the radar systems, a state by state listing of the infrastructure that supported the systems, and an extensive bibliography. This historic content can be used to understand and evaluate properties associated with America's detection and command and control system.

Engineering a Safer World Nancy G. Leveson,2012-01-13 A new approach to safety, based on systems thinking, that is more effective, less costly, and easier to use than current techniques. Engineering has experienced a technological revolution, but the basic engineering techniques applied in safety and reliability engineering, created in a simpler, analog world, have changed very little over the years. In this groundbreaking book, Nancy Leveson proposes a new approach to safety—more suited to today's complex, sociotechnical, software-intensive world—based on modern systems thinking and systems theory. Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept, and testing her new model extensively on real-world examples, Leveson has created a new approach to safety that is more effective, less expensive, and easier to use than current techniques. Arguing that traditional models of causality are inadequate, Leveson presents a new, extended model of causation (Systems-Theoretic Accident Model and Processes, or STAMP), then shows how the new model can be used to create techniques for system safety engineering, including accident analysis, hazard analysis, system design, safety in operations, and management of safety-critical systems. She applies the new techniques to real-world events including the friendly-fire loss of a U.S. Blackhawk helicopter in the first Gulf War; the Vioxx recall; the U.S. Navy SUBSAFE program; and the bacterial contamination of a public water supply in a Canadian town. Leveson's approach is relevant even beyond safety engineering, offering techniques for “reengineering” any large sociotechnical system to improve safety and manage risk.
