Organophosphorus Chemistry D W Hutchinson,B J Walker,2007-10-31 Organophosphorus Chemistry provides a comprehensive annual review of the literature. Coverage includes phosphines and their chalcogenides, phosphonium salts, low coordination number phosphorus compounds, penta- and hexa-coordinated compounds, tervalent phosphorus acids, nucleotides and nucleic acids, ylides and related compounds, and phosphazenes. The series will be of value to research workers in universities, government and industrial research organisations, whose work involves the use of organophosphorus compounds. It provides a concise but comprehensive survey of a vast field of study with a wide variety of applications, enabling the reader to rapidly keep abreast of the latest developments in their specialist areas. Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three, volumes covering Inorganic, Organic and Physical Chemistry. For more general coverage of the highlights in chemistry they remain a 'must'. Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis along with their titles; some have been combined under a new name whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

Osutaka: A Chronicle of Loss In the World's Largest Single Plane Crash Christopher

Hood,2018-03-30 The loss of a loved one is a traumatic event. If the loved one is your child, the emotions are further tested. Imagine having to cope with all of these feelings when also adding into the mix the challenges when the death happens on the other side of the planet in a country with a different language and culture. This is what one man had to face when his son died in the world's largest single plane crash. Peter Mathews lost his son Kimble, who was travelling with his fiancée Masako Nishiguchi, in the flight JL123 crash on 12 August 1985. From the time of the first phone call through his trip to Japan until his return back to the UK, Peter kept a diary and took photographs. Using these materials as a basis, this book provides an amazing insight into the events

of August 1985. The book also includes details of the experiences and lessons learned by the JAL employee, Keith Haines, who was assigned to accompany the Mathews family to Japan. Their story is as relevant today as it was in 1985.
