Basic Aspects of Property Market Research (Revised Edition) Abdul Hamid Mar Iman ,2012 Property market research basically deals with investigation and information generation related to all aspects of property business. It systematically and objectively scrutinizes the various components of human environment and property-related activities; examines their nature, issues, and problems; collects the relevant data; analyzes them in relation to certain specified issues, problems, and objectives; make conclusions; and documents the acquired information for firm's decision-making purposes. As property market research helps well-informed decision-making, its scope can be very diverse. However, this book has chosen to discuss the fundamental aspects of property market research with a view to address all those aspects mentioned above. The chapters are so arranged to cover the concept of research, basic understanding about property market, its environment, consumer's behaviour, location and productivity analysis, and the main elements of property market analysis.

Quantitative Research for the Qualitative Researcher Laura M. O'Dwyer,James A. Bernauer,2013-07-19 Quantitative Research for the Qualitative Researcher is a concise, supplemental text that provides qualitatively oriented students and researchers with the requisite skills for conducting quantitative research. Bernauer provide ample support and guidance to prepare readers both cognitively and attitudinally to conduct high quality research in the quantitative tradition. Real Estate Market Research and Analysis C. Nygaard,Chris Leishman,2003-04-24 Real estate market research and analysis often draws on theory and techniques borrowed from other disciplines; in particular economics, finance and geography. Few textbooks recognise this, which makes Real Estate Market Research and Analysis a unique and innovative read. This accessible text provides a general overview of research philosophy and research practise in the real estate economics discipline. A range of applied quantitative empirical methods, commonly used in both academic and applied real estate market research and analysis, are examined as well as selected research-based studies which demonstrate how these methods are applied. Recent trends and developments in the evolving real estate economics research agenda are also explored. This book is aimed at both undergraduate students and practitioners in the commercial property and real estate sector. It is essential reading for modules on general practice surveying. It sets out the means and methods by which a commercial property rent model should be constructed and estimated, and provides a helpful guide to good property market research practise. Key features include; a Foreword by Dr Craig Watkins at the University of Aberdeen, and a Glossary of property and economic research terms.

Access to Non-Summary Clinical Trial Data for Research Purposes Under EU Law Daria Kim,2021-10-19 This book draws a unique perspective on the regulation of access to clinical trial data as a case on research and knowledge externalities. Notwithstanding numerous potential benefits for medical research and public health, many jurisdictions have struggled to ensure access to clinical trial data, even at the level of the trial results. Pro-access policy initiatives have been strongly opposed by research-based drug companies arguing that mandatory data disclosure impedes their innovation incentives. Conventionally, access to test data has been approached from the perspective of transparency and research ethics. The book offers a complementary view and considers access to individual

patient-level trial data for exploratory analysis as a matter of research and innovation policy. Such approach appears to be especially relevant in the data-driven economy where digital data constitutes a valuable economic resource. The study seeks to define how the rules of access to clinical trial data should be designed to reconcile the policy objectives of leveraging the research potential of data through secondary analysis, on the one hand, and protecting economic incentives of research-based drug companies, on the other hand. Overall, it is argued that the mainstream innovation-based justification for exclusive control over the outcomes of research and development can hardly rationalise trial sponsors' control over primary data from trials. Instead, access to such data and its robust analysis should be prioritised.
